FOREWORD

Chama district Integrated Development Plan (IDP) is a developmental framework premeditated to run from 2025 to 2035 with the theme to have an Interlinked, socio-economically sound and environmentally sustainable district by 2040 for the sole purpose of poverty reduction.

I would like to express special gratitude to His Excellence, the President of the Republic of Zambia Mr. Hakainde Hichilema for the support by allowing us to use part of the administrative component under CDF for the formation of the Integrated Development Plan (IDP). This in itself is one of the indicators that he has continuously shown to ensure that the district becomes a prosperous district by 2030 through social and economic empowerment of all the sectors of development.

We are more than delighted as a district to be beneficiaries of the support rendered in Eastern Province by USAID Local Impact Governance Project, World Bank through the Transforming Landscapes for Resilience and Development Project (TRALARD) during the Preparation of this important document.

With much gratitude, I wish to thank the Ministry of Finance and National Planning as well as the Ministry of Local Government and Rural Development for the tremendous technical and financial support rendered throughout the draft process. I would also like to thank the Honorable Members of Parliament, Councilors, the District Commissioner and the Heads of Government Departments, the Council Secretary and the entire IDP team for working diligently in the preparation of the district Integrated Development Plan which will be used as a tool to improve the livelihoods of the community. In addition, I wish to thank

all seven traditional leaders for playing an active role in the development of this document.

The document describes the historical perspective of the district and the governance structure: central government, local government and traditional leadership. Various issues have been captured during the consultative process in the Planning Survey and Issues Report that culminated into the Development Framework where the development agenda has been set. Therefore, the various outlined interventions, strategies and priorities are set targets to help chart a course and guide the district to the much-needed development. I therefore encourage all Departments, Line Ministries, traditional leaders and other stakeholders to help us market the set agenda as outlined in this document and support each other for the betterment of the people of Chama.

I am pleased to invite all Chama residents, elected leaders, development partners and employees of the Government to work together towards timely realization of the targets we have set for ourselves in this Plan, so that we can achieve development and growth as a district.

I therefore call upon everyone to passionately own the document and continue to contribute positively toward the attainment and realization of vital developmental indicators for sustainable development. This will only be done through heavily capitalizing on our natural resources, farmers, youths and women as well as promoting good and participatory governance.

Cllr. Gift Kumwenda

Council Chairperson

Chama Town Council

ACKNOWLEDGEMENT

It is with great pleasure that I present the Integrated Development Plan (IDP) for Chama District, prepared in accordance with the Zambian Urban and Regional Planning Act of 2015. This plan represents a vital roadmap for the sustainable development of the district, focusing on inclusive growth, effective land use, and coordinated development across all sectors. As guided by the aforementioned Act of Parliament, this vital development document is to be a guide for the district's development over the course of the next ten years and will be subject to review after five.

Located in a game management area, Chama District is rich in both natural and human resources, but it faces unique challenges, including infrastructural limitations and service delivery gaps. The IDP has been developed through a collaborative process involving key stakeholders from government, the private sector, and the community, ensuring that it reflects the collective vision of the people of Chama. Not only does this document highlight the challenges faced, it also incorporates the opportunities that Chama possesses to become an Interlinked, Socio-Economically sound and environmentally sustainable district by 2040.

This plan provides a comprehensive framework for addressing issues related to housing, transportation, environmental management, and socio-economic development, while aligning with national goals and policies. It emphasizes the importance of sustainable practices that preserve the environment for future generations and recognizes the need to foster equitable development that benefits all residents of the district.

The successful implementation of this IDP will require the continued commitment and cooperation of all stakeholders. Together, we can transform Chama District into a thriving, inclusive, and environmentally sustainable community.

I urge all partners to embrace this plan and work diligently towards realizing its vision for the future of Chama District.

Yobe Lolwe Goma

District Commissioner

Chama District

EXECUTIVE SUMMARY

The Chama District Integrated Development Plan (IDP) outlines a strategic vision for sustainable development over the next decade, aiming to guide the district's development toward an interlinked, socio-economically sound and environmentally sustainable district by 2045. As prescribed by Urban and Regional Planning Act, Chama District's IDP is comprised of planning survey and issues report, a development framework, an implementation programme, a report on public consultation, as well as appropriate diagrams and plans.

As the foundation of the document, the planning survey and issues report comprises of the description of Chama as a district; it speaks to matters of the district's demographic status, settlement patterns, land use, and various impact assessments. In addition, this component includes sector-based thematic analyses that help depict the district's performance and current development status. It brings out the issues relating to the implementation of national policies and programmes, accessibility, availability, and quality of services provided in the district. Additionally, it also covers issues to do with environmental impacts and social aspects of the communities across the district. It is on this foundation that the development framework is developed.

Based on the planning survey and issues report, the development framework is basically the remedies to the challenges faced by the district; This component defines the district's goals, objectives and strategies. Following a similar structure, the development framework presents these goals and objectives in a thematic sector-based format outlining the different types of challenges faced. This is then concluded with a summary of cross-sectoral goals, objectives, strategies, and programmes to be implemented over the prescribed planning period. Furthermore, the gathered information becomes part of the key ingredient that

speaks to the depiction of spatial development on the ground in the spatial development framework. Subsequently, the spatial development framework becomes the platform for financial allocation or in other words, the implementation programme.

The implementation programme helps define the roles and responsibilities of all stakeholders both internal and external to the district; In this component, the document covers the capital investment programme, the local authority's financial plan, and lastly the monitoring and evaluation plan.

Ultimately, the IDP is the collective composition of these components brought to life by the synergetic efforts of all stakeholders in the district. It is my sincere desire to witness the actualization of the district's vision for a better Chama district come 2035.

PART ONE – INTRODUCTION

Introduction and Background

The Chama Integrated Development Plan is a comprehensive framework guiding the socio-economic transformation of the rural district. Located in the heart of Eastern Province, Chama district is endowed with fertile soils and favorable climate conditions, making agriculture the backbone of the local economy. Rain-fed agriculture, in particular, plays a vital role in the livelihoods of residents, with maize such as rice, cotton, maize, groundnuts and beans being the primary source of income. As the largest district in Eastern Province, Chama boasts an unparalleled natural heritage, with a significant portion of its terrain comprising the pristine wilderness of the Upper Luangwa Valley. This strategic location, adjacent to the renowned North Luangwa National Park, presents both opportunities and challenges for sustainable development.

The opportunities and challenges include the following;

1. Tourism potential: Upper Luangwa Valley's unique biodiversity and wildlife populations offer significant tourism potential.
2. Job creation: Tourism and conservation efforts create employment opportunities for local communities.
3. Conservation benefits: The Game Management Area help protect biodiversity, maintaining ecological balance and preserving natural resources.
4. Revenue sharing: Communities can benefit from revenue sharing schemes with tourism operators and conservation organizations.
5. Cultural preservation: GMAs can promote cultural heritage and traditional practices related to wildlife management and opportunities for

community-based tourism initiatives, promoting cultural exchange and local economic benefits.

6. Research and education: GMAs can serve as outdoor laboratories for research, education, and skills development.
7. Community-based natural resource management (CBNRM): Empowers local communities to manage natural resources, promoting sustainable livelihoods.

However, the district faces significant development challenges. The poor road network, exacerbated by the rainy season, severely limits accessibility to most parts of the district, hindering economic growth and service delivery. The district's rugged terrain and limited infrastructure hinder access to markets, social services, and economic opportunities.

Other challenges related to Chama being located in a GMA include the following;

1. Human-wildlife conflict: Competition for resources, space, and livelihoods lead to conflicts between humans and wildlife.
2. Limited land use: GMA has imposed restrictions on land use, potentially limiting agricultural expansion and development.
3. Security concerns: Poaching, habitat destruction, and human safety concerns require significant resources and effort.
4. Economic benefits distribution: Ensuring fair distribution of benefits among local communities, tourism operators, and conservation organizations.
5. Climate change: Impacts on wildlife populations, habitats, and ecosystem balance.
6. Policy and legislative frameworks: Complexities in laws, regulations, and policies governing GMAs are too rigid.

To address these challenges and unlock the district's potential, this IDP prioritizes:

1. Agricultural development and diversification
2. Infrastructure development (roads, storage facilities, and market access)
3. Environmental conservation and sustainable natural resource management
4. Improved access to social services (health, education, and water)
5. Enhanced economic opportunities through value addition and entrepreneurship
6. Promote citizen participation in local governance
7. Foster partnerships and collaborations among stakeholders to drive development

Through this IDP, we envision an interlinked, socio-economically sound and environmentally sustainable Chama District, where residents enjoy improved livelihoods and the natural resources are harnessed for the benefit of all.

Definition of the IDP Area

The proposed IDP Area for the Chama shall cover the whole District as narrated in the Chama District boundary as defined in the Provincial and District Boundaries Act Cap 286 of the Laws of Zambia.

District location map

Chama is one of the 15 districts in Eastern Province of the Republic of Zambia. The largest district in Zambia's Eastern Province, Chama District, has its headquarters located at Chama, Kamphemba ward. It encompasses a sizable wilderness situated in the Upper Luangwa valley, northeast of the North Luangwa National Park. It is composed of the Chama North and Chama South constituencies. It is situated between longitudes 31.450 and 32.300 East and latitudes 13.800 and

14.450 South with altitudes from 350 m to 640 m above sea level and the escarpment rises to 1,200 m above sea level.

The district stretches between latitudes 100 15' to 120 10' South and longitude 320 40' to 330 10' East. Chama is a transit town, linking Eastern Province and Malawi to Muchinga, Northern and Luapula Provinces. The district's town Centre is located about 940 KM away from the Capital City of Zambia (Lusaka), about 332 KM away from the Provincial Headquarters Chipata, about 450 KM away from Nakonde the border town and about 156 KM away from Lundazi.

Chama District is surrounded by six (6) Districts and an international boundary on its Eastern part where it shares a long stretch of border with Malawi, on the Northern part Chama District shares its border with Mafinga, Isoka and Chinsali Districts, on its western part Chama borders Shiwang'andu District and Mpika District on the South-Western part while on its Southern part the district shares its border with Chasefu District.

The notable features in the district include, Muchinga Escarpment in the East, Nyika Plateau in Mbazi Ward, Hot springs dotted around the district, the North Luangwa National Park, and Luangwa River that passes across the district. Figure 1 shows the location of the district in relation to the Nation and the Province.

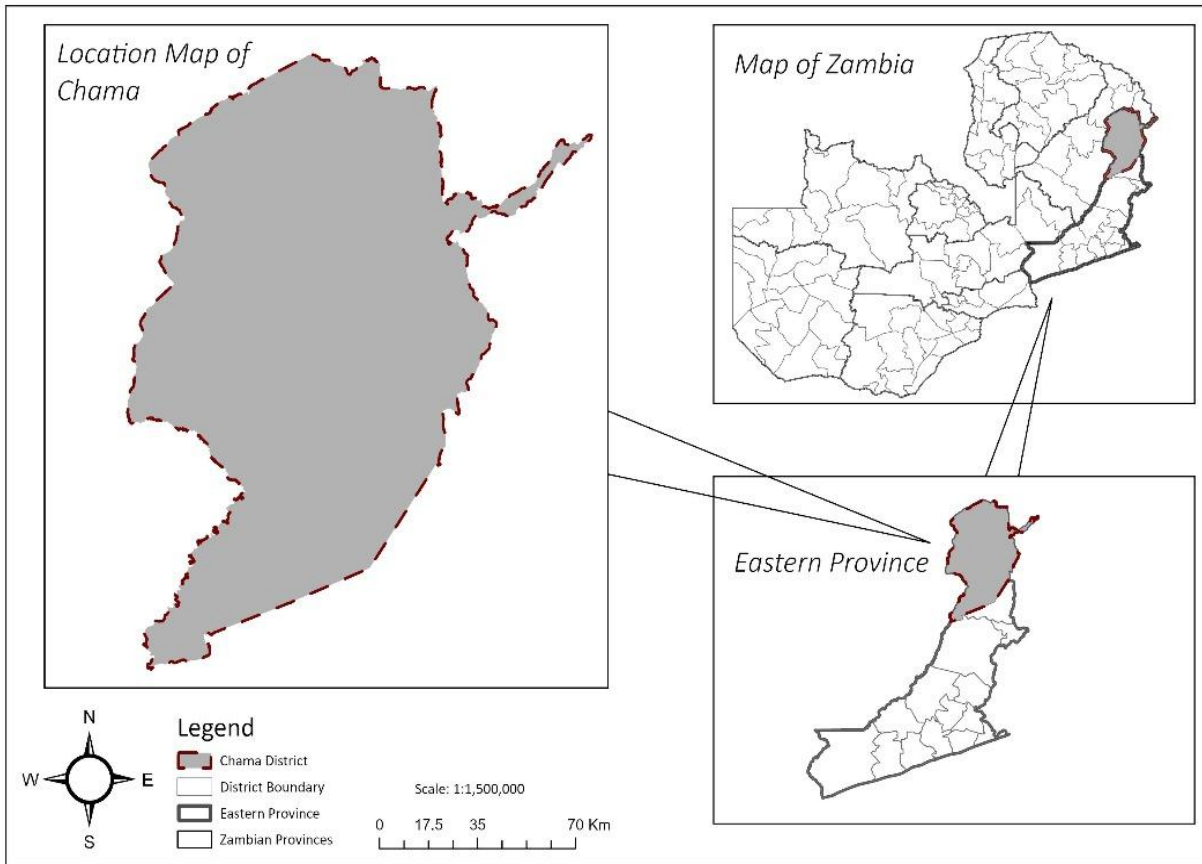

Figure 1: Location of Chama district in Eastern Province

Source: Department of Physical Planning, EPPU 2023

Climatic Condition

The district lies in Agro-ecological Region II, which is characterized by low rainfall. The rainfall pattern is controlled by the movements of the Inter-Tropical Convergence Zone and increases from south to north. Therefore, the district is characterized by the tropical continental type of climate with three distinct seasons, i.e., hot rainy season from late November to April; a cool-dry season, from May-August; and a hot - dry season, from September to early November. The mean annual rainfall is in the range of 700 - 900 mm. The district often experiences frequent drought and floods.

Table 1: Rainfall Pattern

Chama Rainfall 2016/17		
	Rain (mm)	Eff. Rain (mm)
September	0.4	0.4
October	16	16
November	87.07	87.07
December	192.96	192.96
January	0	0
February	195	195
March	137	137
April	54	54
May	3.07	3.07
June	0	0
July	0	0
August	0.1	0.1

Soils

The sub-soil is clayey though covered with a thin layer of sand on top. Loamy soil is found in the areas along riverbanks. The wide spread clay soil becomes easily waterlogged when it rains continuously for a few days and dries up quickly due to excessive heat. However, the water logging areas provide suitable rice growing paddies. The Loamy soil along the river banks provides fertile areas for farming. Unfortunately, crops are usually washed away during the years of excessive rainfall.

Topography

The relief features of Chama District can be divided into three categories and these include land below 900 meters above sea level and land between 900 meters and 1200 meters and above 1200 above sea level. The first category

defines the lowest area of the district, which is land below 900 meters above sea level found along the valley and is bordered by steep slopes of the escarpment with many hills and winding tributaries breaking the country side along the escarpment. The second category describes land between 900 and 1200 meters above sea level and this refers to land between the high land watershed areas and the low land river valleys, which can generally be described as gently undulating plateau with large areas of flat surface land cut into by the Luangwa River and its tributaries valley in the south, east and west. Thirdly, is the land over 1200 meters above sea level, in this category, there are two high lands; the first area separates the Luangwa River and its tributaries from the rivers that flow towards Lake Malawi. Secondly, the Mafinga Hills, which rise to the height of 2,164 meters and the Nyika Plateau (2100) form part of the high plateau that stretches east wards into Malawi. The second highland area in the west separates Luangwa River and its tributaries from the Chambeshi River and its tributaries that drain in the swamps of Lake Bangweulu.

Hydrology

The Luangwa River that flows north to south longitudinally cuts the district almost into two equal halves and has the following tributaries; Luumbu, Kalinkhu, Mbwata, Kamphemba in the north and Bazimu, Lupamazi, Lunzi, Luelo, Luvila and Lundazi in the south. Most of them dry up in the dry season leaving isolated pools of water along river-beds.

Vegetation

There are three (3) main types of predominant vegetation under Chama District namely; (a) Mopani woodlands, which are infertile and found on poor sandy loam soil; (b) Miombo woodlands, found on hilly highlands with moderate fertile soils and (c) Munga, locally known as Musangu usually found on fertile alluvial soils

where human settlements are mostly concentrated. However, it is worth to note that there are also minor occurrences constituting watersheds and small patches of palm communities and traces of grass land found along the river banks and surrounding areas.

The district has four (4) gazetted National forests and 1 local forest covering a total area of 333, 566 Hectares. These include; Lundazi, Makutu, Chire, Fibale, and Pondo Forest respectively. Customary Land has a large portion of open forest whose size is not yet known. However, a large portion of the district is a valley where the Luangwa North National Park is situated.

Flora and Fauna

The district is predominantly covered by three vegetation types, the Mopane woodlands, the Miombo woodlands and the Munga. However there exists a mosaic of vegetation types on the valley floor constituting of Riparian, Montane, Munga and Itigi. Other vegetation types in the district include riverine, shrublands, grasslands and riverine vegetation. The riverine vegetation found along the rivers, streams and lagoons and dambos usually have a mixture of such as *Faidaherbia albida*, *pilistigma thorniigii* (musekese), and *Acasia* species. There are also patches of palm communities.

Jachmann et al (1994) and Jachmann (1998) have established that Luangwa valley contains some of the highest densities of larger mammals in Zambia. A total of 110 mammal species exist that include seven species near endemic to the area. These include: elephants, eland, hippos, buffalo, zebra, waterbuck, roan, bushbuck, bushpig, warthog, kudu, puku, impala, grysbok, oribi, common duiker; lion, leopard, spotted hyena, wild dog, greater kudu, sable antelope; among the primates: baboon, vervet monkey, night ape and bush baby. Other fauna includes birds, reptiles, fish and invertebrates.

Governance and General Administration

Chama District has three tier governance systems namely; Traditional, Local Government and Central Government (district administration) which all coordinate and propagate district development and general welfare of the people. However, all these governance structures are streamlined through various policies and guidelines to operate in an integrated approach for the common good of national development.

Traditional Leadership System

Chama District has seven (7) Chiefs namely; Senior Chief Kambombo, Chief Lundu, Chief Chibale, Chief Chikwa, Chief Tembwe, Chief Chifunda and Chief Mulilo who are responsible for enforcing customary law through various committees of advisers and village headmen. The main inhabitants of the district are the Senga speaking people. The district also boasts of the Bemba and Namwanga speaking people who are found in the northern part of Chama, and Tumbuka speaking people on the southern part.

Local Government System

Chama Town Council is responsible for the Local Government administration system. The Council was established in 1900s after the abolishment of Rural Councils following an integrated Local Administration Act of 1980 that saw the establishment of all District Councils in the Country. Furthermore, in 2012 Chama District was realigned to Muchinga province from Eastern Province after the creation of Muchinga Province under the Patriotic Front administration. Administratively, Chama District was taken back to Eastern Province under the United Party for National Development in 2021. Chama district has two (2) constituencies named Chama North which is demarcated into thirteen (13)

administrative Wards and Chama South Constituency with eleven (11) wards, with each Ward coordinated by an Area Councilor who is elected every 5 years in accordance with the Local Government electoral system in Zambia.

The total twenty-four (24) Ward Councilors constitute a Council headed by the Council Chairperson forming the district legislative structure responsible for; overseeing Programmes and projects in the district, making by – laws, administering the district and performing other prescribed functions. The Council is supported by management headed by the Council Secretary who is supported by technical and administrative personnel responsible for general administration and policy interpretation and implementation.

The twenty-four (24) wards are subdivided into 91 zones with each ward having a sub-district governance structure called Ward Development Committee (WDC) which acts as a link between local communities and the Local Authority (LA). The WDCs are non-political and members are democratically elected by the community. These are headed by Chairpersons who are assisted by executive members and zonal representatives. This decentralized and democratized level of governance has been facilitating high level of consultation and active participation of local people in the development process in the district. Like other constituencies Chama North and Chama South Constituencies' developmental aspirations are represented by two area Member of Parliaments (MPs) in the Legislature arm of governance at national level.

District Administration

The District Administration is headed by the District Commissioner who co-ordinates Central Government functions and all developmental activities as well as harmonizing functions with those of local authorities and other line ministries in order to ensure effective implementation of developmental Programmes in the

district. The District Commissioner is supported by Heads of Government Departments from various line Ministries and sectors who report directly or through quarterly District Development Coordinating Committee (DDCC) meetings.

PART TWO: PLANNING SURVEY AND ISSUES REPORT

Introduction

The Planning Survey and Issues Report establish the key issues that define the current situation and problems context for Chama District. The key section of this part in the formulation of the Integrated Development Plan is that, it is characterized by different stakeholders in the district. This process ensures innovativeness from ideas from stakeholders and ownership, focused on improving and strengthening service delivering, reducing poverty and well-planned infrastructure developments in the district. This chapter reviews the existing plans, policies and strategies and further analyses the empirical and spatial data of various sectors to identify cross cutting issues. This will inform formulation of the development framework that will help in addressing the core problems that will be established.

Demographic Analysis

Historic Population Levels and Historic Population Growth Rates

In Chama district, the population has been gradually growing from 55,172 people in 1990 to 74,890 in 2000 with an annual average growth rate of 3.1 percent. Further, the population grew from 103,894 in 2010 to 140,784 in 2022 (CSO, 2022) with an annual growth rate of 2.5%. The 2022 distribution of the population by ward is depicted in Table 2.

The disparity between the two population ranges is significant. The district's ward with the highest population is Kamphemba, while the smallest is Chipala. This is due to the fact that Kamphemba ward is the most urbanized, with adequate

basic goods and amenities to attract huge populations. Above all, it serves as the district administrative headquarters and a hub for business activity.

Conversely, Chipala is situated across Luangwa River that restricts development, features remote communities with smaller household sizes, is technically considered a wildlife corridor/hotspot, as evidenced by the high number of conflicts between humans and wildlife. During rainfall, the ward becomes inaccessible with roads and people migrate out of the area during rain seasons as it becomes very difficult to access other neighboring wards for services like schools and healthcare services. These elements have had a part in Chipala Ward's low population.

Table 2: District Population 2022

PROVINCE/DI STRICT/ CONSTITUEN CY/WARD	TOTAL			RURAL			URBAN			AREA AND POPULATION DENSITY	
	BOTH SEXES	MALE	FEMALE	SEXES BOTH	MALE	FEMALE	SEXES BOTH	MALE	FEMALE	Area in km ²	Population density

Population Density at Ward Level

Population density is calculated as the total number of people per square kilometer. The Chama district covers 17,472.8 square kilometers. Between 1990 and 2022, Chama's population per square kilometer increased. According to CSO (2022), Chama district's population density has risen from 3.1 in 1990 to 4.2 in 2000, 5.9 in 2010, and 8.1 in 2022. Despite the sluggish rate of development in population per square kilometer, the meaning of this expansion is the need to plan for adequate services for an expanding population.

In terms of wards, Kamphemba and Kaozi are the most densely populated wards whilst Chipala and Muchinga are the least highly populated wards. These extreme cases like Kamphemba which are densely populated and as such, more resources have to be channeled towards service provision to ensure that the high population density does not negatively affect the environment. With high population density, outbreaks of diseases tend to be high followed by other negative vices. For least populated wards like Chipala, they would be inefficient resource allocation to the wards to service sparsely populated communities.

Map 1 illustrates how population density is according to wards and populations between around 10,000 and 15,596; the darker tint denotes the district's highest population concentration, whereas the lowest-populated areas have populations between 1,000 and 2,500.

Map 1: Population Density by Ward

Source: Chama Town Council (2022)

Population and Population Growth Rates of Urban and Rural Areas

In 2010 rural to urban population ratio was 96,865 to 7,029 inhabitants which represent 93.2 and 6.8 percent respectively. In 2022 the rural to urban population ratio changed to 91 to 9 percent. Further, the District has a higher proportion of women than men, and 93% of the population lives in rural regions (Figure 2). Due to the job and business opportunities brought about by the expansion of commercial activity, people from both outside and inside the district have emigrated, resulting in this urban population distribution pattern. This tendency suggests that the area possesses human capital that may lead the district's growth and that a greater proportion of the district's population lives in rural areas, indicating and requiring that a large portion of development initiatives and shares be directed at the rural population.

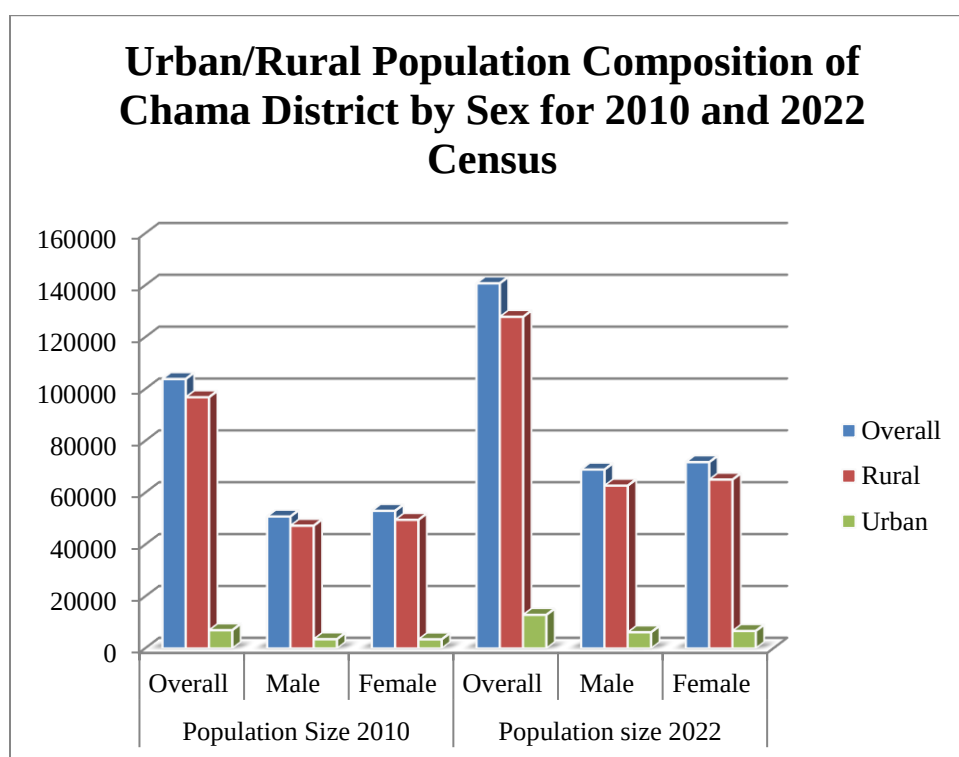

Figure 2: Urban/Rural Population Composition of Chama District by Sex

Source: CSO (2022)

Population Distribution by Sex

The Figure 2 illustrates the population distribution by sex, among males and females of all ages in Chama District as of 2022. The population for the number of females was estimated at 71,616 while the overall estimated population for males was estimated at 68,710. In comparison to the 2010 census Chama still had a higher number of females compared to males, which was at 48.1 for males per and 51.9 percent for females.

Implications of a Large Female and Rural Population

The representation of more female suggests that women's demands and empowerment initiatives, particularly in the fields of economics and governance, must receive significant attention in order to reduce women's vulnerability and reliance on men to almost nothing. One of the most vulnerable groups in society, particularly in rural areas, is women. Given that a significant majority of Chama's population lives in rural areas, policy implications for promoting gender equality, equity, and women's empowerment must be the main focus of population and development-related initiatives.

Approximately 90.8% of the district's population lives in rural areas, with only 9.2% residing in urban areas. This suggests that a greater proportion of the district's population resides in rural areas, highlighting the need to focus development efforts and distributions on the rural populace. Given the aforementioned, the rural populace lacks the resources and opportunity necessary to urbanize and afford a well-served urban lifestyle. More people are forced to live in rural regions and engage in labor-intensive, subsistence-based income-generating activities that are mostly agrarian and largely unsustainable due to a lack of traits like contemporary agricultural skills, entrepreneurial abilities, professional career achievement, etc. To put it another way, individuals lack the skills necessary to

find work, and urban investment activities are unable to accommodate them. In light of this, it is necessary to proactively prepare for the majority of people living in rural areas so that they may actively participate in and sustainably lead local economies.

Therefore, agriculture must be developed through the introduction of automated systems, value addition, up-scaling rice production and crop diversification; agro-marketing systems; enhanced tourism; and formalized mining operations in order to economically change the district's rural areas. Economic diversification in the district will undoubtedly be induced and promoted by these and similar developments, which will draw non-agricultural yet sustaining economic enterprises.

Population Growth Rate

The population growth rate measures the rate at which the number of individuals in a population increases or decreases over a specific period, typically expressed as a percentage change per year. The purpose of PGR it will help anticipate future population needs, plan for infrastructure, and allocation of resources; economically it will influence economic growth, and labour market; it will also help to assess the impact of population growth on natural resources and the environment; it will inform decisions on population control, immigration and urban planning; it will also be used to provide insights into demographic trends, fertility rates and mortality rates. The growth rate is another crucial component of the demographic dynamics of the Chama District. Between 1990 and 2022, the district's yearly population growth rate decreased from 3.2% to 2.5%. According to Table 3 below, the population has been rising more slowly between 2010 and 2022 than it did between 2000 and 2010. This is because there haven't been any noteworthy developments that might have altered population increase

significantly. This has been the major cause of migration from the district especially the youths who go looking for opportunities.

Table 3: Population Growth Rate, Density and Population Size

Description	1990	2000	2010	2022
Annual Growth Rate	3.2	3.1	3.1	2.5
Population Size	55,172	74,890	103,894	140,784
Population Density	3.1	4.2	5.9	8.1

(Source: CSO, 1990, 2000, 2010 and 2022)

This decrease implies shortage in labor markets especially for key skills, reduction in potential tax revenue, shifts in education and healthcare resource allocation, tailor policy and programmes towards job creation and economic diversification.

Fertility Rate and Mortality Rate

Understanding the variables that oppose efforts intended to lower the district's general death rate in relation to its fertility rate is greatly aided by knowledge of fertility and mortality rates. According to predicted census data for 2022, the fertility rate in Chama district was 6.6 percent. However, the district infant mortality rate was on the negative side and 20.6 below the province's average infant mortality rate of 78.1 when compared to the fertility rate.

These statistics imply that there is high fertility rate and low infant mortality rate, this explains growing population. However, the low population growth rate is as a result of migrations. In addition, the high fertility rate puts pressure on resources, infrastructure and social services. The negative infant mortality rate suggests limited access to family planning and reproductive health services, and potential for increased poverty and inequality.

Disability Status

Effective development implementation is based on inclusive planning, which is why the District Integrated Development Plan considers the less fortunate members of society. There are 600 disabled individuals in the Chama district, according to the 2022 census, which makes up 0.34 percent of the entire population. Of them, 350 are female and 250 are male, making up 0.2 and 0.14 percent of the total population, respectively. This disability status is lower than the 15% according to *WHO*. This indicates a smaller proportion of the population requires specialized care, support and accommodations. However, it is paramount that the few people with a disability are included in development planning.

Median Age

The median age of a population is the age at which it is split into two numerically equal groups, meaning that half of it is under the age and the other half is above it. A median age that is lower than 20 years shows a young population; that which is between 20 and 30 years indicates an intermediate population that is either becoming younger or ageing; while a population with a median age above 30 years is an old population (SOURCE). The 2022 census statistics shows the median age for the district at 18 years, implying that Chama district has a young population. This implies that there is a large workforce potential: Majority of population is entering or already in working age; Economic growth potential: Young population can drive economic expansion; Innovation and entrepreneurship: Young people can bring new ideas and energy; Adaptability: Young populations can adapt quickly to changing technologies. However, this calls for meeting educational needs of a young population, creating jobs for a growing workforce, addressing health needs of adolescents and young adults, and providing support for youth, including mental health and recreation.

Age Dependency Ratio

Age Dependency Ratio is the ratio of the population aged 0-14 years and persons aged 65 years and older, per 100 persons of working age 15-64 years. It shows the burden of dependency on the productive population. The 2022 projected census statistics shows that the district has an overall age dependency ratio of 114.9 translating from the child dependency ratio of 107.4 and age dependency ratio of 7.4 per 100 persons of working age 15-64 years. These statistics shows a high ratio indicates more dependents per working-age individual, high Child Dependency Ratio indicates a large proportion of children dependent on working-age individuals, and the relatively low Old-Age Dependency Ratio suggests fewer elderly dependents. This suggests that there is need to plan for more social service facilities. Economically, this indicates an increased tax burden on working-age group, pressure on social security and pension systems, potential labor market strain due to high youth population, and opportunities for economic growth through youth entrepreneurship and innovation.

Migration and Urbanization

Similar to other districts, Chama has seen a rise in migration as a result of commerce, education, and job. The primary driver of migration, particularly among young people, is unemployment. There aren't any significant industries or large corporations in Chama area to take in the vast amount of jobless youths. Because of this, the majority of young people travel to new places like Lundazi in quest of employment and a better living. The government is the largest employer in Chama.

The urban population of Chama district increased from 7,029 in 2010 to 12,923 in 2022, indicating a rapid pace of urbanization. The district's rapid infrastructural development and socioeconomic development are the causes of the

exponential expansion. The government's recent extensive hiring of teachers and medical personnel has also contributed to the rise. Due to the rapid urban population growth, it is necessary to plan for infrastructure and services that can accommodate a large number of people, implement an integrated waste management system because urbanization increases waste generation, account for rural-urban drift, implement policies that limit the spread of slums and informal settlements by providing affordable housing, and prepare for epidemics and other heat-related illnesses.

Population Projections

Estimate of Future Population

Population projections are crucial because they aid in making plans for the future well-being of human communities. In terms of size and composition by age and sex, population projections can give a general idea of the most fundamental aspects of future human societies (CSO, 2013). Cohort component technique and mathematical models are the two fundamental approaches used to create population projections (CSO, 2013). The most accurate way to predict the population is to use the cohort component model, which accounts for all the factors that influence population change, including net migration, death, and fertility. The cohort component technique is thought to be the best standard for population predictions, although it is less helpful at lower administrative levels when demographic change data may be absent or incorrect. Therefore, forecasts at the national level are typically made using the cohort technique. Using a mathematical table is acceptable for population prediction at the sub-national level (CSO, 2013).

To be more specific, a geometric model of population growth—which illustrates exponential population increase—was employed to forecast population growth

in the district over the following 20 years. Because there are a lot of young people in the district, the population is predicted to rise rapidly owing to the strong population momentum. When a mathematical function's growth rate is proportionate to its present value, it achieves exponential growth, which makes the function's growth over time an exponential function. The following formula provides the geometric progression of the population:

$$P_n = P (1+r)^n$$

Where;

P is the population in the base year,

P_n is the projected population

r is the growth rate, and

n is the projected year

Taking the year 2022 as the base year, If the base population is 140,784, and $r = 2.5$ and $n = 20$.

Table 4 shows the calculated population projection by constituency;

Source: CSO (2022)

Assessment of the Existing Land Use and Settlement Pattern in the District

Overall Settlement Pattern

With regards to settlement patterns and their impact on land use and spatial development, this plan takes note of the three types of patterns namely;

1. Dispersed – In this kind, settlements are spread across an area or territory. This is particularly common in areas known for farming activity. This kind can be seen in areas like Lundu, Kambombo, parts of Vilimukulu ward, Nkhankha, and Mazonde wards.

On the other hand, it is beneficial for re-planning purposes and township expansion. Considering the nature of coming activities, most areas are not densely populated and as such are easier to plan. Legal implications are also minimal as majority of land in the case of Chama district is under traditional jurisdiction.

2. Nucleated – Settlements, in this case, are more central-based and close together. This is typical of town centers, places of trade, economic growth nodes, or areas with public facilities such as hospitals, schools, etc. Kamphemba, Chibale, Sitwe, Mulilo, and parts of Kambombo are examples of this type.
3. Linear – As the name implies, this kind is generally along a line feature such as roads, rivers, rail, or powerline depending on what attracts the settlement. The most common occurrence of linear settlements in the Chama district is along roads. Mbazi, Mwalala, parts of Kalinkhu and Luangwa wards as well as Mapamba are examples of this kind.

For settlements along trade routes and natural features like roads, rail lines, and rivers, the population has an advantage of transportation and access to water. This is an advantage for the local economy as it aids them in terms of irrigation and trade.

However, the down side is that settlements along rivers are susceptible to floods, as is the case in some areas within the Lunzi ward. Waters from the upper land flow into the Luangwa River which in turn overflows in the south causing havoc to nearby settlements. In terms of planning, this creates a challenge for expansion as issues of zoning come into play; animal corridors are off-limits and as such, are not conducive for agricultural activity due to issues of human-wildlife coexistence challenges. In addition, those settled along main roads are often affected when issues of expansion arise which is an expensive undertaking. Figure 4 depicts the settlement pattern in Chama District.

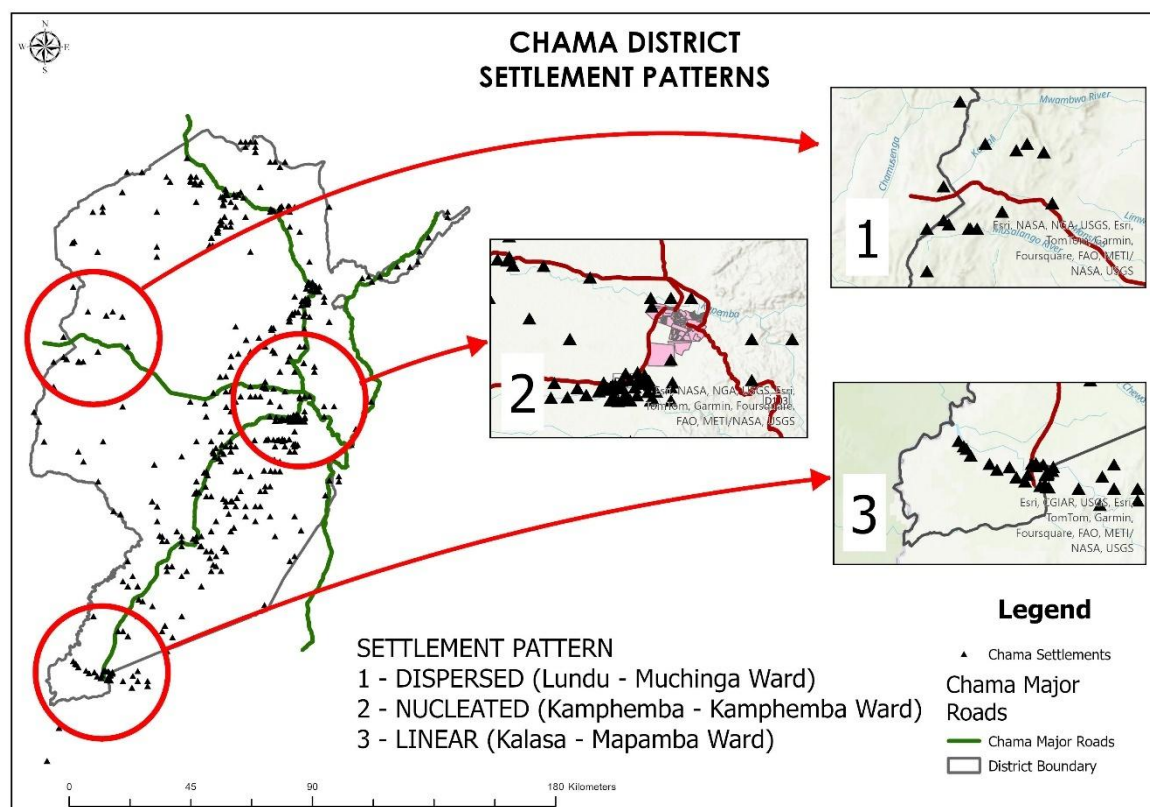

Figure 4: Chama District settlement pattern

Source: Chama Town Council (2024)

Informal Settlements

According to the Urban and Regional Planning Act No.3 of 2015, "informal settlement" means —

- a. groups of people living on land they have no legal claim to;
- b. houses of a temporary, semi-permanent or permanent nature erected on land that have not formally been permitted by the planning authority and serviced for residential use under this Act or any other written law;
- c. clusters of housing and other structures built without the formal permission of the planning authorities under this Act, any other written law or the repealed Acts; or

d. settlements that have only temporary permission from the planning authority to occupy the settled land;

Based on this description, about 92% (25,790 Households) of settlements in the district are informal in nature with only part of the Kamphemba ward, the 8% (2,273 Households) being planned. As such, they are unable to access some of the benefits that come with residing in a planned area such as public utility services, financial aid, and housing programs among others. This is an issue the IDP intends to gradually address.

Land Use Planning

Description of the Existing State of Land Use and Development

Chama district has been planned for different land uses in an effort to provide services appropriately to residents of the district and make it a habitable place for all. Chama has a land mass of approximately 17,472.8 km². Much of this land has been taken up by various competing land uses such as residential, commercial, institutional, and industrial and agriculture (Table 6).

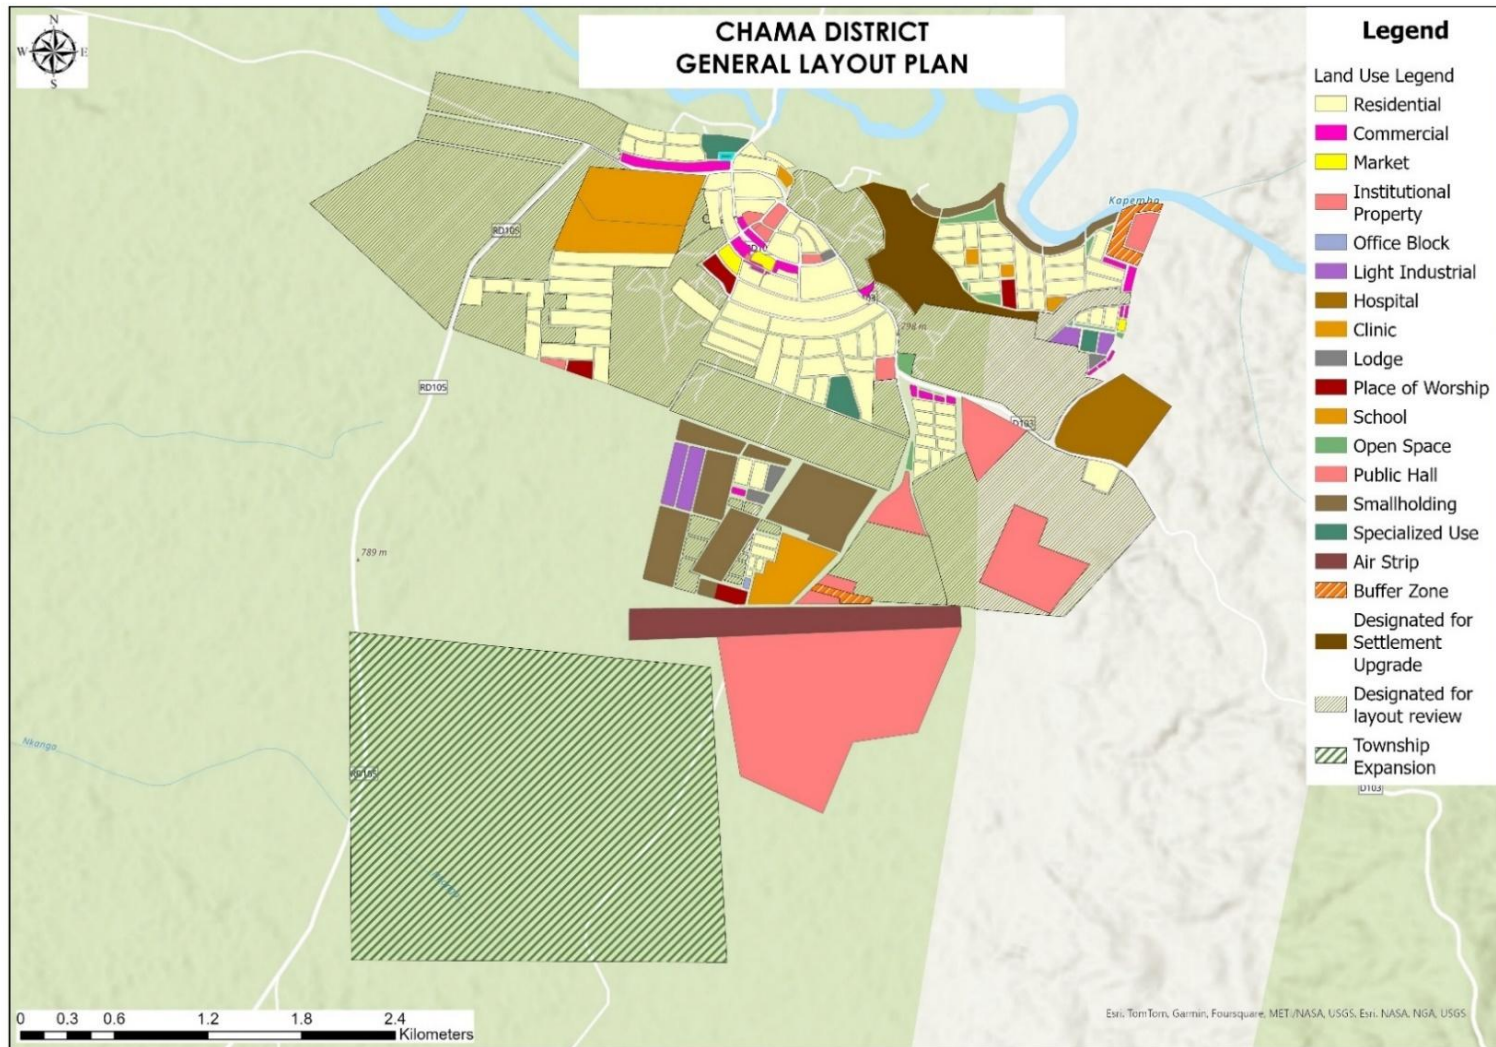

Table 6: Different land use types and sizes

LAND USE	AREA M2	AREA KM2
Residential	1831551	1.831551
Commercial	111720	0.11172
Market	30064	0.030064
Institutional Property	1716111	1.716111
Clinic	22949	0.022949
Lodge	31668	0.031668
Place of Worship	71688	0.071688
Public Hall	6778	0.006778
Specialized Use - water aquifer, abattoir	83362	0.083362
Designated for layout review	5189615	5.189615
Smallholding	650870	0.65087

Open Space	56542	0.056542
School	555578	0.555578
Light Industrial	102811	0.102811
Office Block	2649	0.002649
Hospital	261233	0.261233
Air Strip	359036	0.359036
Designated for Settlement Upgrade	322366	0.322366
Township Expansion	4697030	4.69703
Land under smart agriculture	120,000,000	120
Community Forest Management Areas	8,653,700,000	8653.7
TOTAL AREA	8789803621	8789.8036

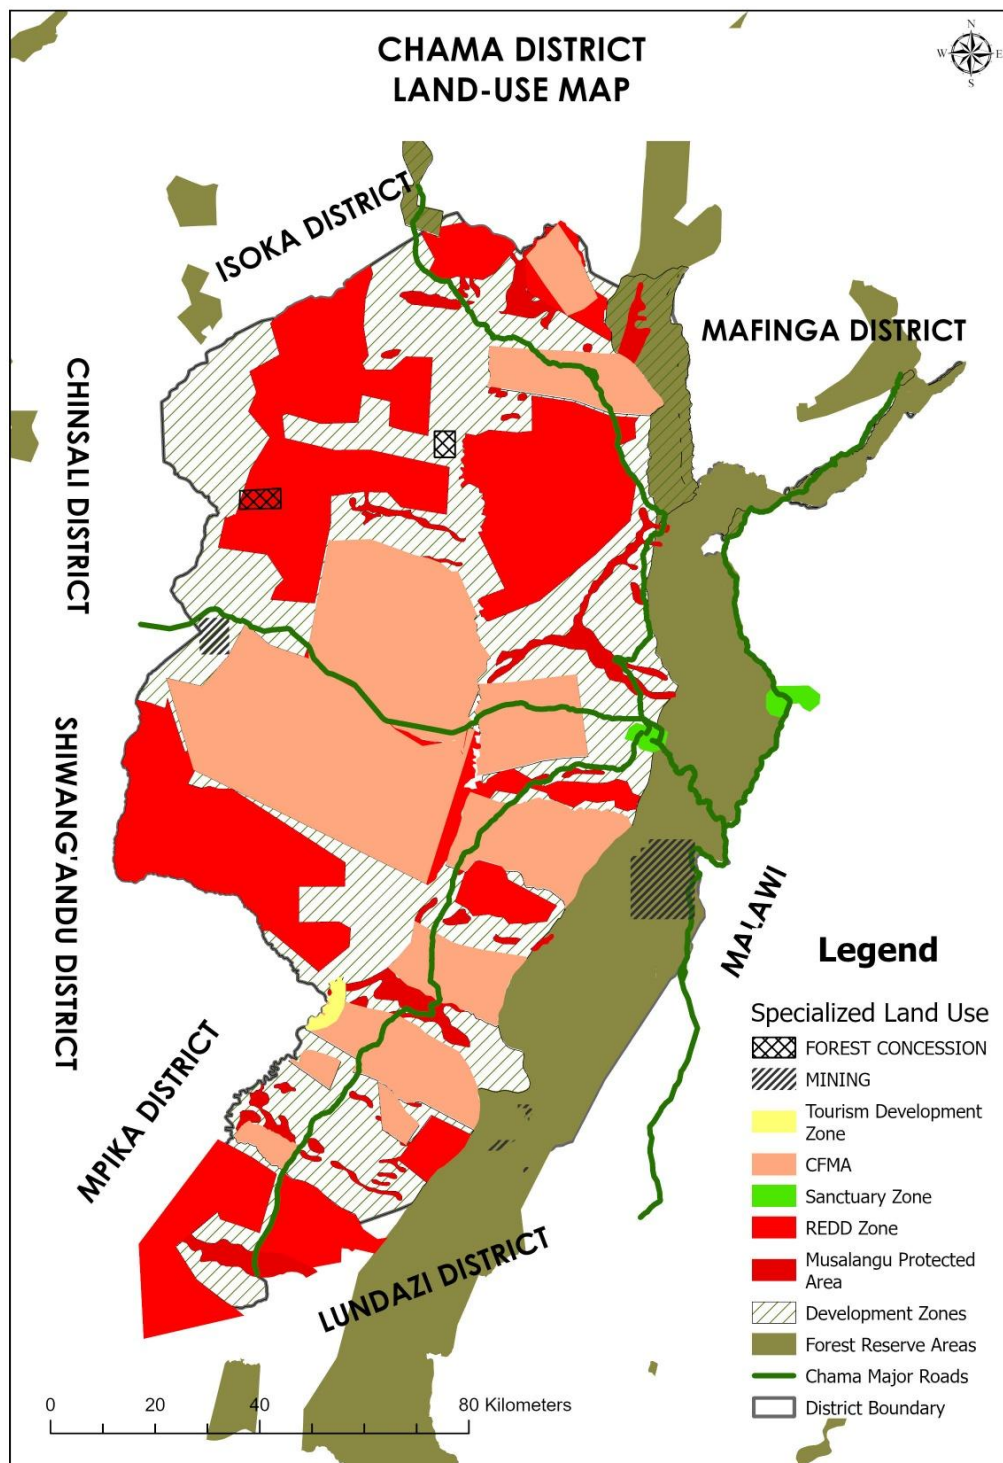

Source: Chama Town Council (2024)

From Table 6, it can be deduced that the current predominant land uses are agriculture and forest reserves. However, it should be noted that the data, apart from agriculture and forestry, is for state land.

Map 2: Chama District General layout plan - land uses in the planned area

Source: Chama Town Council (2024)

Map 3: Land use zones in the district
Source: Chama Town Council (2024)

Impact of the Continuation of Population Growth on Land Use and Spatial Development Patterns

Population growth has profound effects on land use and population distribution, presenting both opportunities and challenges. Population growth can drive economic development by expanding the labor force and consumer market. Urbanization, fueled by population growth, can foster innovation, cultural diversity, and improved infrastructure. Increased population demands better transportation, services, and amenities, contributing to overall economic growth. However, population growth also poses significant challenges. Land degradation, resulting from increased pressure, leads to deforestation, soil erosion, and habitat loss. Unplanned urban growth results in sprawl, congestion, and decreased quality of life. Resource scarcity, environmental degradation, and climate change are additional concerns.

It is expected that with the trend in the existing population, there will be agricultural expansion, driven by food demand that will contribute to deforestation and habitat loss. Further, urbanization is anticipated that will convert natural areas and agricultural land to urban uses, while infrastructure development will fragment habitats. These changes will have far-reaching consequences for ecosystems and biodiversity.

In terms of population distribution changes, it is anticipated that urbanization will lead to increased density and strain on services. Migration patterns will shift as people will seek better opportunities. Changes in population demographics, such as age and sex structure, will influence land use and resource demands. In addition, the district has started experiencing urban population growth around Kamphemba Ward.

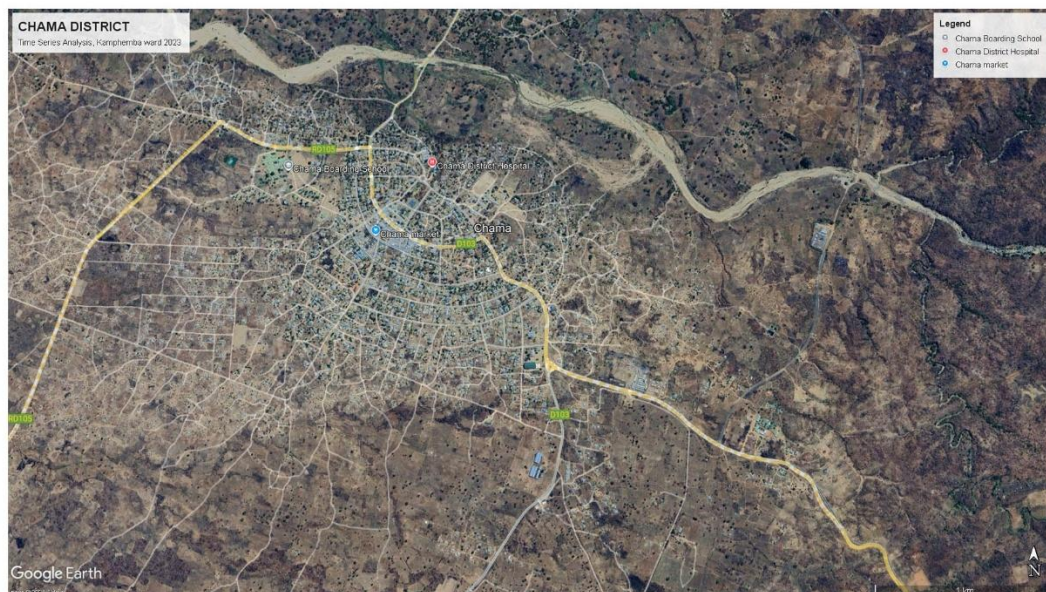

To address these challenges, there will be need for sustainable urban planning, resource-efficient technologies, conservation and restoration efforts, education and family planning, and infrastructure development (public transportation, green spaces) will be essential.

Figure 5 is an extract of google images depicting a time series analysis on the change effect of population over 12 years in Kamphemba ward. The first image shows Kamphemba ward at a population 7,029 in 2011 and the subsequent image is at a population of 12,923 in 2023.

PART TWO: SECTORAL AND THEMATIC ANALYSIS

AGRICULTURAL SECTOR

Agriculture sector is a mainstay of the people in Chama district as people earn their living through the agriculture sector. The people of Chama continue to live a socially and economically productive life by engaging themselves in crop farming.

Key Government Priorities to Be Implemented at a Local Levels

Key Priorities of the Development Plans, Policies, Strategies and How They Are to Be Implements at a Local Level

The key priorities in the plan include diversification and increase Climate Smart Agriculture promotion in crop production and productivity. The other Key priorities include promotion of value addition. These priorities are being done at the local level by supporting farmers with agricultural inputs and advisory services through extension services, engagement meetings with farmers and lobbying for support from stakeholders to assist farmers procure equipment to support value addition.

There is existing overarching Policy Frameworks, various policies and strategies which are relevant for agricultural development and enhancement of food security. Current development plans, strategies and policies relevant to the agricultural sector available include;

- ✓ Second National Agricultural Policy (2016)
- ✓ National Food and Nutrition Policy (2006)
- ✓ The National Decentralization Policy (2013)
- ✓ Rural Finance Policy and Strategy (2012)
- ✓ National Monitoring and Evaluation Policy (2019-2023)

- ✓ National Livestock Development Policy (2020)
- ✓ National Trade Policy (2018)
- ✓ National Lands Policy (2021)

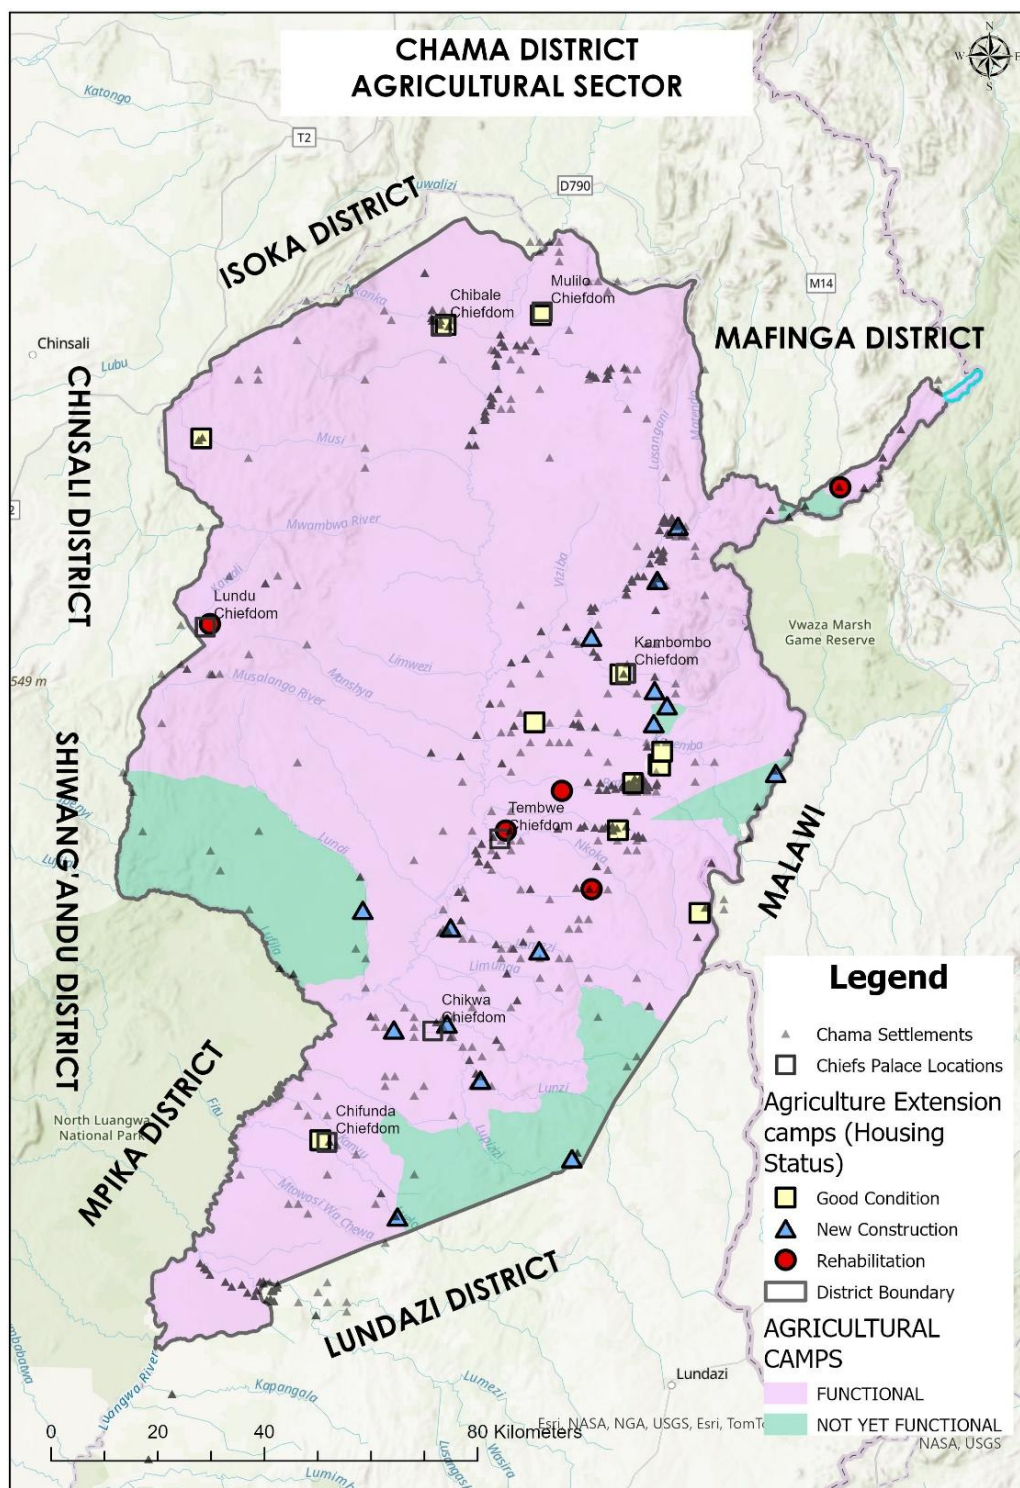

Assessment of the Existing State of Development

In Chama district, the following are being implemented in the agricultural sector;

The sector is implementing improved agricultural production and productivity through Climate Smart Agriculture promotion in 25 agricultural camps, currently the sector has 12,000ha Area under smart conservation agriculture. The district is also implementing Enhanced Farmer support program and Agroforestry and tree crops development, currently the sector is supporting 7,145 farmers with inputs under Farmer Input Support Program (FISP). The sector has managed to employ 21 camp officers to enhance Agriculture extension services delivery in the district. Also, Early warning and surveillance system being done by strengthening Early warning systems in the district (25 rain gauge across the camps 1 automated weather station being done by the SCRALA project and Biocarbon Partner (BCP). The sector has one (1) Farmers Training Centre (FTC) which is meant for farmers learn and adopt farming technologies.

Assessment of the Overall Performance of the District

The overall performance of the sector is estimated at 67.7% that is in terms of extension staff's provision, which is the backbone of agriculture production and productivity. There are some programs, which are not fully done due to limited number of staffs and inadequate number of decent housing. Map 4 below depicts the housing status within the district.

Currently 12 camps out of 31 have decent housing units; the services are average due to the officer-farmer ratio, which is currently standing at 1:1200 (recommended ratio world standard 1:400).

The sector has been divided into thirty-one (31) agriculture camps, which are subdivided into four-agriculture blocks. Twenty-one (21) camps are manned by twenty-one (21) extension officers charged with the responsibilities of providing extension services to farmers on agricultural practices that are climate resilient and productive while ten (10) camps are not yet manned. The district has an automated weather station at Chiteba Secondary School in Tembwe agricultural. The sector has 25 rain gauges to provide data, which help in development of early warning systems and rainfall patterns. The district has two (2) bulking centers in chibale and katangalika agricultural camp and two (2) tri-cycle these directly promote good marketing and transport systems in value chain. The sector is constructing a weir in Kalovya to promote irrigation in the district.

A total number of 7,145 small-scale farmers are accessing agricultural inputs through Farmer Input Support Programme (FISP). The sector has more than 37669 farmers registered under its system (ZIAMIS) this shows that the sector has potential to work with so many farmers and become a food hub for the province. Other activities will include the establishment of 15 farmer field schools in different camps to help farmers with hands- on learning of good agriculture practices (GAP) and proven new agriculture practices. Further 25 rain gauges in 25 camps have been installed to give rainfall data to help farmers make informed decision. One weir has been constructed in kalovya camp to help farmers plant even off rain season.

The quality of services provided in the agricultural sector is average due to inadequate extension service due to unmanned camps and manned camps with

no proper housing for the staffs. This has negatively affected crop production for some farmers in Chama district.

Issues from Public Participation Process

The issue arising from the community concerning overall performance was the need to ensure that decent housing is built for the extension staffs and also unmanned camps are filled up if quality service was to be delivered.

Impact of Changes Anticipated on Land Use and Population Distribution Patterns Over the Next Ten Years

The population increase as highlighted under population projection in the next ten (10) years is likely to double the number of farmers in the district and this will demand a corresponding increase in the number of extension worker to provide extension services to all the farmers in the district. The demand for land for the farmers who do farming will result in reduction of the total extent of the forest cover and the size of the wetland in the district, which may contribute to climate change and weather veracities. Further, population increase will mean demand for food will increase and prices for the commodity will increase. This translates to more and more demand for land for agricultural purposes. If farmers continue to use traditional methods to do farming, more forestry land and wetland will be reduced.

The proposed area of growth in the agricultural sector include: Pondo, Chasato, Kasela, Kaozi, Mungwalala and Kamfutu agriculture. These camps have since been gazetted.

The government through the department is promoting an economic diversification by encouraging people to engage in farming activities and order to ensure actualization of these agenda farmers are empowered with farming

inputs and credit loans. This investment program has attracted more to venture into farming activities. This will lead to more demand for agricultural land; bringing about land use conflict as pressure of people moving into protected area increase. The situation may also affect population distribution pattern, as farmers will settle in protected areas.

Impact of Environment and Climate Change

The increase in demand for land and the movement of the people into protected area and any other forested area will lead to an increase deforestation, loss of biodiversity. These development trends will lead climate change effects such as late onset of the rains, increased temperatures and prolonged dry spell.

There are many environmental and climate change impacts on this sector which includes; late onset of the rain season which affects the yield of the crop, increased temperatures which means increased pest incidence and diseases, prolonged dry spells hampering productivity in maize and other crops.

Issues Arising Relating to Gender Groups and Vulnerable Groups

Access to agriculture information and technologies due to gender inequality is one of the constraints in the agriculture sector. It has been shown that men typically receive more extension advice and have more contact with extension agents than women and girls yet women and the girls carry an important proportion of agriculture work.

Typically, men hold more of the productive role involving the operation and maintenance of the farm. The production and productivity resulting from the empowerment programs designed for women, youths and the differently abled, has improved their livelihood with a trickle effect on the reduction of girls' and boys' dropout rate and reduction in HIV/AIDS incidences.

External Factors Contributing to the Issue

There are many external factors, which contribute to the issue some of which includes climatic factors, macroeconomics, competitors and customers, and these factors are uncontrollable factors that affect production.

Summary of the Core Issues

- ✓ Low crop yield per unit area
- ✓ Inadequate diversification of the crops
- ✓ Poor infrastructure greatly affecting the sector performance.

LIVESTOCK AND FISHERIES

The livestock and fisheries sector play an important role to the national development through provision of various meat products to the economy. The sector facilitates and supports the development of sustainable, diversified and competitive fisheries and livestock sectors that assure food and nutrition security, contribute to job creation, maximize profits and contributing to Gross Domestic Product (GDP).

Key government priorities to be implemented at a local level

Livestock

The sector is governed by the National Livestock Development Policy of 2020 with the following key priority areas;

- ✓ To promote sustainable livestock production and productivity;
- ✓ To promote established standards and quality of livestock, livestock products, and by products;
- ✓ To strength livestock Research and Development;

- ✓ To promote sustainable management of Farm Animal Genetic Resources;
- ✓ To improve the animal welfare and livestock production environment;
- ✓ To improve animal health service delivery;
- ✓ To improve the management of rangelands and livestock water resources; and
- ✓ To establish a Livestock Information Management System (LIMS)

Fisheries

The following are the key priority areas in the fisheries sector;

- ✓ Promote the sustainable development of fisheries through a preventive approach in fisheries management, conservation, utilization and development;
- ✓ To establish fisheries management areas and fisheries management committees;
- ✓ To provide for the regulation of commercial fishing and aquaculture;
- ✓ To establish the Fisheries and Aquaculture Development Fund;

The key 8NDP priorities being and will be implemented in Chama include the following;

- ✓ Improved and diversified of agriculture input supply chain
- ✓ Increased exports of agricultural commodities
- ✓ Improved Agro-processing and value addition capacity
- ✓ Enhanced capture fisheries production
- ✓ Enhanced aquaculture fish production
- ✓ Enhanced participation of youth in aquaculture
- ✓ Improved livestock and fisheries infrastructure

The fisheries and livestock sector in Chama is underdeveloped due to low productivity and the 8NDP key priority areas are slowly being implemented because farmers are failing to increase the livestock numbers due to wild animal conflict, as the interaction is high which leads to domestic animals being killed, being infected with diseases like African Swine fever and rabies. The problem is common in Chama South Constituency and along Luangwa River area.

The rearing system is where fish growth is at times totally dependent on the natural food population within the pond ecosystem. The type of production under the District Fisheries and Livestock is the production of quality seed (fingerlings brood stock management). Secondly, in rural enterprises there are few specialized fingerling producers. On the other hand, farmers do not have any donor support at the moment, they only receive technical assistant from fisheries officers at the district who are also under staffed. In addition, the district has no reliable supplier of feedstock which makes sustainability of most of the projects very difficult.

At district level, the fisheries, livestock and veterinary services sector devolution plan is being implemented in addition to the 8NDP district implementation plan.

Assessment of the Existing State of Development

The district has 1 dam that is currently not stocked with fish in Chasato. Majority of the fish is reared in ponds. There are few ponds in the district with the following species as indicated In Table 7.

Table 7: Population of Fish Farmers per Block and Number of Ponds

DISTRICT	BLOCK	CAMP	NAME OF FARMER/FARMER GROUP/COOPERATIVE/CLUB	PONDS/DAMS	NO. OF AQUA FACILITIES
Chama	Mphalausenga	Dungulungu	Dungulungu Women's Club	Ponds	7 stocked, 5 unstocked
Chama	Luangwa	Chibale	Nachintoto Women's Club	Ponds	25 stocked, 10 unstocked
Chama	Mphalausenga	Kambombo	Mr Chilembo (Samamba village)	Ponds	6 stocked, 4 unstocked
Chama	Mphalausenga	Chama central	Mr Salu (FTC)	Ponds	1 stocked, 5 unstocked
Chama	Mphalausenga	Chama central	Mr Goma (Kaneta village)	Ponds	1 unstocked
Chama	Bazimu	Buli	Moonlite farmer group	Ponds	2 unstocked
Chama	Bazimu	Kalovya	Mr Banda (Kwendakuzulu village)	Ponds	6 unstocked
Chama	Mphalausenga	Chama central	Chama Boarding Secondary School	Ponds	1 unstocked
Chama	Bazimu	Mundalanga	Mundalanga farmers group	Ponds	2 unstocked
Chama	Mphalausenga	Chama central	Mr Kumwenda (Kaneta village)	Ponds	2 unstocked

Source: Department of Livestock and Fisheries (2023)

There has been an increase in the number of ponds due to efforts being put in by the department in collaboration with CEEC, CDF and TRALARD.

In terms of livestock, the following Table 8 presents the services available in the district;

1. Dip Tanks

Table 8: Livestock Services available in the district

S/N	DIP LOCATION	TANK	VET CAMP	SCOPE	COMMENT
1.	Chama central		Chama central	New Construction	Yet to be completed
2.	Chasato		Manga	New Construction	Yet to be completed
3.	Kaozi		Kambombo	New Construction	Yet to be completed
4.	Kanyelegele		Kanyelegele	New Construction	Yet to be completed
5.	Kalovya		Kalovya	New Construction	Yet to be completed

Source: Chama Livestock department (2024)

2. Spray Races

There are no spray races in the district.

3. Livestock Service Centers

The district has one (1) Livestock service center at Chizimba which has been vandalized.

Assessment of the Overall Performance of the District

Due to a number of unfinished infrastructure projects, the district continues to fare poorly in this area. Furthermore, the department does not have enough personnel or transportation to adequately oversee the many activities taking place in the district. Table 9 indicates that the quality of services provided in the district is generally poor and most parts of the district do not receive the services from the department.

Table 9: Quality of services arising from public participation

S/N	Services	Quality of Service	Issues arising from Public Participation	Where the service is provided
1.	Animal Health Extension Services	Poor	Service only provided at the CBD	Mazonde, Muchinga, Kaozi, Lumezi, Chilubaluba
2.	Animal Health Public Services	Poor		Mazonde, Muchinga, Kaozi, Lumezi, Chilubaluba
3.	Surveillance and Enforcement services	Poor	Officers do not visit most livestock/fisheries projects/farms	Mazonde, Muchinga, Kaozi, Lumezi, Chilubaluba
4.	Community Sensitization	Poor	Service is provided but not adequate	Mazonde, Muchinga, Kaozi, Lumezi, Chilubaluba
5.	Issuance of Stock Movement Permits	Poor	Service not provided	Mazonde, Muchinga, Kaozi, Lumezi, Chilubaluba
6.	Animal Identification and Traceability services	Poor	Service not provided	Mazonde, Muchinga, Kaozi, Lumezi, Chilubaluba
7.	Management and Support Services	Poor	Officers do not visit most livestock/fisheries projects/farms	Mazonde, Muchinga, Kaozi, Lumezi, Chilubaluba

Source: Department of livestock and fisheries (2024)

Issues from Public Participation Process

The sector's overall performance in the district is often rather bad. This can be linked to several issues brought up throughout the consultation process for public engagement. These were the main concerns that surfaced during the consultation process:

- ✓ Water Capacity: Dams need to be constructed to increase water capacity for livestock and fish farming.
- ✓ Livestock Feed: Legumes planting should be promoted among livestock farmers to improve feed quality.
- ✓ Overgrazed Areas: Solar-powered commercial boreholes should be installed to restore overgrazed areas.
- ✓ Fish Farming: A fish hatchery needs to be established to supply fingerlings, and support should be provided to fish farmers.
- ✓ Staff Accommodation: There's a shortage of staff accommodation, which hinders officers from serving the communities effectively.
- ✓ Disease Control: Non-functional dip-tanks need to be rehabilitated to facilitate disease control.
- ✓ Climate-Resilient Livestock: Farmers should be supplied with climate-resilient livestock, such as goats and village chicken.
- ✓ Ecological Enhancement: Trees should be planted along and around water points as part of a water management strategy.
- ✓ Stocking and Restocking: Programmes should be implemented to stock and restock fisheries.

Assessment of the Impact of Changes Anticipated Over the Next Ten Years

The district population is growing at an average of 2.5 per annum all things being equal. This entails that, a total number of registered farmers is likely to grow

proportionately with overall population growth. This will entail that there will be high demand for land and basic services in the fisheries and livestock sector.

Future Demand for Services and Facilities Based on the Estimates of Population Change

The growing population in the district has significantly impacted livestock and fish production, leading to increased demand for sector products. However, the traditional farming practices and limited resource base cannot keep pace with this demand, resulting in lower yields. To address this challenge, there is a pressing need to upgrade and expand fisheries and livestock services, including research and technology, to increase production and meet the growing demand.

The planning area's undeveloped fisheries subsector makes up less than 1% of the local economy. There are, nonetheless, some possible development areas. Table 10 below shows the locations that require restoration and have room for expansion.

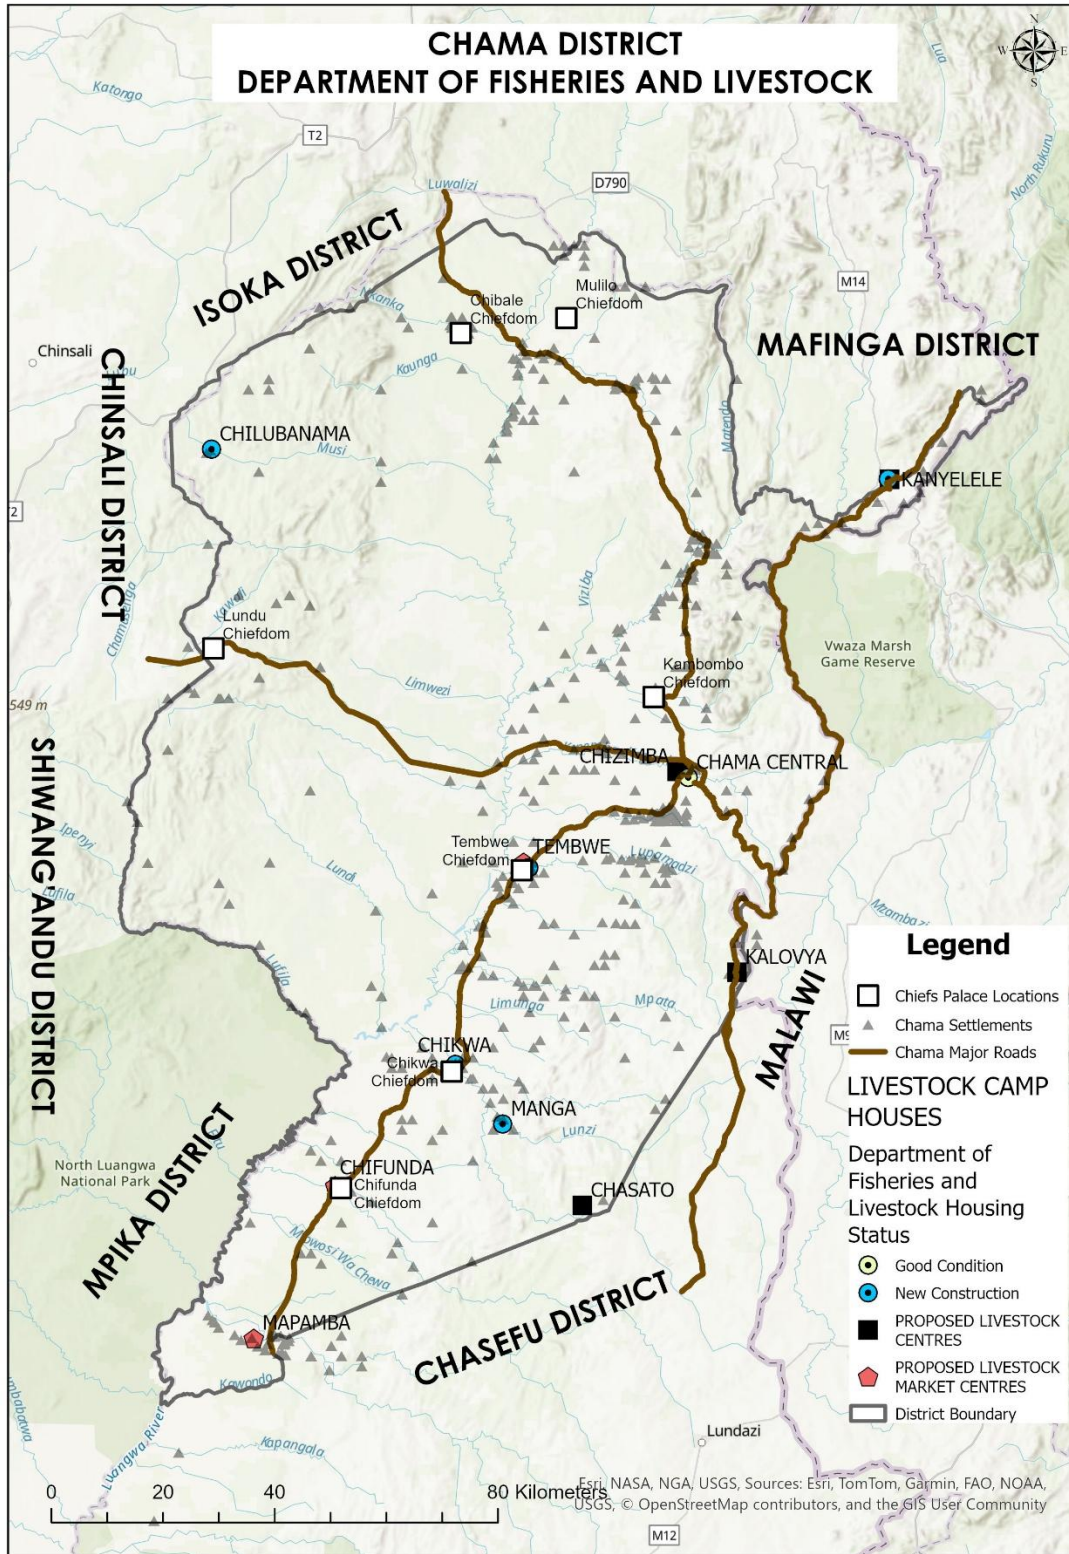

Table 10: Proposed Areas of Future Demand and Communities

S/N	PROPOSED PROJECT	PLAN TARGET	ACTUAL AREA	COMMENTS
1.	Construction of Livestock centres	4	Kalovya	Livestock service centres have various tiers. Tier 1 recommended
			Kanyebele	
			Chasato	
			Chizimba	Not functional. Tier 1. Feed trough, water trough, and crash pen only
	Construction of Livestock market centres	4	Chifunda	FSZ, DNPW. Council's responsibility. High inflow of people coming in to fish but some are poachers
			Mapamba	A very good fish area due to the Luangwa River

			Chikwa – Centre	

Source: Livestock and Fisheries Department (2024)

Spatially, Map 5 gives context to the availability of services, and the areas of need for the service under this sector.

Impact of Ongoing Development Programmes on Land Use and Population Distribution Patterns

The sustained growth trajectory of the sector is anticipated to have a profound impact on land utilization patterns within the district. Specifically, the increasing demand for land to establish critical infrastructure such as dams, weirs, and fish ponds is expected to drive changes in land use. Consequently, population distribution is likely to remain concentrated near and within farm blocks, as farmers tend to reside in close proximity to their fields to facilitate ease of access, monitoring, and security against potential threats.

Impact of Environment and Climate Change

The fisheries and livestock sector, akin to other sectors, is susceptible to the far-reaching consequences of climate change. As illustrated in Table 11, the sector is significantly impacted by environmental factors and climate change, underscoring the need for adaptive strategies to mitigate these effects.

Table 11: The Impact of Environmental and Climate Change Issues on the Sector

Environment and climate change	Impact on the sector
Floods	Causes disease in livestock Destroys the grazing field for animals leading to animal migration Damage to infrastructure
High temperatures	Causes disease in livestock Reduction of water levels affecting fish farming adversely

Source: Chama Town Council (2024)

Furthermore, climate change is exacerbating the mutation of animal diseases, thereby posing a significant challenge to animal husbandry practices and ultimately impacting livestock productivity in the district".

However, the sector has the following impact on the environment;

- ✓ Fish ponds become breeding grounds for mosquitoes
- ✓ The livestock sub-sector generates more greenhouse gas emissions causing climate variability
- ✓ Underground water pollution
- ✓ Soil degradation from intensive grazing
- ✓ Bycatch and discarding non-target species in fisheries

Issues Arising Relating to Gender Groups and Vulnerable Groups

The sector has made significant strides in promoting a gender-balanced society by increasing women's access to livestock and fisheries inputs. Over 500 women are currently benefiting from government-supported programs such as the TRALARD project, SCRALA and Food Security Pack (FSP), and there's been a notable increase in women's participation in fish farming due to policy reforms. Additionally, the sector has seen a rise in youth participation, with over 3,500 youths supported through the Constituency Development Fund (CDF). Efforts have also been made to support differently abled persons, with over 100 individuals benefiting from various government programmes such as CDF.

External Factors Contributing to the Issue

The livestock sector in Chama is facing significant challenges due to wildlife conflict, which has a detrimental impact on livestock production. The presence of wild animals in the area makes it extremely difficult to rear livestock, as they are frequently attacked and killed. Furthermore, the outbreak of swine fever has had a devastating effect on pig farming, resulting in high mortality rates and making it unsustainable for farmers to continue keeping pigs.

Core issues from the sector

The livestock and fisheries sector in the district is hindered by insufficient infrastructure and inadequate staffing, which severely limits the effective management and control of livestock and fisheries resources.

COMMERCE AND TRADE

Commerce and trade drive economic development by creating business and consumer opportunities. Chama's local economy is underdeveloped, relying heavily on subsistence agriculture and local trade, resulting in limited municipal resources. However, opportunities for growth exist in sectors such as transport, agriculture, livestock, fisheries, tourism, mining, and energy, which could help stimulate economic development.

Key Government Priorities to Be Implemented at A Local Level

Key Priorities of Sector Specific National Plans/Strategies and how they are to be implemented at a Local Level

In Chama district, the focus is on improving transportation networks and facilitating trade, these initiatives support the district's economic growth and contribute to achieving national commerce and trade objectives. Sector specific plans being implemented in Chama district

- ✓ Zambia Development Agency Act No. of 2006
- ✓ The Small and Medium Enterprise Policy of 2016
- ✓ National Trade Policy of 2018
- ✓ Commercial Trade and Industry policy of 2009
- ✓ Eighth National Development Plan (2022-2026)

Assessment of the Existing State of Development

The assessment of Chama District's commerce and trade sector reveals that market accessibility is limited, which restricts local producers' ability to reach larger markets. Business development is slow, with few initiatives to promote entrepreneurship and expand local businesses. Additionally, access to financial services is inadequate, making it difficult for businesses and individuals to secure the necessary funding for growth and investment.

Availability of Services Relevant to this Sector

The economy of Chama is primarily driven by subsistence agriculture and local trade, with a limited range of supporting infrastructure, including retail establishments, financial services, and hospitality facilities. The district's remote location and underdeveloped status hinder the growth of economic activity, constraining the potential for market expansion and diversification.

Markets

Chama District has a single gazetted market located in Kamphemba Ward, while five other markets (Tembwe, Chikwa Chibale, Kanyebele, Kambombo, and another) remain ungazetted. The district also features several growth nodes, including Kaozi, Muyombe Turnoff, Lundu, Katangalika, Mulilo Kalovya, Chifunda, and Mapamba.

Banking Facilities

Chama District has limited banking services, with only one non-commercial bank, NATSAVE, operating in the area. However, several other financial service providers are available, including GS salary advance, Totten gram financial

services, ZOONA, Zanaco agents, and mobile money services such as Airtel Money, Zamkwacha, and MTN Money.

Trade

The trading activities in Chama are dominated by small-scale entrepreneurs engaged in various retail businesses, including hardware, building materials, groceries, and foodstuffs such as rice, fish, maize, and vegetables. These commercial activities are concentrated in the Central Business District (CBD) and growth centres throughout the district.

Cooperatives

Chama District has approximately 540 cooperatives engaged in various economic activities, primarily maize cultivation and trading. The district has benefited from the Presidential Solar Hammer Milling Initiative, with 9 solar milling plants allocated, 65% of which are operational. The initiative is implemented by the Zambia Cooperative Federation, with support from the Department of Cooperatives and Entrepreneurship. Additionally, banking institutions provide loans and mortgages to promote business growth, with 80 cooperatives among those that have received funding.

Gas Service Stations

As of 2024, Chama district faces a significant challenge in accessing fuel, with no operational gas service stations within its boundaries. Consequently, residents are forced to procure fuel from neighboring Lundazi district. Furthermore, the local market is plagued by illegal fuel vendors, exacerbating the situation. Despite interest from prospective investors to establish a gas station in Chama, the poor state of the road network has hindered the transportation of fuel, thereby deterring investment in this critical infrastructure. Addressing the road network

challenges is essential to attracting investment and improving access to fuel in the district.

Issues from Public Participation Process

Chama district faces several challenges hindering its economic growth. Key issues from the public engagement included inadequate markets and trading spaces, insufficient storage and processing facilities for rice production, high commodity prices due to poor road networks, limited banking services in rural areas except for Kamphemba ward, face challenges in accessing financial services, hindering their ability to benefit from government initiatives such as CDF grants and loans, and poor network connectivity.

Several wards in Chama District face network challenges that hinder access to financial mobile banking services. In Chama South, affected wards include Mapamba, Chilenje, Lunzi, Chipala, Vilimukulu, and Lumezi. Meanwhile, in Chama North, areas with network difficulties comprise parts of Muchinga, Mazonde, Nkhankha, Luangwa, Chisunga, and Ndunda. These connectivity issues pose significant obstacles to the efficient use of mobile banking services in these districts.

Impact of Changes Anticipated Over the Next Ten Years

Chama district faces a significant challenge in meeting the minimum requirement of having at least one market per ward. Currently, only Kamphemba ward has an officially recognized market, leaving a shortfall of 23 markets. To address this, market infrastructure development is underway, including the construction of the Tembwe Market shelter in Mabinga Ward and the Chibale Market shelter in Nkhankha Ward.

Chama District has identified 13 areas with high economic potential, designated as growth nodes. These areas are categorized into two tiers: Major Growth Nodes (6 areas) and Secondary Growth Nodes (7 areas).

Table 12: Major and Secondary growth nodes in the district

Major Growth Nodes: - <i>Chibale</i> - <i>Lundu</i> - <i>Kalinkhu</i> - <i>Kambombo</i> - <i>Chikwa</i> - <i>Chifunda</i>	Secondary Growth Nodes: - Kanyelege - Katangalika - Tembwe - Kalovya - Chasato - Manga - Kalasa
--	---

Impact of Ongoing Development Programmes on Land Use and Population Distribution Patterns

Chama District is poised for significant transformation over the next decade, driven by ongoing investments and development programs in commerce and trade. Population projections indicate that major growth nodes will attract the majority of the population, leading to increased demand for land and the conversion of agricultural and undeveloped land into commercial zones. This is expected to spur urbanization, drive infrastructural development, and potentially create new commercial corridors, ultimately reshaping the district's land use and population distribution patterns.

Impact of Environment and Climate Change

Climate change and environmental degradation are increasingly impacting Chama District's commerce and trade sector. Unpredictable weather patterns and environmental degradation, such as deforestation and soil erosion, compromise agricultural production, market dynamics, and the sustainability of

natural resources. This threatens the economic resilience of local traders and businesses, necessitating climate-resilient adaptations and diversification strategies to mitigate these impacts.

The growth of Chama District's commerce and trade sector poses significant environmental risks, including deforestation, land degradation, habitat disruption, and increased carbon emissions. Unsustainable agricultural practices and infrastructure expansion may exacerbate soil erosion and biodiversity loss, accelerating environmental degradation and climate change impacts. Integrating sustainable practices and environmental safeguards into sector development is critical to mitigating these risks.

Climate change poses significant risks to Chama District's commerce and trade sector, threatening agricultural production, infrastructure, and natural resources. Erratic weather patterns, infrastructure damage, and resource degradation may lead to reduced yields, supply chain disruptions, and declining economic resilience. Proactive adaptation strategies are essential to mitigate these impacts and ensure the long-term viability of the sector.

Issues Arising Relating to Gender Groups and Vulnerable Groups

Chama District's commerce and trade sector faces significant social inclusion challenges. Women and girls face barriers to economic opportunities due to limited access to capital, land, and education. Youth, particularly those with disabilities, require targeted support to develop skills and access finance. Furthermore, the district's HIV/AIDS-affected population needs inclusive trade policies and workplace health programs to access stable income opportunities. Addressing these social inclusion challenges through targeted interventions will be crucial to ensuring equitable economic growth, improving quality of life, and promoting a thriving local economy.

External Factors Contributing to the Issue

External factors contributing to a lack of access to markets and participation in the regional economy include;

- ✓ A lack of capacity to work on major road infrastructure projects such as the Luangwa and Kamphemba bridges as a district,
- ✓ Roads in dilapidated state outside the district's jurisdiction such as the Chama-Lundazi Road,
- ✓ Setting of prices on the market
- ✓ Fuel price fluctuations,
- ✓ Electrical power generation, transmission, and distribution
- ✓ Climatic impacts such as droughts and floods

HOUSING SECTOR

The housing sector in the district involves construction, development, and management, purchasing, selling, and renting of property, engaging stakeholders such as developers, government entities, NGOs, and companies. The focus will include implementing priorities from the 8th National Development Plan (8NDP), National Housing Policy, and District Implementation Plan along with assessing environmental impacts of current developments on climate change, gender-related issues, and external factors affecting the sector.

Key Government Priorities to Be Implemented at A Local Level

Chama district is currently facing a housing crisis as there is limited good standard housing infrastructure for local residents as well as government departments and institutions providing various services to the district. As a result, this has affected the quality of life and service provision; Impacts such as floods and natural disasters in both Chama North and Chama South constituencies have further

amplified this issue (Vilimukulu and Lunzi ward floods in 2019, Heavy rainfall and winds in Lundu Chiefdom in 2024 among others). Ripple effects of these impacts affected the social wellbeing of victims during these trying times.

As a response to this issue, the government at district level has prioritized the increase of access to affordable and standardized housing units as well as improving the security of land tenure for different social groups; As a road map, the 8NDP and National Housing Policy will guide the district's action toward addressing this issue. The stated priorities are to be actualized through government interventions such as the land development fund, construction of housing units for public facilities through means such as the CDF, establishment of planning agreements, and housing programmes supported by non-governmental organizations. In addition, these interventions are collaborative and will involve the collective effort of all government departments and relevant stakeholders within and beyond the district during the planning period.

The expected outcome is a reduction in housing deficiency, mitigation of housing related social issues, improved resilience to climatic impacts and disasters, and enhanced land tenure security for district residents as well as both public and private institutions.

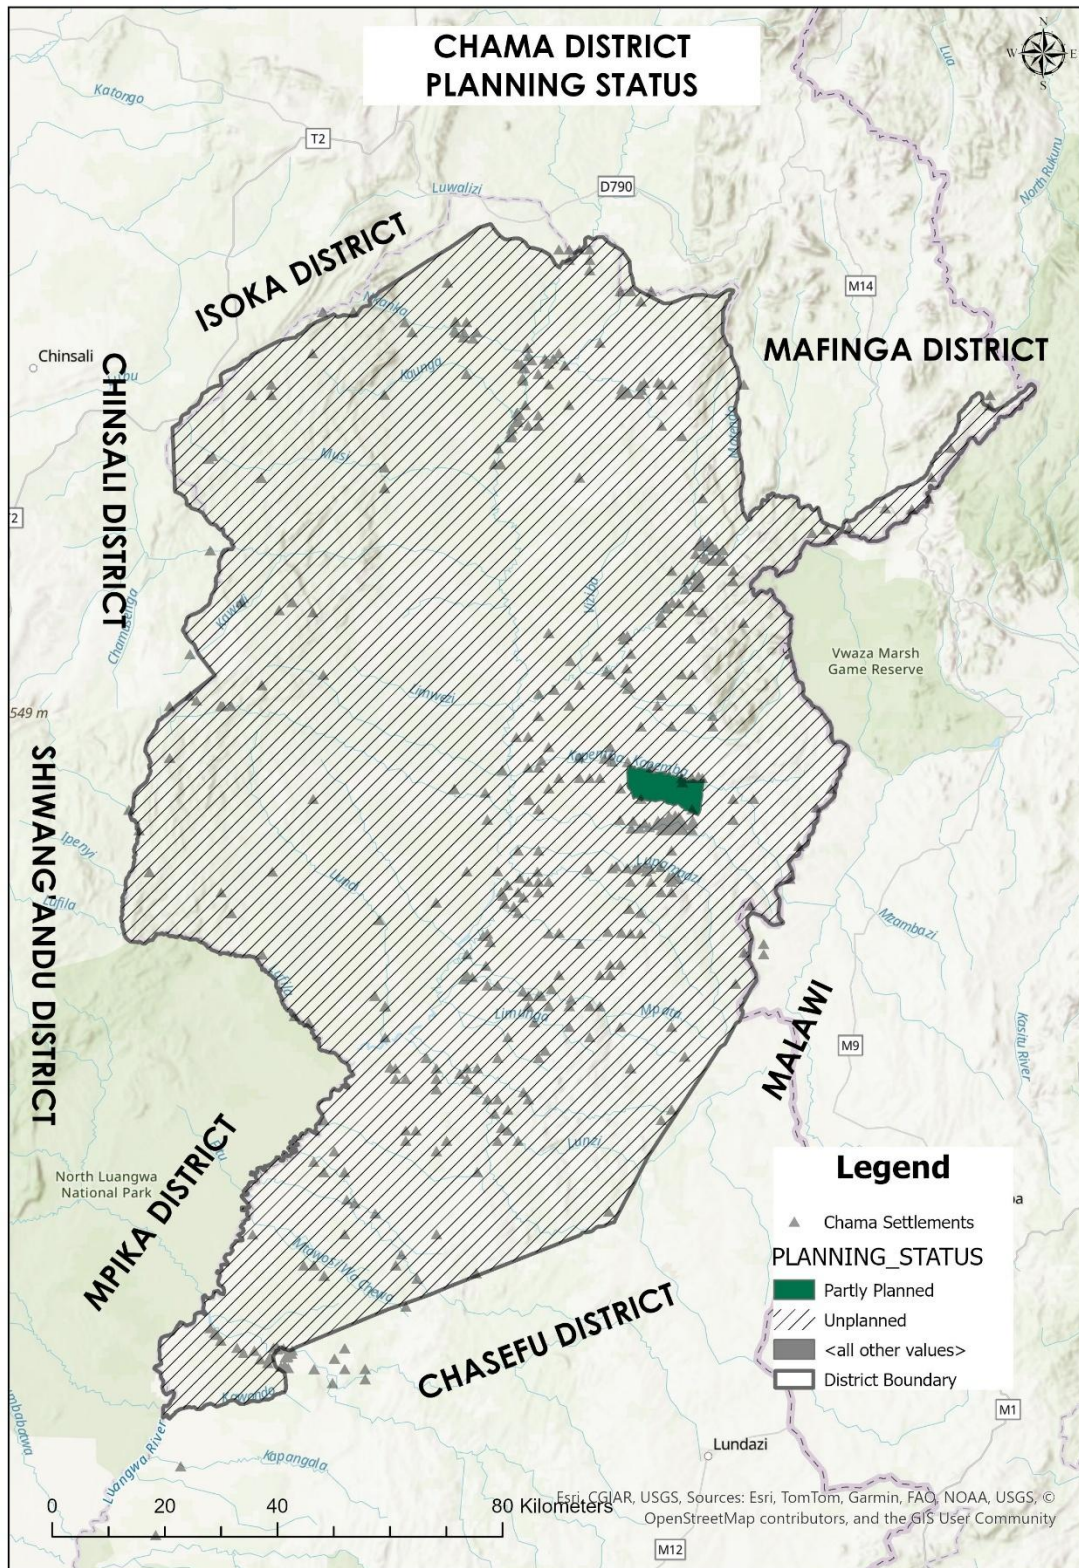

Description of the existing state of development

The following section looks at the state of development of the housing sector in Chama district, the key performance indicators, and how the district is performing at the current moment.

Availability of services

As one of the basic human rights, housing is a priority of the government and a service to be appreciated by the public. As it stands, only 2273 households in

Kamphemba ward which is 8% are within planned state land and can acquire certificates of title while the remaining 25,884 which is 92% are on customary land (Chama Town Council, 2024). As shown in Map 6, the remaining 23 wards are in need of planning services for planned settlements and coordinated housing infrastructure development.

Quality of services

When it comes to the quality of the services delivered with regards to housing infrastructure, the district takes into consideration a number of parameters as prescribed under the Dioxiadis zoning code standards developed for Lusaka Province; The parameters include the type of construction material, availability of sanitary amenities (Wash rooms), availability of piped water, availability of electricity, and tenure of dwellings.

An analysis of the district's housing infrastructure shows that, only the few households 2,273 (8%) within the planned area located in Kamphemba ward are preview to standardized housing units. Though a few other settlements in various locations across the district have been adopting building standards under customary land. This is attributed to the advantages such as central location, access to construction material, presence of public utility services (water and power supply), and possibility to acquire ownership documentation.

Issues arising from public participation process

While availability or access to quality standard infrastructure is a significant issue on its own, the quality of the present infrastructure equally requires attention too. Chama district's communities brought out a number of factors on this matter. Some factors cut across other sectors; this includes issues with transportation of building materials, poor road network, which in turn affects commodity prices, and subsequently may lead to compromise on the use of standard building materials.

Other issues revolved around the acquisition of land tenure are state land or customary land. While interventions such as the ZILMIS and ZAMPAY platforms have made land administration easier, preliminary issues on the ground have

presented a challenge to facilitate for land acquisition; Discrepancies between the general layout plan and current development status on the ground.

Impact of Changes Anticipated Over the Next Ten Years

With the projected and anticipated population growth, the following section looks at the anticipated need of the district under the housing sector.

Quantify Future Demand for Services and Facilities Based on the Estimates of Population Change

Based on the calculated projected population of 194,072 (38,814 households) of Chama district in the year 2035 (Chama district, 2024), the population will place a significant demand for housing infrastructure.

The Doxiadis zoning code standards, initially designed for Lusaka Province, use parameters like population, population density, and household counts to determine land requirements for residential plots. Chama district took a leaf from Nakonde district that applied these parameters, using a Housing and Community Infrastructure Calculator, to assess housing needs.

$$\left(\frac{\text{Population}}{\text{Average People Per Unit}}\right) \times \left(\frac{\text{Density ratio of 4:3:1 in \%}}{100}\right)$$

Based on the current and projected populations, the district tabulated the anticipated need for housing infrastructure shown in Table 13.

Table 13: Anticipated need for housing infrastructure in the district by 2035

USERS IN NEED OF HOUSING	FUTURE DEMAND FOR HOUSING
CHAMA DISTRICT PUBLIC HOUSING	RESIDENTIAL HIGH COST – 19,407
	RESIDENTIAL MEDIUM COST – 14,555

	RESIDANTIAL LOW COST – 4,852
AGRICULTURAL CAMP STAFF HOUSES	71
VETERINARY CAMP STAFF HOUSES	7
FORESTRY CAMP STAFF HOUSES	5
EDUCATION STAFF HOUSES	1171
HEALTH STAFF HOUSES	572
SECURITY STAFF HOUSES	14

Source: Chama Town Council (2024)

Assessment of the Likely Impact of Ongoing and Committed Investment and Development Programmes on Land Use and Population Distribution Patterns

Based on the established need for housing infrastructure, there is anticipated an immediate need for land-use planning services in the identified growth node areas. These have been identified as major growth nodes attributed to the growing population, economic activities, growing demand for various public services and proposed programmes including projects in other sectors.

Impact of Environment and Climate Change

Chama District's development trajectory is driven by the Agricultural and Commerce and Trade sectors, with key growth areas experiencing rapid population growth and urbanization, namely Chibale, Lundu, Kambombo, Tembwe, Chikwa, and Chifunda. However, this growth has come at a significant environmental cost, including increased carbon footprint, energy consumption, and loss of biodiversity. Climate change impacts, such as flooding, are already being felt, particularly in vulnerable areas like Lunzi ward. Urgent attention is needed to address these environmental and climate change challenges, and to ensure that Chama District's development path is sustainable and resilient.

Issues Arising Relating to Gender Groups and Vulnerable Groups

Housing shapes community experiences, especially for vulnerable groups like women, youth, and the differently abled.

1. **Women and Girls:** In Chama District, housing shortages mean female students and women attending skills training face risks like gender-based violence when forced to live in unsafe areas. Although changing norms have improved women's access to land, they still face significant challenges around affordability and safety.
2. **Men and Boys:** Stable housing provides men with mental well-being, a sense of pride, and community security. Lack of affordable housing can lead to homelessness, social isolation, and crime, particularly among low-income men.
3. **Youth:** Young people need accessible housing for job opportunities and personal growth. In Chama, high demand for limited housing creates inequalities, pushing youth to migrate for better prospects and potentially weakening local development.
4. **Differently Abled:** Housing infrastructure often fails to meet accessibility needs, limiting the economic opportunities and social inclusion of those with disabilities.

Addressing these issues is crucial to fostering community stability, safety, and economic development.

WATER AND SANITATION SECTOR

The Water and Sanitation sector is responsible for development and management of water resources, provision of clean water supply and adequate sanitation in the district. This sector provides a review on existing plans and

strategies that govern the performance and highlights the core issues affecting sector development in the district.

Key Government Priorities to Be Implemented at a Local Level

The Chama district faces significant challenges due to inadequate clean water supply and underdeveloped sanitation infrastructure. These issues lead to disease outbreaks, environmental degradation, poor economic growth, and food insecurity. Residents often rely on shallow wells and pit latrines, increasing the risk of waterborne infections, especially during floods.

To address these problems, Chama has outlined two main priorities aligned with national development plans: enhancing water resource management through increased investments and improving access to clean water and sanitation. Efforts will include establishing water points, constructing dams, developing water schemes, installing hand pumps, and promoting community awareness on sanitation practices. Implementing these strategies aims to improve public health, sanitation, and the overall economic conditions in the district.

Description of the existing state of development

The overall performance of water and sanitation sector in the district can be described as below average. It is below the set target of 90% both for water supply and sanitation.

Urban Water Supply

Public water supply and sanitation are essential for socio-economic development. The Eastern Water and Sanitation Company Limited (ESWC) provide piped water in urban and peri-urban areas, servicing 1,080 customers and 188 households through three kiosks. However, 10,998 households in these

areas rely on boreholes and do not receive piped water from ESWC. Areas lacking access to piped water include Chimwemwe, Makeni A and B, Mtayachalo compound, Hospital Area, Magroceries, Kazenga, Chizimba, parts of Lukombozi, and sections of East Rise. This urban network is as shown in Figure 6.

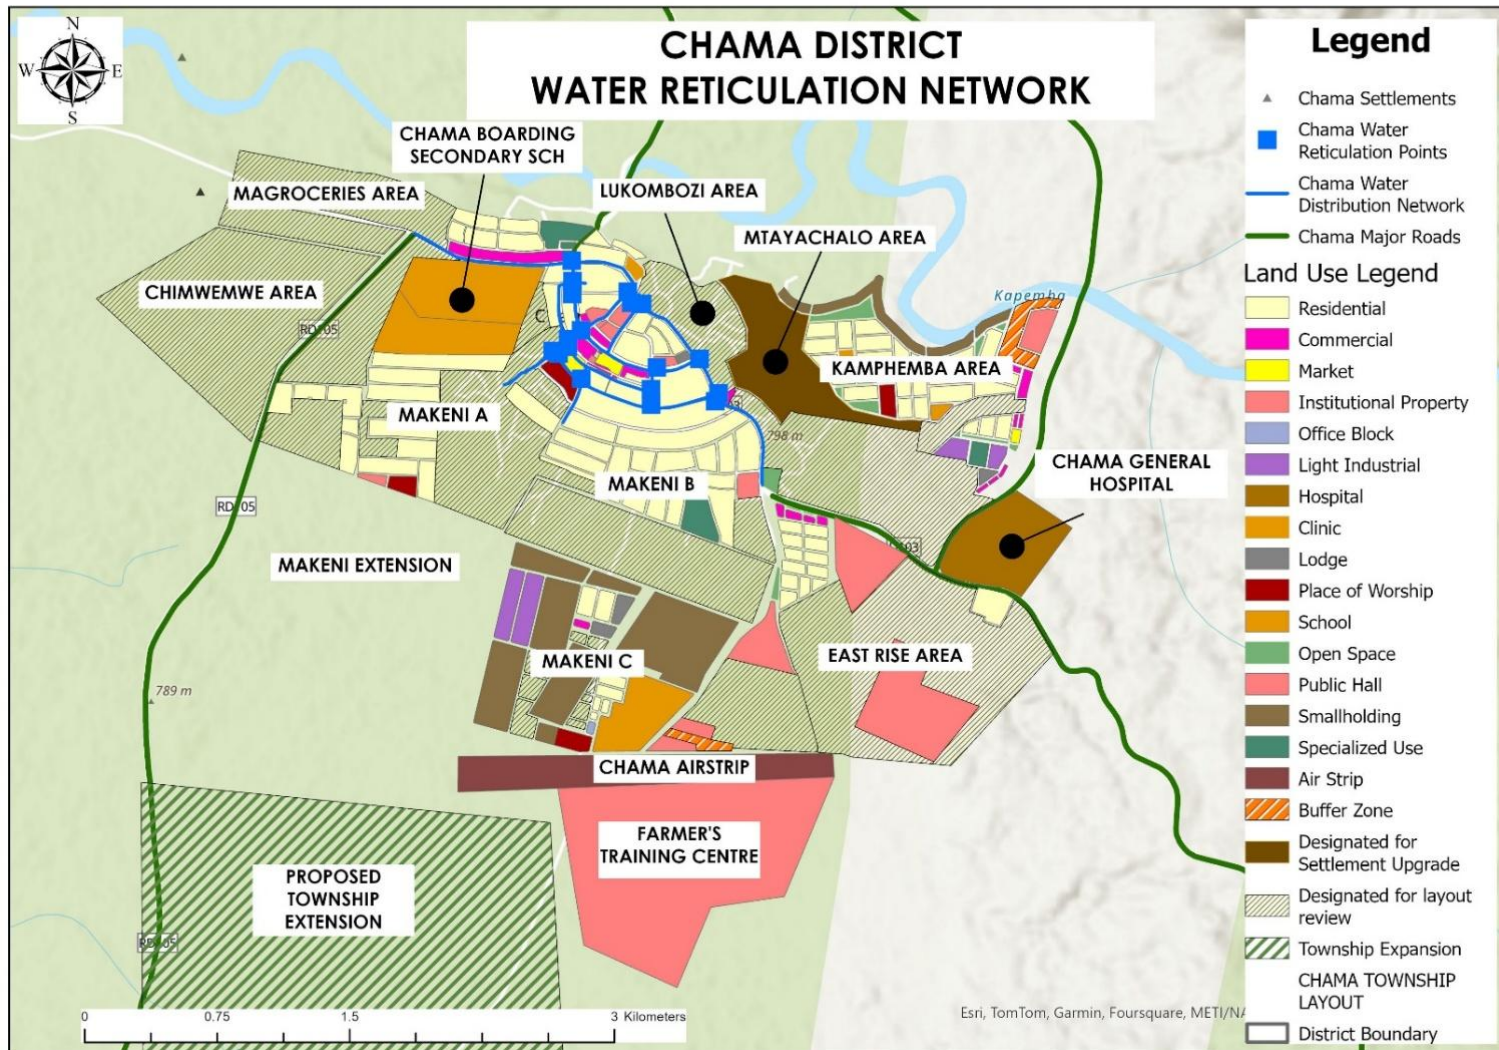

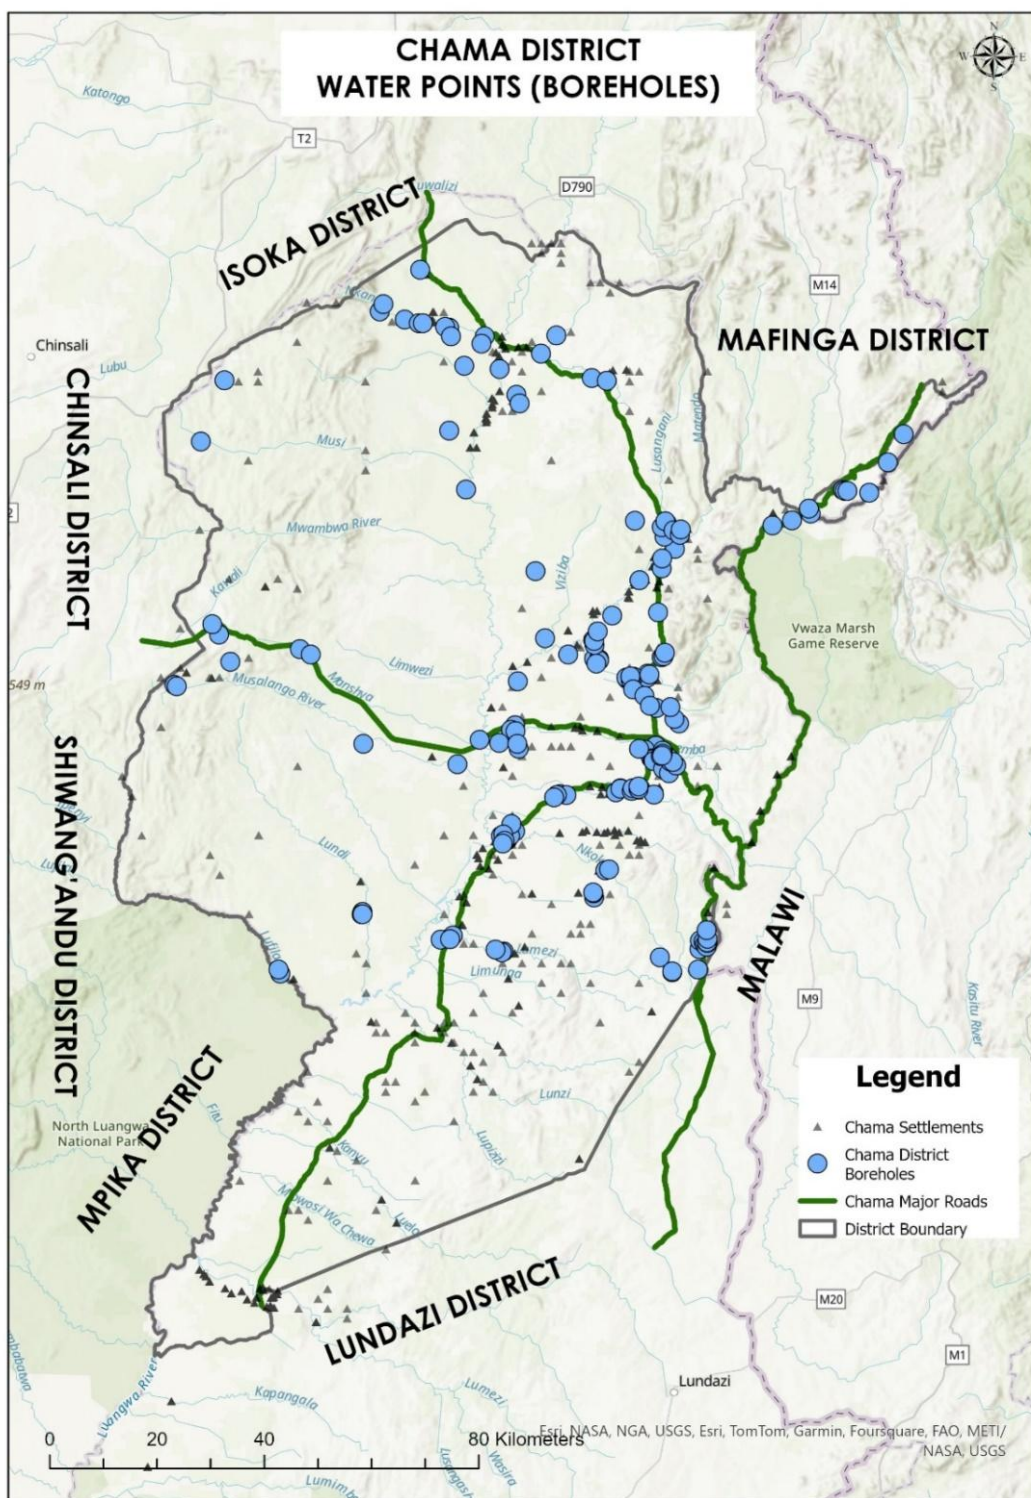

Figure 6: Layout of the Urban Water Reticulation Network

Source: EWSC (2024)

Rural water Supply

Chama District has a total of 471 functional boreholes serving a population of 140,326. However, 66 boreholes are non-functional, contributing to water access challenges. The distribution of boreholes is uneven, with Kamphemba, Mwalala, Lumezi, Lupamazi, and Kalinkhu wards having a higher concentration of water points, while other wards face inadequate access to clean water as depicted in Map 7.

Map 7: Chama District Water Points
Source: DWSD Chama District (2023)

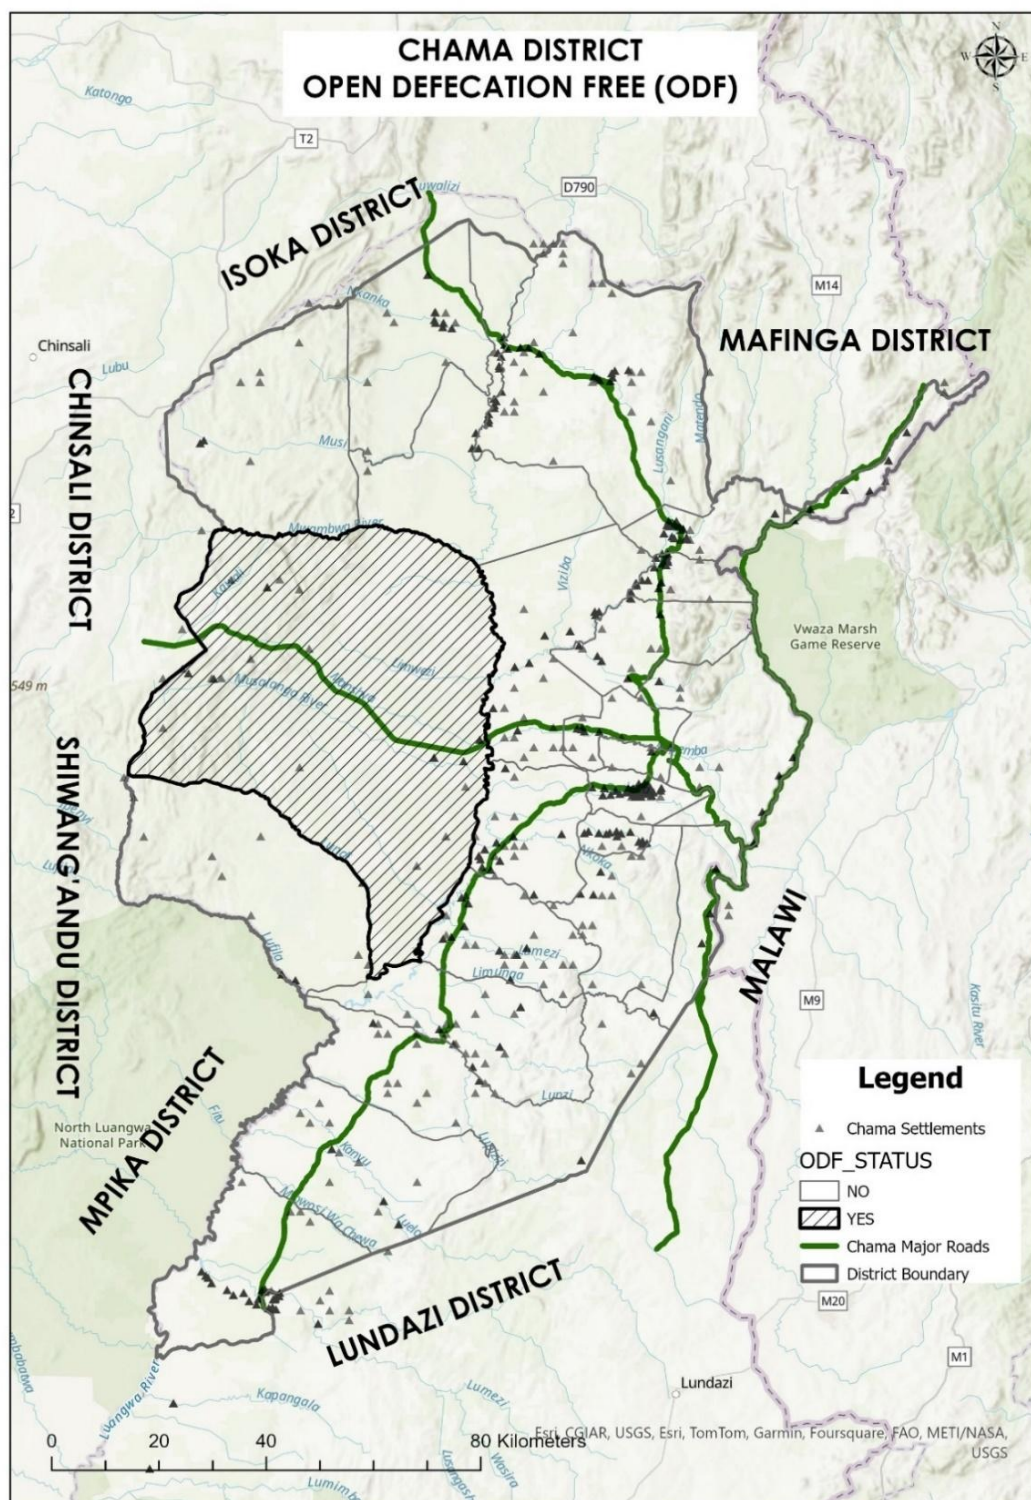

The Local Authority, in collaboration with partners like World Vision Zambia, UNICEF, and the TRALARD project, is enhancing access to safe and adequate water in rural areas. UNICEF and the Local Authority installed 57 boreholes funded through the CDF to improve water supply. In 2022, World Vision Zambia drilled 17 boreholes in Chikwa and Chifunda Chiefdoms as part of the Chikwa WASH project and aims to complete 52 boreholes (22 mechanized, 30 with hand pumps) over the next two years. The TRALARD project built 25 mechanized water systems to support vulnerable communities, while Reformed Open Community Schools (ROCS) rehabilitated 14 boreholes in community schools.

Urban Sanitation

Chama District lacks a public sewerage system, and most households rely on onsite treatment methods like septic tanks and soak ways for waste management. The district also does not have skip bins or adequate waste storage facilities for temporary disposal by traders and residents. With the urban population growing, there is a pressing need for investment in sanitation infrastructure to enhance sanitation for individual homes.

Rural Sanitation

In order to enhance sanitation levels in the rural areas, the Local Authority in cooperation with World Vision is running an Open Defecation Free status attainment programme in all the 6 wards in Chikwa and Chifunda. As it stands, only Lundu Chiefdom has been certified as Open Defecation Free (Map 8).

Map 8: Map depicting the ODF status
Source: Chama Town Council (2024)

Issues arising from public participation process

The situation in Chama District is dire, with most areas lacking access to clean water and sanitation services. Even where these services are available, they're often inadequate. This is particularly concerning in public institutions like schools and health facilities. For instance, out of 160 schools, only 8 have waterborne toilets, and 79 schools have access to clean water. More than 60% of health facilities in the district also lack these essential services. However, with the enhanced Constituency Development Funds (CDF) and other interventions, there's hope for improvement. The government's efforts to address these challenges, such as the construction of dams and boreholes, are crucial steps towards ensuring access to clean water and sanitation services for all

Impact of Changes Anticipated Over the Next Ten Years

One of the given and fundamental anticipated changes over the next ten years is population growth. Based on the calculated population projection, Chama district is to reach a population of 194,072 by 2035. This will place a demand for an additional water point, the extension of the current water supply network, and the establishment of functional sanitation facilities and infrastructure across the district. Furthermore, there is a need to consider significant investment in parallel infrastructure development to cope with the anticipated need for water supply in other sectors such as agriculture, industrial, and health among others.

Future Demand for Services and Facilities Based on the Estimates of Population Change

The increase in Population in the next ten (10) years based on the district's calculation indicates a growth of up to 194,072 residents at a growth rate of 2.5%. This entails that the district should plan for supply of water to 38,814 households across the district. Based on the analysis of the current water point coverage, 136

additional water points are needed to adequately supply the current population at 140,784 (28,157 households) and approximately 837 water points for population at 2035 (Chama district, 2024). Sanitation services will need to be supplied to the projected population across the district.

Impact of Ongoing Development Programmes on Land Use and Population Distribution Patterns

The ongoing construction of water schemes and boreholes in Chikwa, Chifunda, and Chama North aims to enhance water access in the district, while the ODF (Open Defecation Free) program in Chama South is set to improve health and hygiene. Despite these efforts, there is a lack of strategic investment in sanitation infrastructure, leading to substandard stayaways and septic tanks, as well as numerous pit latrines and shallow wells that could compromise water quality. Population patterns are expected to remain consistent, with urban areas and rural zones near water sources experiencing continued growth, potentially resulting in encroachment on sensitive areas like the Kamphemba river buffer zone and groundwater well fields due to land shortages.

Impact of Environment and Climate Change

Implementing projects such as Dam construction poses several environmental challenges including Habitat Destruction. Dams can flood large areas of land, resulting into destruction of natural habitats for various species of plants and animals, Agricultural fields and infrastructure. Prior to construction, a lot of trees maybe cut down during and after construction of the Dam. This can lead to loss of biodiversity and disrupt ecological balance.

Primitive practice trends such as Open Defecation will significantly affect the preservation of the environment for future generations because groundwater may be contaminated.

Addressing these challenges requires careful planning, comprehensive Environmental Impact Assessments, and implementation of Mitigation measures such as habitat restoration efforts. Engaging with the local communities and stakeholders throughout the planning and implementation process will be essential.

Issues Arising Relating to Gender Groups and Vulnerable Groups

In Chama District, traditional roles place a heavy burden on women and girls for household chores like fetching water, often requiring long, exhausting journeys. This affects girls' education, as they spend substantial time gathering water instead of attending school. Boys are also affected, as they often assist with water collection, impacting their schooling and well-being.

Youth, the largest demographic, face inadequate water and sanitation infrastructure, although existing facilities are generally inclusive. The elderly and disabled encounter access challenges at hand-pump water points, experiencing discrimination and limited hygiene access. Women and vulnerable groups also lack awareness about cross-cutting issues like HIV/AIDS, with some falling victim to exploitative situations involving contractors on water projects.

Addressing these issues demands infrastructure improvements, better sanitation, and gender equality efforts.

External Factors Contributing to the Issue

The major external factor contributing to these issues is inadequate investment in the water and sanitation sector and erratic funding of programmes in the water sector. The lack of spatial analysis in the distribution of water points has contributed to the identified issue. This has caused biased drilling and installation of boreholes in the rural parts of the district. There are other notable factors

contributing to the issues such as unplanned settlement under housing sector affecting issues of water and sanitation. Attaining Open defecation free (ODF) status has been an issue in rural areas due to noncompliance of community members and lack of support from Traditional leaders as major external factors. Lack of crossing points in the district has also led to inadequate water and sanitation facilities in the district.

ENVIRONMENT AND FORESTRY SECTOR

Forestry and Natural Resources sector is mandated to oversee, conserve, and preserve natural resources and protect the environment. Forests and Natural Resources are central to the achievement of a low carbon green economy and sustainable development. The following chapter looks into the environment and forest sector; Insights of this sector include governmental plans, priorities, and policies implemented at district level including analyses of the district's performance and issues raised by residents.

Key Government Priorities to Be Implemented at A Local Level

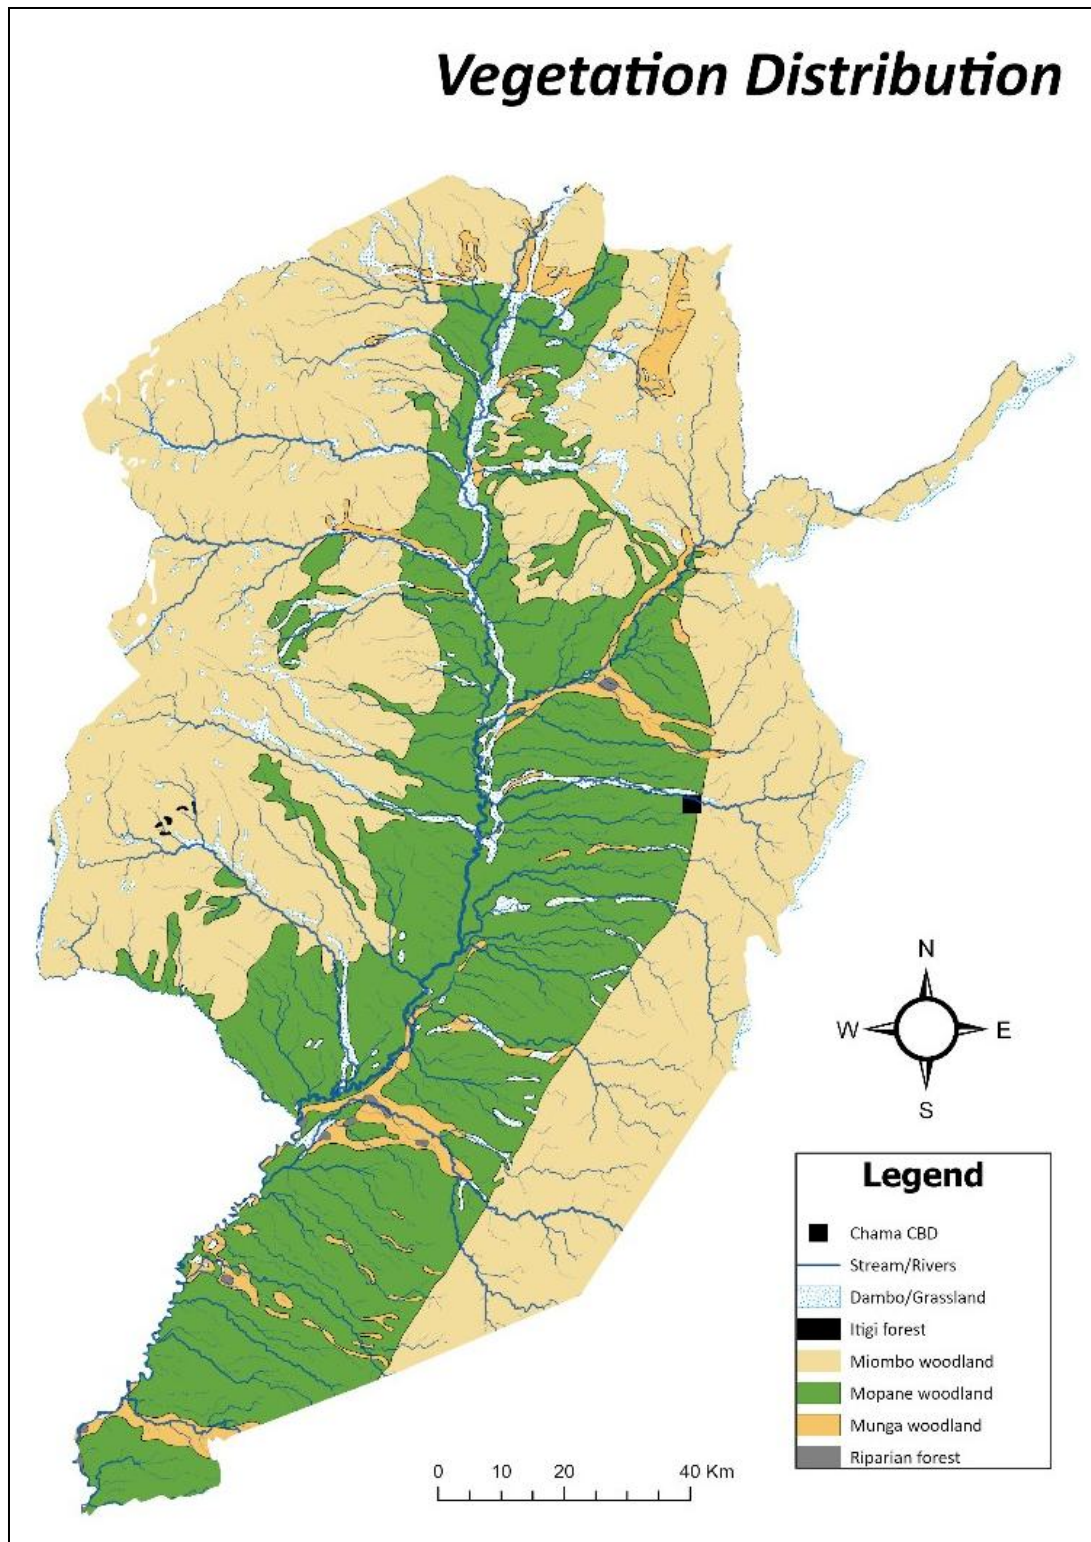

As one of the unique districts located in a game management area with a gazetted national forest, Chama faces a threat of environmental degradation which is the core issue of the environment and forestry sector. Loss of biodiversity and forest cover poses threat to the tourism industry, compromises resilience to floods and droughts, and affects good economic growth among other factors.

In order to address this issue, the government at district level has identified two key priorities; Government intends to regulate and monitor the exploitation of forest resources and industrial activities in the district and increase forest hectareage under community forest management. Through collaborative efforts among government departments and other organizations, the district will

facilitate the regeneration of forest areas, facilitate the establishment of community forest management areas, regulate and monitor the exploitation of forest resources, and enforce environmental regulations.

Description of the existing state of development

The section below gives description on the existing state of development in Chama district. As depicted in Figure 14, there are three main types of predominant vegetation under Chama District namely, (a) Mopane woodlands which are infertile and found on poor sandy loam soil, (b) Miombo woodlands, found on hilly highlands with moderate fertile soils and (c) Munga, locally known as Musangu usually found on fertile alluvial soils where human settlements are mostly concentrated. However, it is worth noting that there are also minor occurrences constituting watersheds and small patches of palm communities and traces of grass land found along the riverbanks and surrounding areas as shown in Map 9.

Map 9: Chama district vegetation distribution

Source: Forestry Department (2024)

Furthermore, an assessment of forest cover over the previous two decades from 2002 to 2022 shows that majority of the district's territory is predominantly savanna. It was also deduced that there is a case of regeneration of ever green forests particularly in Chama South over the past two decades. Deciduous Broadleaf Forest cover on the other hand has significantly declined particularly in the area of the Lundazi National Forest in Chasato and Kalovya. This can be attributed to the rise in settlements within the area. Changes in forest cover over the past two decades have been presented in Figure 7.

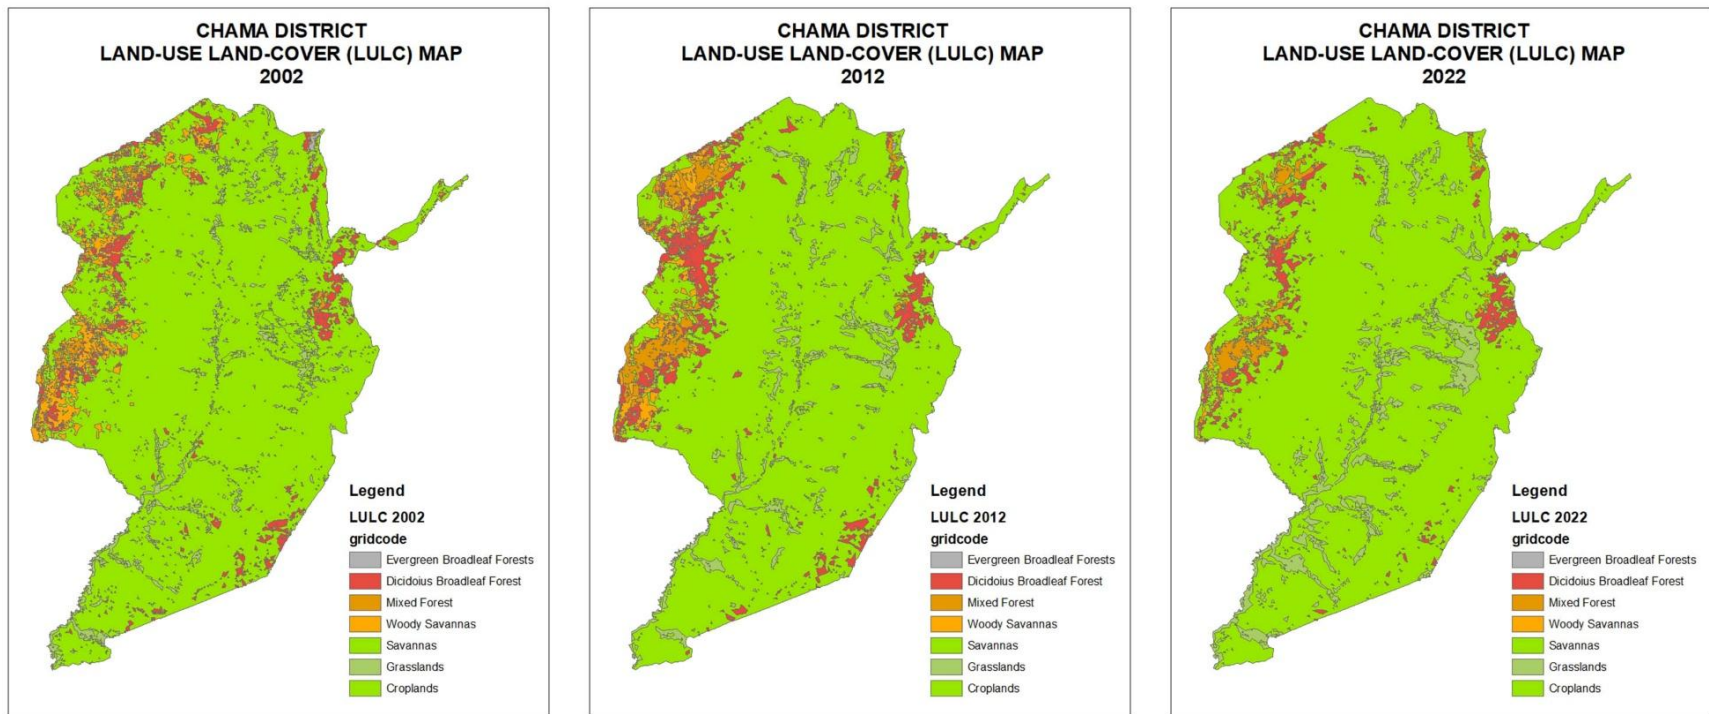

Figure 7: Land-Use Land-Cover assessment of the district from 2002 (left) to 2022 (right).

Source: Chama Town Council (2024)

Chama district maintains one (1) National Forest and four (4) local forest reserves namely Lundazi National Forest, Makutu, Chire, Fibale, and Pondo local forests covering a total of 333,566 Hectares. These protected forest reserves are distributed across the district as shown in the Table 14 and Map 10 below.

Table 14: distribution of Protected Forest Reserves

SN	Forest Reserve	Hectares	Location and current status in the district
1.	Lundazi National Forest in Chama only	289,960	This is the largest forest located along Kambombo, Tembwe & Chikwa and Chifunda Chiefdoms. Lundazi forest is heavily encroached mainly due to unsustainable agricultural practices especially in Kalovya, Sitwe, Kamfutu and Chasato area where there are several fields and farms. Notwithstanding that, the reserve has not been spared with illegal activities by surrounding villages. These illegal activities include illegal logging, illegal charcoal production, and fuel wood collection for sale and for burning bricks for construction. The district has been receiving appropriation in aid (AIA) from Muchinga provincial Administration for the past 2 years towards forest protection, community sensitisation among others.
2.	Makutu National Forest	38,849	The forest is located in along Mulilo, Kambombo and also partly in Tendele Chiefdom of Mafinga District. It is stocked, and it is on the hills.
3.	Chire National Forest	2,765	The forest is located in Kanyebele and surrounding areas in Chief Kambombo's

			chiefdom in the Northeastern direction after Bambanda sanctuary.
4.	Fibale National Forest	1,720	This forest is lies inside Chikwa chiefdom across Luangwa River between Pondo and Mwila. The forest's condition is good and it's the watershed in the Southwest of the district.
5.	Pondo Local Forest	272	The forest is in Pondo area in Chikwa chiefdom. The forest is not gazzeted.

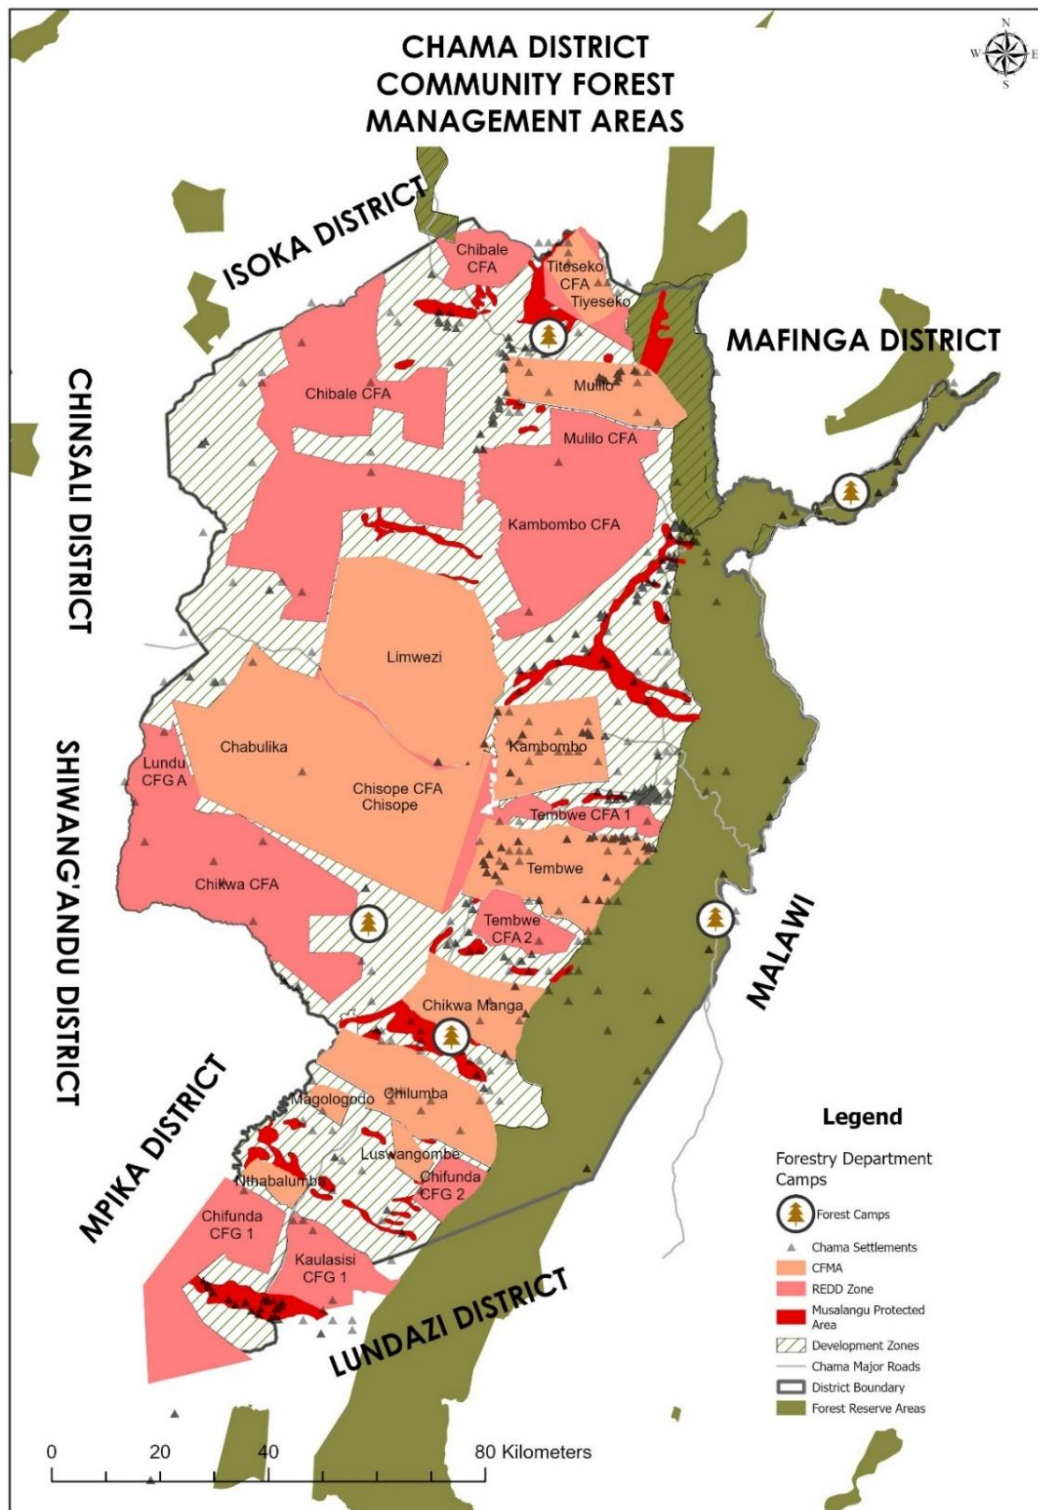

Source: Forestry Department (2024)

Chama district also maintains 17 Community Forest Management Groups with a total of 865,379 Hectares. A breakdown of the land covered has been tabulated in Table 15 and depicted in the subsequent Map 10.

Table 15: Community Forests Management

SN	CFMG Name	Hectarage	Chiefdom
1.	Chabulika	65,610	Lundu
2.	Chifunda	89,236	Chifunda
3.	Chikwa	80,357	Chikwa
4.	Chilumba	12,500	Chikwa
5.	Chisope	76,488	Lundu
6.	Kambombo	28,221	Kambombo
7.	Kambombo Nature Park	77,182	Kambombo
8.	Kamimbili	29,500	Tembwe
9.	Katenya	23,279	Tembwe
10.	Limwezi	93,782	Lundu
11.	Lundu	119,477	Lundu
12.	Luvila	81,691	Chikwa
13.	Magologodo Luswang'ombe	4,708	Chifunda
14.	Mulilo	28,838	Mulilo
15.	Nthabalumba	5,453	Chifunda
16.	Tembwe	36,745	Tembwe
17.	Tiyeseke	12,303	Mulilo
Total Hectarage		865,370

Map 10: Location of Community Forest Management Areas in Chama District.
Source: Forestry Department (2024)

Availability of services

The forestry department executes a number of functions as prescribed under the Forestry Act 2015; Functions of the Forestry department include;

1. To Identify and demarcate forest areas to be protected as National Forests, Local Forests, Botanical Reserves, Community forests and Joint Forest Management Areas.
2. Control, manage, conserve and administer Protected Forest Areas.
3. Promote methods for sustainable utilization, conservation and preservation of ecosystems and biological diversity in non- protected forest areas.
4. Develop and implement strategies for reducing emissions from deforestation and forest degradation to address impacts of climate change through mitigation and adaptation measures.
5. Establish and manage local and regional supply forest plantations.
6. Promote and provide technical support for private sector participation in the development of forest plantations, timber industry, beekeeping and non-wood forest products.
7. Conduct research on forestry and related matters.
8. Maintain a forest information management system.

In order to carry out these functions, the forestry department extends its services through a network of forest camps; the department has 5 forest camps namely Kalovya, Makutu, Chire, Fibale, and Pondo.

Forest camps in strategic areas lack officers due to insufficient housing, hindering effective environmental management and resource monitoring. The forest department relies on partnerships with other district stakeholders to perform its functions, which are restricted to shared interests with other government bodies,

such as law enforcement. Consequently, most communities, except those near Kamphemba ward, have no local forest department officer presence.

Quality of services

From the functions stated in above, the district's department has endeavored to provide quality services to the residents and stakeholders. Through collaborative efforts, the department makes amends for some of the lacked administrative capacity deficits such as limited manpower and financial resources. This has helped particularly with provision of services such as issuance of permits, facilitation for concession licenses, community capacity building, and others such as establishment of plantations and nurseries. Though as it stands, the district does not have an established plantation.

Other functions are based on the mandate to regulate the exploitation of natural resources, this involves monitoring and inspection patrols in the gazetted national forest as well as community forests. Similar to the previously stated functions, limitations include a lack of human and financial resources as well as other necessities namely monitoring vehicles, and camp staff houses among others.

Issues Arising from Community and Stakeholder Consultations

Stakeholder engagement revealed several challenges faced by communities and stakeholders. These include the lack of affordable alternative energy sources to replace or supplement the widespread use of wood and charcoal fuel. Additionally, the high cost of establishing individual alternative energy systems is especially burdensome in rural areas. The absence of forestry officers in forest camps also hinders timely access to services for natural resource exploitation and the acquisition of licenses and permits, particularly for residents in remote areas. Although carbon trading is seen as a positive development in the district, many residents struggle to embrace it due to the limited immediate benefits.

Impact of Changes Anticipated Over the Next Ten Years

Population growth intensifies the demand for forest products, such as timber, fuelwood, and charcoal, impacting the environment significantly. This increase in demand leads to deforestation, which disrupts the hydrological cycle and biodiversity, especially as forested land is converted for agriculture near water bodies. The forestry sector faces added strain from increased resource extraction, necessitating more patrols, infrastructure, and staffing to protect natural resources and combat illegal activities. Additionally, poverty exacerbates environmental degradation, as population growth amplifies pressure on natural resources, further stressing conservation efforts.

Impact of Ongoing Development Programmes on Land Use and Population Distribution Patterns

Land use change is arguably the most pervasive socioeconomic force driving changes and degradation of ecosystems. This trend will cause loss of soil fertility, loss of biodiversity, soil erosion, siltation, climate change, global warming, water and air pollution, vegetation loss, topography destruction, water table destruction and recharge zones will be affected. Population distribution pattern might cause high encroachment in protected forest reserves due to shortage of land and loss of soil fertility (shifting cultivation).

The department and other stakeholders have to work with other sectors to ensure that the right land use is achieved as well as making sure that no plots or land is falling in any protected forest area. It is also imperative that the planners, agriculture officers and forest officers see to it that adherence in terms observing farms are 50m away from streams and rivers.

Impact of Environment and Climate Change

Global climate change, driven mainly by greenhouse gas emissions, is causing rising temperatures and altering weather patterns, leading to more extreme weather events. Mining expansion, increased timber concessions, and unsustainable farming practices are further depleting forest resources, disrupting the hydrological cycle, and exacerbating climate impacts. These activities threaten conserved lands and accelerate resource depletion.

Forestry departments are tasked with revenue generation, ecosystem preservation, and biodiversity conservation. Revenue from wood and non-wood forest products, which supports rural livelihoods and provides alternative income sources, is at risk if canopy cover decreases, negatively impacting beekeeping and other forest-dependent activities. Reduced forest cover also diminishes carbon sequestration, which may alter temperatures and rainfall patterns. The department's primary focus is on sustainable natural resource management to protect these resources for future generations.

Issues Arising Relating to Gender Groups and Vulnerable Groups

Efforts in community forest management (CFM) promote gender equity, with 30% of women participating in decision-making. This inclusion reduces social and economic hardships for women, who rely heavily on forest resources like fuelwood, mushrooms, and other non-timber products. Deforestation poses a unique challenge for women, increasing their travel distances and decreasing resource availability, thus affecting livelihoods.

In beekeeping, cultural beliefs often exclude women, though they show high dedication in forest management. Support for women's beekeeping initiatives through training and resources are underway. Men's engagement in traditionally female forest activities could enhance income generation for communities.

Youth involvement in environmental programs is encouraged to instill sustainable practices. For persons with disabilities, environmental barriers restrict participation, and climate change disproportionately impacts them, heightening risks like HIV transmission during climate-related migrations.

External Factors Contributing to The Issue

Human activities like mining, industrialization, deforestation, and unsustainable farming are significantly impacting the environment by disrupting water tables, recharge zones, and ecosystems. This leads to disturbances in the hydrological cycle, contributes to climate change, and causes biodiversity loss. Over time, such disturbances may cause a shift in forest species composition, known as succession, potentially eliminating endemic species.

Climate Change and Environmental Sustainability

The district's environmental sustainability assessment focuses on the pivotal issue of environmental degradation, encompassing deforestation, threats to wildlife habitats, detrimental practices, and population growth. A comprehensive approach is employed, presenting interventions to address the core issue, alongside analyses of anticipated changes, public concerns, and external factors exacerbating environmental degradation.

Key Government Priorities to Be Implemented at A Local Level

The threat of environmental degradation was prompted proactive action from the government at district level. As such, the government has prioritized the promotion of sufficient sustainable mitigation and adaptation initiatives as well as increase access to alternative energy sources to combat climate change and enhance environmental protection. Collaborative effort will be made to secure water sources, regulate the exploitation of natural resources, reinforce

environmental regulations, and promote relocation of settlements from flood prone areas.

Description of the existing state of development and key performance indicators

The Urban and Regional Planning Regulations of 2020, under the Urban and Regional Planning Act of 2015, support development control through land use regulations for various purposes (housing, commercial, agricultural, industrial). This control incorporates environmental protection and climate change considerations for obtaining development permissions. Effective control, however, is primarily enforceable on state land (e.g., part of Kamphemba ward), with planning agreements proposed for customary land administration.

Water management in Chama is supported by the 2022–2026 Strategic Plan involving stakeholders like Chama Town Council, EWSC, and UNICEF. Activities include aquifer mapping and water point improvements. The district aims for green energy transitions via solar power plants in Lundu and Kambombo chiefdoms, but efforts require expansion for comprehensive energy sustainability.

Forest conservation is mandated by the National Forestry Act, promoting Community Forest Management Areas (CFMAs). Chama has 1 national and 4 local forests with 17 CFMGs aiding forest protection. The Game Management Plan (GMP) aligns with local Community Resource Boards (CRBs), managed by chiefs, to oversee wildlife habitat conservation across five chiefdoms.

Climate-smart agriculture covers 12,000 hectares, promoting sustainable farming to mitigate environmental impact. In an effort to mitigate climatic impacts such as floods, the district has mapped flood prone areas as depicted in Figure 17 and through the Disaster Management and Mitigation Unit (DMMU), has provided aid and relief interventions to such areas. The challenge is that settlements have developed and keep developing in flood prone areas because communities

know that they will receive food from government. Therefore, there is need for a robust resettlement plan for such areas.

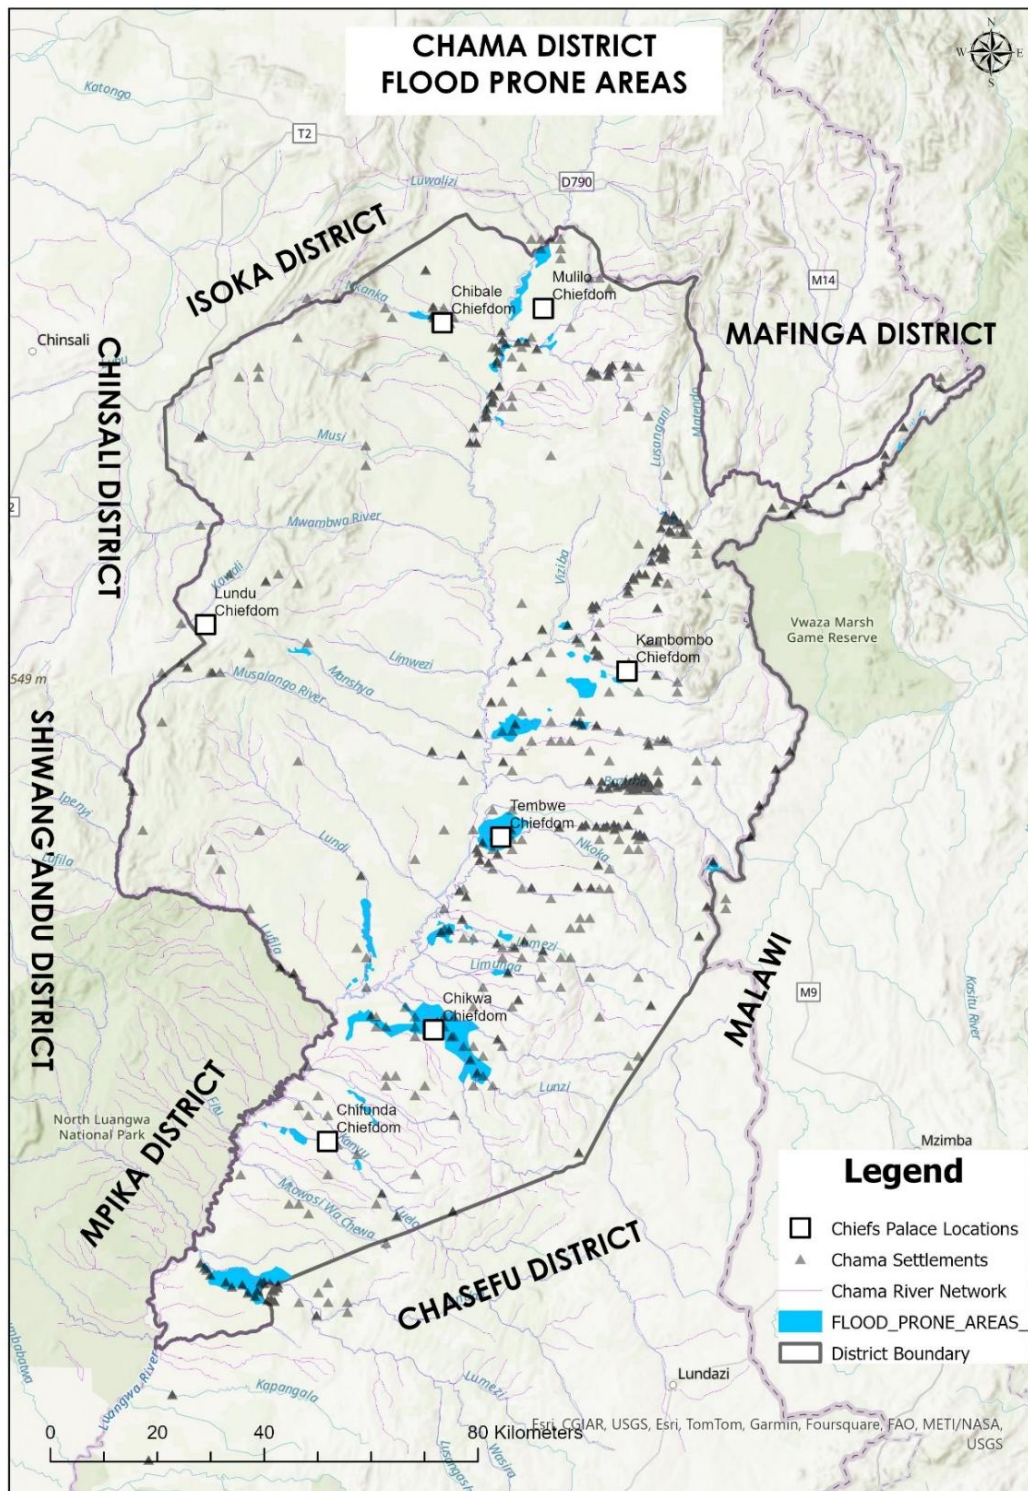

Availability of services

The summary of development control and related efforts in Chama District highlights several key challenges and initiatives. Chama District faces significant difficulties in enforcing development control, particularly in areas of customary land, which constitute over 90% of its territory. This challenge is exacerbated by unregulated local land uses that pose environmental threats. Areas covered at present are those with planned state land in Kamphemba ward while measures to cover the remaining areas in the 24 wards are being developed.

To mitigate these environmental degradation and climatic impact issues, various initiatives have been devised. Environmental initiatives include utilizing the Constituency Development Fund (CDF) to establish tree nurseries and ensuring that contractors replant trees cleared during construction. Additionally, the URP planning regulations of 2020 require that all developments reserve at least 20% of their area for greenery.

In terms of water and sanitation, efforts are being made to map and secure aquifer areas while promoting District Water and Sanitation Health Education (DWASHE). At current, only Kamphemba area has a mapped-out water aquifer. There are also plans for solar power plants in Lundu and Kambombo chiefdoms to enhance renewable energy sources.

Forest management is supported by the presence of the existing national and local forests and 17 Community Forest Management Groups (CFMGs). Reinforcing CFMGs will help reduce flood impacts in most of the flood prone areas depicted in Map 11 below.

Map 11: Flood Prone Areas
Source: Chama Town Council (2024)

For wildlife habitat conservation, Community Resource Boards have been established under the Zambia Wildlife Act of 2015 in five chiefdoms (Kambombo, Lundu, Tembwe, Chikwa, and Chifunda), with plans for expansion and collaborations with organizations such as TRALARD, BCP, and FZS. Finally, the district has implemented climate-smart agriculture practices across 12,000 hectares, with support from various organizations, including TRALARD and COMACO.

Disaster relief aid has been provided to affected areas in Chama North and Chama South through the efforts of the DMMU and the Constituency Development Fund 5% disaster contingency allocation under community projects.

Quality of Services

As a continuation from the assessment of available services, Table 16 gives a summary of the quality of the provided services.

Table 16: Summary for the Quality of Services

CONTROL MEASURE	STANDARD	STATUS
DEVELOPMENT CONTROL	Number of applications for planning permission with environmental protection measures	Although the previously approved applications for planning permission met the overall requirements as prescribed in the regulations, measures for environmental protection are not explicitly stated.
IMPLEMENTATION OF THE WDS STRATEGY 2022-2026	Well-fields characterized, Identified and developed for water supply and irrigation	As it stands, only Kamphemba area has a mapped-out water aquifer. Though plans to map out more areas have been developed and await implementation.

	- Local Aquifers identified and mapped - Aquifer and water protection enforcement mechanisms operationalized - Climate smart water harvesting technologies promoted and applied - Awareness increased on water harvesting technologies	
ESTABLISHMENT OF GREEN AND RENEWABLE ENERGY SOURCES	Renewable and alternative energy infrastructure developed	Construction of Lundu solar power plant is underway.
FOREST MANAGEMENT	- Routine monitoring and inspections field visits - Mapping and GPS marking of identified forests - Survey to ascertain the status of the forest areas - Development of management plans - Construction of Standard Nursery Site - Train communities on other alternative livelihoods (enterprise development) - Natural Forest regeneration areas established	Patrols are carried out within the designated areas though not frequently due to insufficient manpower and housing infrastructure in forest areas across the district.

CONSERVATION OF THE WILDLIFE NATURAL HABITAT	• Research on wildlife (population monitoring and habitat management)	Activity has been planned for.
CLIMATE SMART AGRICULTURE	• Community sensitization on improved seed (Rice, Maize, Groundnuts, Soybeans, Sunflower) • Establish smallholder low-cost community irrigation facilities and Schemes • Training smallholder farmer and staff in irrigation management system • Identify and train local seed growers • Training agriculture staff and farmers in Climate Smart Agricultural technologies. • Conduct awareness campaigns on climate change mitigation and adaptation	Activities are being implemented in Chama.
DISASTER MANAGEMENT AND MITIGATION IN THE DISTRICT	• Conduct disaster response and mitigation activities • Conduct awareness campaigns on climate change mitigation and adaptation • Conduct sensitization campaigns on flood resilience initiatives	Activities are conducted accordingly. The only challenge is the availability of funds for proactive interventions such as flood mitigation infrastructure among others.

--	--	--

Source: Chama Town Council (2024)

Issues from Public Participation Process

The stakeholder engagement in Chama District revealed public concerns that, while not directly linked to environmental protection, impact the effectiveness of existing initiatives. Mitigation measures focus on reducing environmentally harmful practices and promoting alternative livelihoods, facilitated by community groups like CRBs and cooperatives. However, challenges persist, including unequal benefit distribution, uneven workloads, and a preference for immediate returns over long-term programs like carbon trading. Other issues include non-compliance among members, retention of traditional farming methods due to difficulty adopting new practices, and insufficient technical support.

Various environmental programs are implemented district-wide, though not all reach every area. Key initiatives include development control, water resource management, wildlife conservation, and forest management. Programs such as TRALARD and carbon harvesting aim to promote resilience, but some remain in early phases or face logistical challenges. Solar energy projects are yet to be established, while flood response and food security programs are more reactive. Overall, while there is growing recognition of the importance of environmental protection, enhanced support, training, and adoption of alternative energy solutions are needed to boost effectiveness.

Impact of Changes Anticipated Over the Next Ten Years

Arising from the projection of population growth, it is anticipated that should the current development trends persist, there will be a more rapid loss of forest cover especially in areas where livelihood activities heavily depend on forest resources. Areas experiencing the pressure of development are the major growth nodes

(Chibale, Lundu, Kalinkhu, Kambombo, Chikwa, and Chifunda). This is attributed to the sparse location trend of settlements that are distant from one to another in areas like Lundu, Chikwa and Chifunda hence the need for reinforcement of stakeholder engagements and implementation of environmentally sustainable economic alternative livelihood activities. Areas like Kalinkhu, Kambombo, and Chibale on the other hand, have a nucleated settlement pattern and as a result, this places a demand for environmental protection due to increase in population and economic activity.

Impact of Environment and Climate Change

As observed from past events, the Chama district has been at the receiving end of natural disasters induced by climate change; The 2019, 2021, 2022, and 2024 floods in both North and South Constituencies are examples of how climate change has affected the district. While climate change may be a global phenomenon, a closer investigation shows that the Chama district had a role to play in the magnitude of the impacts. Agricultural activity in areas such as riverbanks weakened the river borders. This coupled with the clearing of land increased the extent of the damage caused by the floods.

Additionally, the increase in population also places a demand for wood fuel which directly links to the depletion of natural forest resources. With the anticipated growth in the next ten years, the district will face more dire consequences should such trends be left unchecked. Consequences may include;

- ✓ Migration of wildlife from past animal corridors
- ✓ Further devastation of public infrastructure
- ✓ Collapse of fragile local area marketing networks

Issues Arising Relating to Gender Groups and Vulnerable Groups

Climate change exacerbates environmental degradation and social vulnerabilities in Chama District, disproportionately affecting women, girls, youths, differently-abled individuals, and those living with HIV/AIDS. Women and girls face displacement, domestic burdens, gender-based violence, and limited decision-making power, while men and boys encounter health hazards and human-wildlife conflicts. Youths are vulnerable to environmental and economic challenges, leading to poverty and job scarcity. Despite these challenges, Chama District is actively working towards gender balance, climate resilience, and inclusive development, promoting equal opportunities, social equity, and economic participation for all, including differently-abled individuals and those living with HIV/AIDS.

External Factors Contributing to the Issue

Global climate change has far-reaching implications, and consequently, economic activities beyond Chama District's borders that generate substantial greenhouse gas emissions constitute an external factor influencing the district's environmental sustainability.

MINING SECTOR

The Chama Integrated Development Plan (IDP) recognizes the strategic importance of the mining sector in driving economic growth, stimulating development, and improving livelihoods in the rural district. Currently, informal mining activities dominate the sector, presenting both opportunities and challenges. Simultaneously, the district is receiving exploration applications from potential investors, signaling growing interest in the area's mineral resources. The

following chapter looks into the mining sector at district level analyzing the district's performance and issues faced by the residents and stakeholders.

Key Government Priorities to Be Implemented at a Local Level

Government recognizes the importance of mining in economic transformation and job creation, with industrial value chains taking center stage through value addition and mineral beneficiation to frontload the industrialization agenda. Mining is seen as the key driver in this agenda. Government will create an enabling environment to support enhanced exploration and exploitation of minerals and petroleum including improved management of mining operations to promote stability in mining taxation which will support economic transformation. Another intervention will be to promote Small-scale miners and investors Partnerships, and further, formalization and capacitating of Artisanal mining operations will also support employment creation and income generation.

The government's priority at district level is to legalize, regulate and promote the growth of all mining activities in the district in line with the following legislature;

- ✓ Mines and Minerals Development Act No.11 of 2015
- ✓ The Mining and Minerals Environmental Fund (EFP) Regulations of 1998 (SI 102)
- ✓ The Land Acquisition Act of 1995
- ✓ Urban and Regional Planning Act No.3 Of 2015
- ✓ Local Government Act No.2 of 2019
- ✓ The Public Health Act of 1996
- ✓ Occupational Health and Safety Act .2010
- ✓ Employment Code Act 3 of 2019
- ✓ National Council of Zambia Act.10 of 2010
- ✓ Forestry Act, 2015

Description of the Existing State of Development and key performance indicator

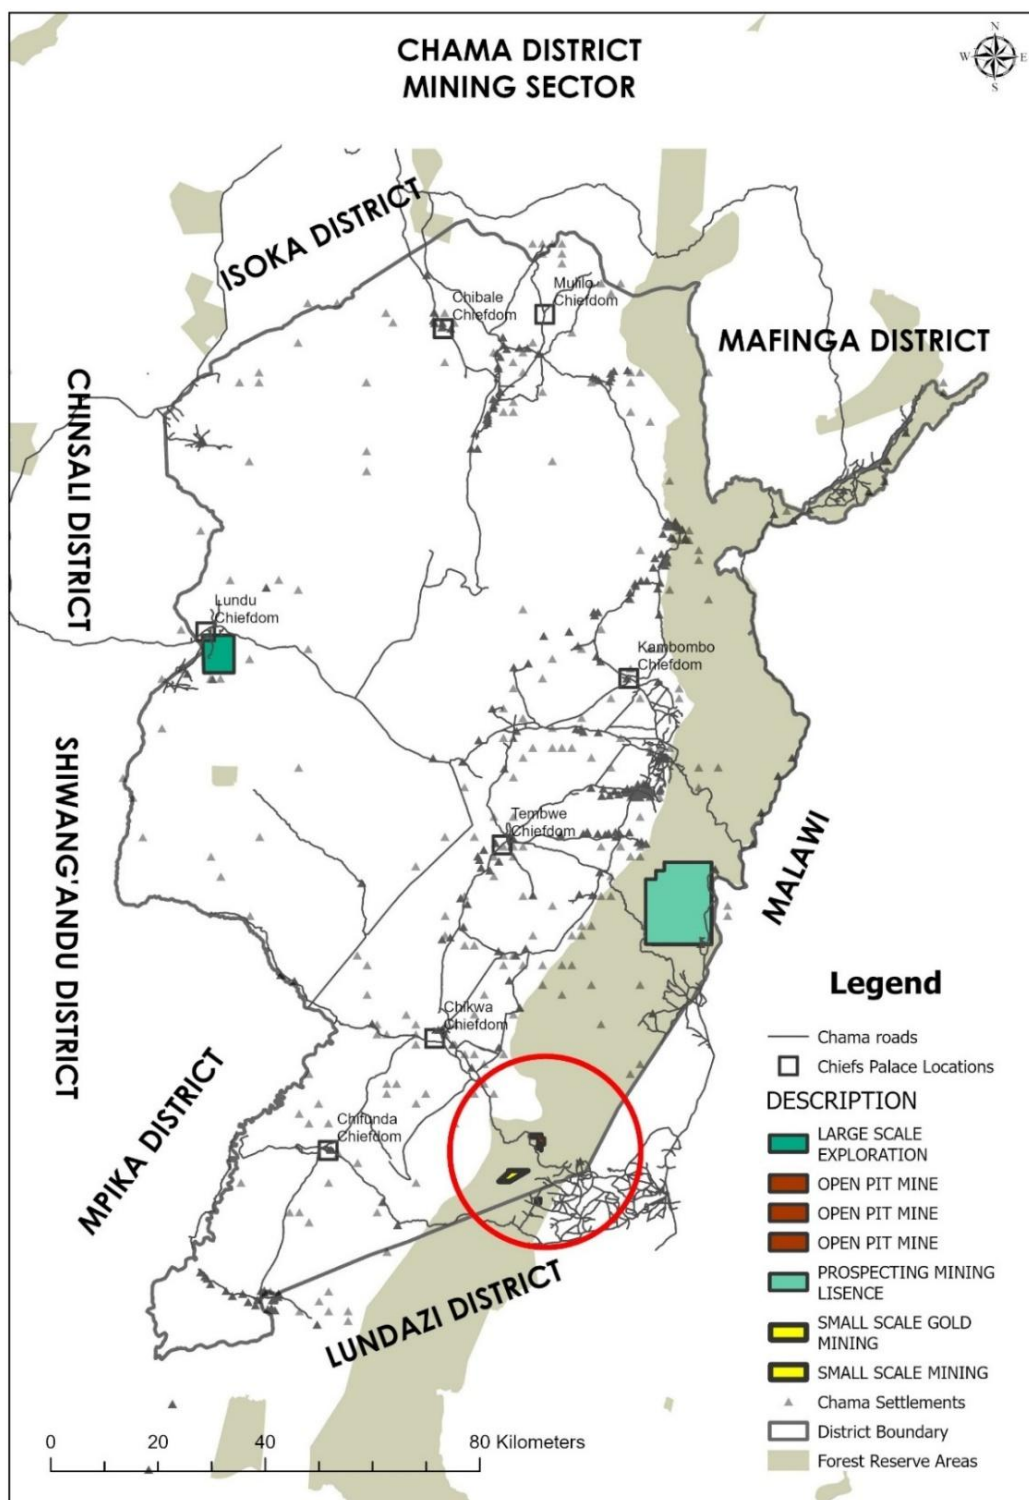

Currently, there is no working commercial mining in Chama district. Therefore, in places that are mineral-endowed, mining activity is restricted to artisanal levels. Most of the prospecting mining activities are located in 3 chiefdoms namely Chifunda, Chikwa and Kambombo chiefdoms. There are a few identified areas within the district where investors have shown interest to explore abundance of minerals such as Tembwe and Mulilo chiefdoms. Other areas where mining activities are taking place include, Sitwe in Ndunda Ward, Mantempa Ward, Mphalausenga, Kalovya in Chilubaluba Ward, Buli in Lupamazi Ward, Chasato in Vilimukuli Ward and Chilenje Ward as shown in figure 17.

There is potential for mines to be established in Chama, which might help reduce poverty and provide jobs. Although there is currently no recognized mine in the district, mining operations are carried out informally. The district has received proposals from a number of investors who want to explore and engage in the mining of valuable stones, including gold, manganese, feldspar, iron, gypsum, and gemstones. Table 17 and Map 12 highlight the potential for mining in the district through the number of applications received for mining exploration.

Table 17: Applications for Mining Licenses in the District

S/N	LISENCE APPLICATION	APPLICATIONS RECEIVED	LOCATION (WARD)
1.	SMALL SCALE GOLD MINING	1	VILIMUKULU
2.	OPEN PIT MINING	3	VILIMUKULU
3.	PROSPECTING	1	CHIBUNGWE AND CHILUBALUBA
4.	SMALL SCALE MINING	1	VILIMUKULU
5.	LARGE SCALE EXPLORATION	1	MUCHINGA

Source: Chama Town Council (2024)

Map 12: Mining Potential Areas in Chama
Source: Chama Town Council (2024)

Assessment of the Quality of Services Relevant to this Sector

The quality of service of the existing mines and exploration mines are below standards due to limited financial investment and lack of technology in the sector. The illegal miners work without safety and in the current state of the sector, it is difficult to determine the number of miners accessing health services. In addition, it cannot be determined if the current mine activities improve the miner's income and livelihood and also enhance community well-being and social cohesion.

Therefore, there is need to provide for or advocate for a means to enhance accessibility of artisanal miners to small-scale licenses as they operate without licenses. This is due to the cost of obtaining licenses to take part in the sector.

There is need for PPPs in the sector, and foster partnerships with Local Authorities, NGOs and communities; push for policy reforms to encourage local communities access artisanal licenses.

Issues arising from the public participation process

Arising from various interactions with the local community, the following issues were identified;

- ✓ No decent jobs have been created from the mining
- ✓ The artisanal licenses are expensive
- ✓ Safety and security of mining areas is not guaranteed
- ✓ Communities have not seen social corporate responsibilities from the mining companies
- ✓ Lack of technology and innovation in the sector
- ✓ Difficulty locating and accessing illegal mining sites

Impact of Changes Anticipated Over the Next Ten Years

The mining sector creates opportunities for employment, an increase to the sustenance to local and also a national treasury. It has been noted that overall, Chama has received proposals to establish mines from individuals and firms obtaining prospecting licenses which is even more likely to increase. Within the next ten years, it can be anticipated that the district may have more than two mining firms operating. Nevertheless, the impacts anticipated also pose detrimental effects to various social groups and the environment.

In light of the above, collaborative efforts among line ministries and stakeholders will be necessary to adequately address any and every adverse impact the venture may bring.

Impact of Environment and Climate Change

The mining sector is highly energy-intensive, contributing significantly to greenhouse gas emissions. Carbon dioxide emissions vary depending on the type of resource mined and the mining processes used. Environmentally, mining leads to hillside erosion, deforestation, pollution, and biodiversity loss. Many exploratory mines are situated in remote, flood-prone areas, making access difficult, especially during extreme weather events. Unpredictable weather, especially flooding, often halts mineral production as site access for investors becomes limited.

Issues Arising Relating to Gender Groups and Vulnerable Groups

Mining in Chama district is predominantly male-dominated due to perceptions that mining requires intensive labour, limiting female participation. Youths, aged 18-35, are the most active demographic in both legal and illegal mining activities. Although most roles are filled by men, one environmental mining project is

managed by a woman, highlighting the need for more gender sensitivity to promote equity. The district has only illegal mines, and women are typically involved in non-mining roles, such as meal preparation.

TOURISM SECTOR

The tourism industry is an economic mainstay of the district. It has the potential to open Chama as the preferred tourism destination in the northern circuit. It is at the Malawi-Zambia Trans frontier Conservation Area (MAZA TFCA) where it connects the Zambian conservation efforts with Malawi to reduce the natural habitat degradation. It generates revenue, creates jobs, promotes wildlife conservation, and improves standard of living of the local people. The section provides a review on key priorities in the existing plans that govern the performance and presents the core issues affecting sector development in the district.

Key Government Priorities to Be Implemented at a Local Level

Government's priority is to diversify the economy through value addition in tourism which has forward and backward linkages. In order to do this, government will promote tourism growth through, development of tourism infrastructure, develop new innovative tourism products, and promote and market tourism products. Other programmes will include conducting 2500 Arts events, 1000 Art promoters registered, and 5000 of artists trained in various skills related to tourism (8NDP, 2022).

Tourism growth is expected to be promoted through increased investments to the sector, particularly in the undeveloped areas such as Chama which have strong potential for tourism, enhancing capacities of artists, improving the heritage sites, attracting Local and Foreign Direct Investment in tourism theme parks, Meetings

Incentives, Conferences and Events (MICE), tourism sites, hotels, lodges and adventure packages under cultural and adrenaline tourism (8NDP, 2022)

Attributed to Chama district's abundant natural tourism resource, this section gives an overview of the tourism sector at district level. In addition, this section highlights the legal framework and policies guiding the development of tourism sector. The general policies are:

- ✓ The Zambia Wildlife Act (2015)
- ✓ Forest Act (2015)
- ✓ Environmental Management Act (2011)
- ✓ Tourism policy
- ✓ National parks and wildlife policy (1998)
- ✓ Forest policy (2014)
- ✓ National culture policy
- ✓ Heritage conservation policy
- ✓ National Biodiversity Strategy Plan

Description of the Existing State of Development and key performance indicator

Despite having certain tourist attractions, such as Nyika Plateau National Park, which is located in Zambia's Chama District in the Eastern region and spans an area of around 80 square kilometers, the district has not seen many tourism-related activities. In 1972, Nyika was designated as a national park. Along the international border, Nyika Plateau National Park has a shared boundary with Malawi Nyika National Park. The highest altitude park in Zambia's national park system is Nyika, which ranges from 1,295 to 2225 meters above sea level. In terms of vegetation, The Nyika Plateau National Park is a strikingly a beautiful park of montane grassland and relict forest patches. The common small animal fauna includes the four striped grass rat, the black and red squirrel, the two-

spotted palm civet and three species of swamp rat. The larger mammals include Maloney's monkey, klipspringer, reedbuck, bushbuck, blue duiker, zebra, roan antelope, eland and leopard. Bird-watching is excellent all year round at Nyika Plateau National Park but best between October and January, when migrant birds are present. The common birds include secretary bird, auger buzzard, green loerie, white-neck raven, black-eyed bulbul, common stone chat, African boubou, fiscal shrike, common waxbill.

The district has a rare and natural wood fossilization and palaeontology site at Sitwe (Figure 8) located 38.9km from Chama CBD and it covers an area of about 100 meters in radius that is believed to have existed for over 150 million years. However, the site is not protected making it vulnerable to human disturbance and the local people do not know the importance of a fossil land or area.

Figure 8: Fossilized Wood as Sitwe Palaeontological Site

Source: Chama District Situation Analysis (2020)

Other tourism attraction sites include hot springs and notable ones being the Mwine Mwambwa Hotspring, Kalimulilo Hotspring, and Kalunguvu Hotspring. These sites are attractive place to wildlife such as baboons, elephants, buffaloes, puku, bush pigs, kudus which frequent the site for water and salt (Figure 9).

Figure 9: Various Hot Springs in the District (Mwambwa -Left, Kalunguvyu – middle, and Kalimulilo - right)

Source: Chama District Situation Analysis (2020)

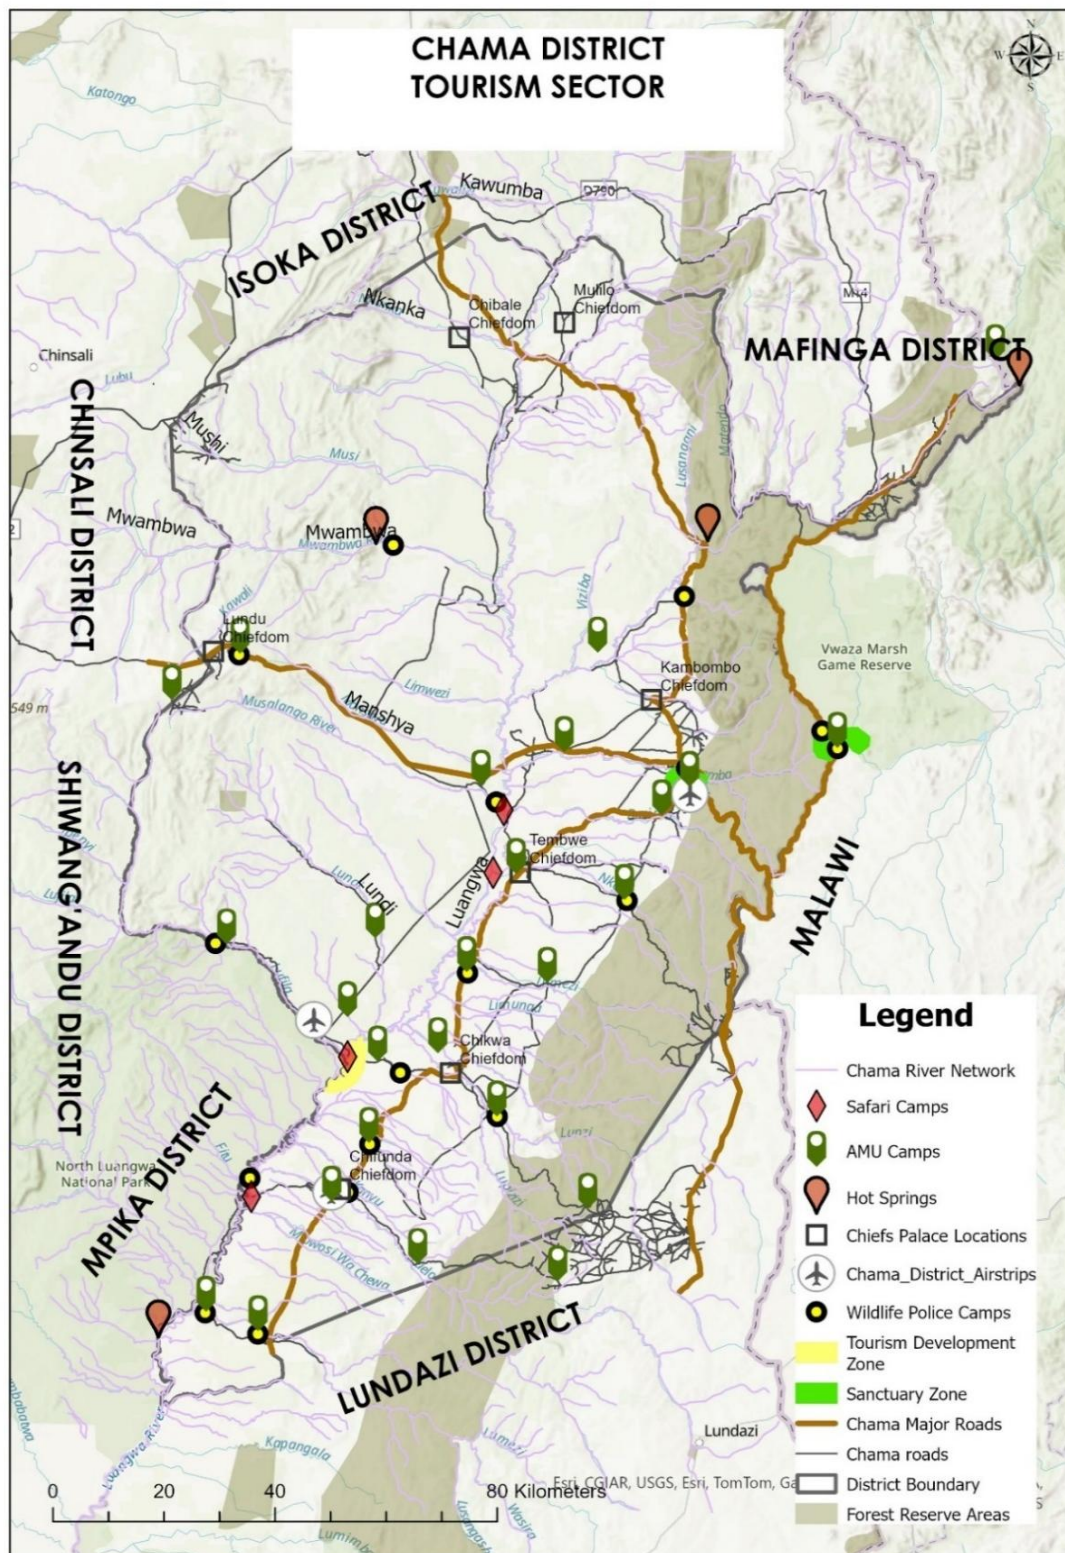

The district hosts a magnificent traditional ceremony known as Kwenje. The main goal of the ceremony is to educate and raise awareness among Zambians about the "Sound of the Kwenje" drums, which proclaim danger, coronation, and funerals. Various dances, including the male-dominated Visangu/Gogo dances and the Chidiwiti dance for both sexes, are performed throughout the event. The ceremony, marked by a wild party atmosphere complete with drums and whistles, is held in the Chieftdom of Kambombo.

The district's hospitality sector comprises 16 lodges and guest houses, although none meet the standards of a full-fledged hotel. While these establishments cater to local and regional visitors, they fall short of accommodating international tourists' expectations. However, during hunting season, the district experiences an influx of tourists, primarily served by a limited number of hunting camps, notably Kanusha and Nutoboze.

The district is home to two significant Iron Stone Age sites, Mutemba Libwe and Njunga, which hold immense tourism potential due to their rich iron smelting materials, including bog iron, Haematite stone, and ancient furnace ruins. These sites offer a unique glimpse into the region's cultural and industrial heritage, but lack essential amenities to fully develop as tourist destinations, presenting an

opportunity for infrastructure development and preservation efforts to unlock their potential.

The district is home to two revered royal burial sites: Kambombo and Mulilo. The Kambombo site, with a rich history spanning over 200 years, serves as the final resting place of Chief Zamangwe. These sacred sites host seasonal rituals, paying homage to the spirits of deceased chiefs and seeking blessings of good health, prosperity, and success for the chiefdom. The rituals foster peace, reverence, and unity among the community, emphasizing the importance of honouring their heritage and leadership. However, there is need to secure these sites and improve them in order for them to become attractive visiting sites. Map 13 shows where tourism attraction sites are located.

Map 13: Tourism Attraction Sites

1	Chifunda	6	0	0
2	Chikwa	9	0	1
3	Tembwe	4	3	1
4	Kambombo	4	2	
5	Lundu	3	0	1
6	Chibale	0	5	0
7	Mulilo	0	5	0
	TOTAL	26	15	3

Source: Chama Town Council (2024)

In relation to the assessment above, communities greatly benefit from existing safari camps through safari hunting, but more can be done by leasing out other areas in Chibale and Mulilo Chiefdoms to safari outfitters so that benefits can be spread out to other communities (Table 18 and Table 19). In areas with community resource boards (CRB), the CRB staffs are very few to support the existing DNPW staffs in conservation duties. Additionally, as human population keeps increasing in the district the current number of existing wildlife camps is not enough to service the increasing communities against HWC and ensuring safety of community members.

Issues from Public Participation Process

One of the major issues that rose from community and stakeholder consultation process was on human wildlife conflict, community members complained on the damages that animals cause on their livestock, crops and human lives. They demand for DNPW to start compensating them once they are affected. Other major issues include the following:

- ✓ Encroachment on animal corridors and forest reserves
- ✓ Illegal offtake of natural resources
- ✓ Habitat degradation and fragmentation due to human activities such as unregulated settlements, unsustainable farming practices and deforestation
- ✓ Delay to respond to Human Wildlife Conflicts
- ✓ Less patrols conducted
- ✓ Unexploited potential and limited supporting infrastructure

Impact of Changes Anticipated Over the Next Ten Years

In a period of 10 years, the population of the district is expected to rise and this is likely to trigger an increase in demand for services and facilities in the tourism sector. With more investments in the sector, more tourism facilities such as lodges, hotels, and bush camps will be established, hence the demand for hospitality services will be high. An increase in population is likely to bring about more illicit activities on natural resources. For effective patrolling and ensuring the safety of communities, more wildlife officers and village scouts will be required. The continued change of land for tourism in an unsustainable way may continue to affect the environment negatively.

Impact of Environment and Climate Change

Clearing of areas for development of tourism facilities such as lodges and hotels, this will see the disturbance of a large area by cutting down vegetation and disturbing the natural habitat of animals for the purpose of construction. Even the noise that comes with the construction will tend to scare off animal species to different areas.

Climate change has negatively affected the sector this has led to the increased reports of HWC as wildlife is moving from their habitats to human settlements in search of food and water. Some areas are experiencing dry spells that have negatively affected the production of food for the communities and this has negatively affected their livelihood. Flash floods in the landscape because of climate change tend to negatively affect the operations of Department of National Parks Wildlife (DNPW); most of the areas become an accessible.

Issues Arising Relating to Gender Groups and Vulnerable Groups

This sector offers particular benefits for women, who can access jobs in the hospitality industry and develop entrepreneurial skills through crafting and selling local artifacts, enhancing their economic independence and social status. By tapping into tourism, the district can stimulate local economic growth, reduce poverty and unemployment, preserve cultural heritage and traditions, and foster community development and empowerment, ultimately improving the quality of life for its citizens.

TRANSPORTATION AND COMMUNICATION SECTOR

The sector is comprised of transport and communication infrastructures which include telecommunication, roads and storm-water drainage. A well-established

transport system enables efficiency in transporting goods and services and overall cost of conducting business.

Key Government Priorities to Be Implemented At a Local Level

The sector is currently using the National Transport Policy of 2019. The policy endeavors to promote development of road transport services, facilities and infrastructure that meet the global safety standards through construction, maintenance, upgrading, and rehabilitation, thereby promoting sustainable mobility of both goods and passengers to achieve economic and social needs, and develop systems to facilitate Non-Motorized Transport.

The Eighth National Development Plan prioritizes at improving the road network infrastructure and improve Information Communication and Technology (ICT) infrastructure for quality service delivery. These strategies are to be implemented at local level through the construction of and maintenance township and feeder roads, installation and construction of culverts and bridges, installation of mast towers, and improvement of the local community radio station for efficient transportation and communications, construction and maintenance of a bus station, establishment of a new taxi rank, construction of a filling stations and develop systems to facilitate non-motorized transport in the district.

Status of Implementation of Existing Plans

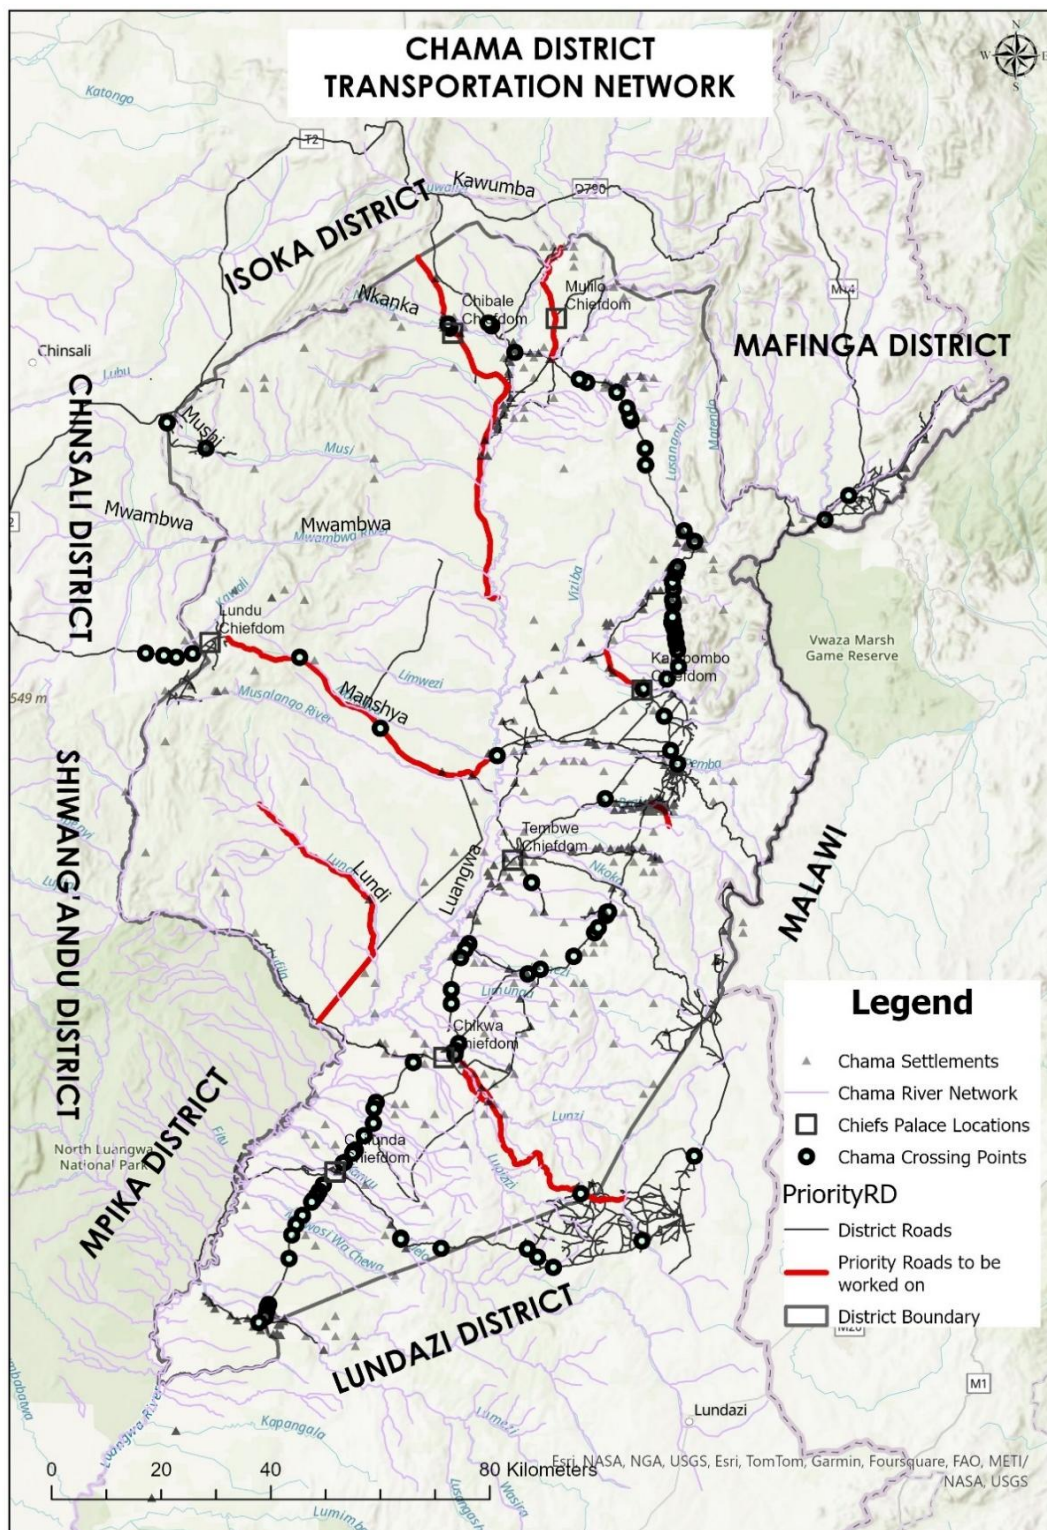

The district has 5 major roads leading into and out of the district namely; Chama-Matumbo Road, Chama-Lundazi Road, Tembwe Road, Muyombe Road, and Chama-Chibale Road. The municipality has a large and well-maintained street network with a drainage system. These township Roads have street lights installed, making the streets safe and secure and improve on the business hours. Chama Town Council plays a major role in the maintenance of the township roads.

Additionally, the district lacks a modern bus station which can house all the public transport.

The district's rural areas are connected via a network of poor, often impassable, gravel and earth roads. The majority of roads require maintenance, including the construction of crossing points and bridges, which are often nonexistent. Under road development and maintenance, the Local Authority in collaboration with Road Development Agency conduct routine works for vegetation control along the Chama-Matumbo Road and Chama-Lundazi Road. The local authority has deliberately procured earth moving equipment using CDF to enhance the maintenance and development of access and feeder roads.

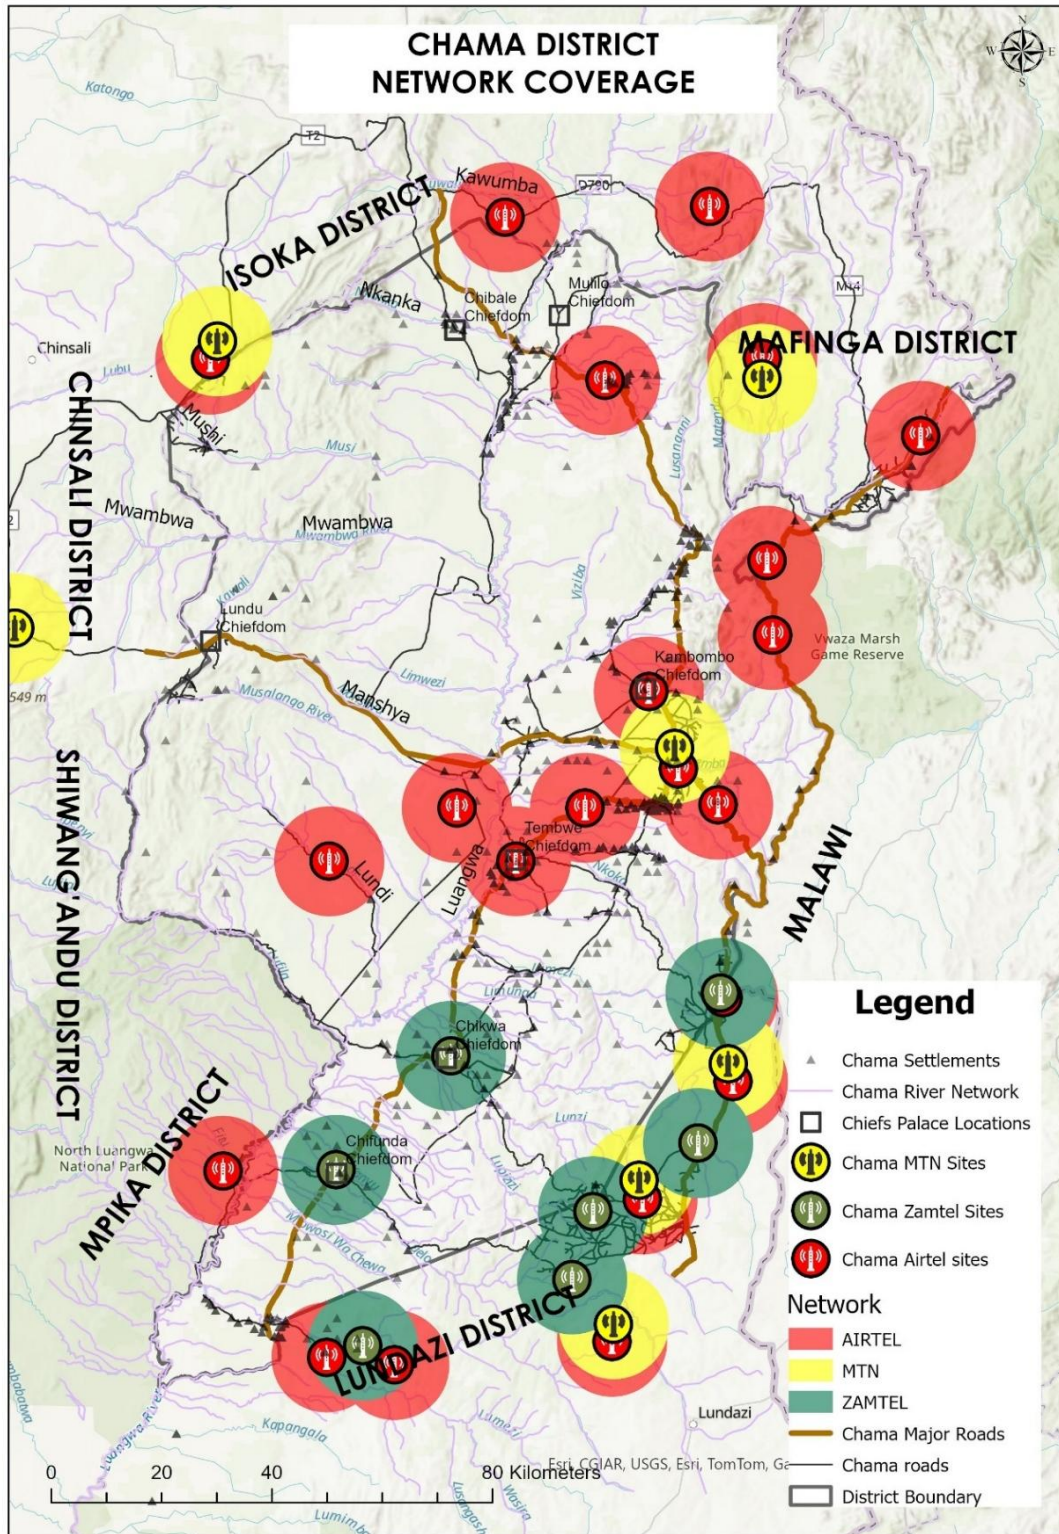

In terms of air transport, the district has three small airfields which can only accommodate small aircrafts, however, only two (2) are functional and they lack essential infrastructure. The Luangwa River passes through the district and it is used as another mode of transport to connect Chipala and Lunzi Wards.

Map 14 below displays the road network in the district.

Map 14: Chama district transport infrastructure
Source: Chama Town Council (2024)

The district has 22 communication mast towers for mobile communication and radio network (Map 15). The district is served by three service providers namely, ZAMTEL (Zambia Telecommunications Network), MTN (Mobile Telecommunications Network), and AIRTEL which provide both data and voice telecommunication. The network coverage of the district provided with proper internet services and mobile network has been focused within the CBD. The quality of network outside the CBD is commonly poor to absent hence no proper internet services are provided in various areas of the IDP. There is need to amplify network coverage by all service providers. Previously, the IDP area had limited Kwenje radio coverage compared to now, that the radio station was procured network coverage boosters under CDF that has strongly increased their network coverage.

Issues from Public Participation Process

Among the issues identified during the consultative meetings include the following;

- ✓ Most of the areas above 20-30km from the CBD do not have access to all the 3 networks and they do not have access to internet
- ✓ Limited access to social services as some roads are impassable
- ✓ Poor state of feeder roads leading into and out of the district centre
- ✓ Absence of organized bus station and taxi ranks
- ✓ No TV and radio signal in some parts
- ✓ uncompleted construction of Chama – Matumbo and Chama – Lundazi Road

Impact of Changes Anticipated Over the Next Ten Years

Current efforts to provide road infrastructure have been limited to only to the urban ward (Kamphemba) which have had some of its roads upgraded to bituminous standards with the rest of the district experiencing minimal to no infrastructure at all. It is anticipated that they will be an increase of traffic in the urban centre and therefore, they will be need to plan for this traffic increase. Due to population growth for both rural and urban areas, demand for food and general services will go up and consequently an increase in the movement of these goods that would lead to deteriorating of roads, hence, the need to plan for future road works and maintenance. Further, road constructions will bring about changes in land use, it is anticipated that most of the land along constructed roads will be used for commercial purposes and new settlement patterns will appear. The increase in commercial activities will improve revenue for the Local Authority and enable them deliver quality service to the people of Chama. In addition, this will improve the general economy of the district.

With the population projection increased there will be demand for more communication towers in the district to avoid network overloading. To boost its tourism industry, the area will have to construct an airport that would draw both domestic and foreign travelers. The tourist potential of Chama in North Luangwa National Park is considerable.

The communities where growth will occur include; Chama CBD, Tembwe Centre, Kambombo Centre, Chifunda Centre, Mulilo Centre, Lundu Centre and Chikwa Centre as well as areas along the two main roads and around water points. These areas will require more services such as access roads and mobile communication network. With the construction of the Chama-Mutombo and Chama-Lundazi roads, which will boost trade and material movement, a well-designed, contemporary bus station will be required to coordinate public transportation systems.

Impact of Environment and Climate Change

Road transportation may have an adverse effect on climate change and the environment. Fossil fuels, the primary energy source for Chama's automobiles, trucks, and buses, contribute to the release of greenhouse gases, a primary cause of climate change. Degradation of air quality is another possible adverse environmental effect of vehicle mobility. Additionally, the district's roadways, which are primarily made of gravel, are in poor condition and emit a lot of dust, which pollutes the air.

On the other hand, road infrastructure is impacted by climate change. Soil erosion and floods in the galleries are caused in part by the absence of drainage systems. These pose a risk to human health and the environment. In order to make the road network climate change robust, climate change interventions like culverts and drainage systems are required.

Issues Arising Relating to Gender Groups and Vulnerable Groups

Most road infrastructures lack bridges and drainage, which makes them susceptible to deterioration. During the rainy season, gullies and potholes form on the surfaces of the roadways. As a result, vulnerable populations—such as women, people with disabilities, and children—are unable to access institutions like healthcare facilities and schools.

Furthermore, women farmers are similarly impacted as the inadequate road system limits their ability to move about and produce. The roads in the district are not user friendly to PWD, thus, there is need to ensure that road infrastructure accommodate the needs of People With Disability.

External Factors Contributing to the Issue

Major external factors contributing to the issue include limited resources by the Local Authority to construct, maintain and rehabilitate road network infrastructure. The Local Authority does not have enough funding to construct bituminous stand roads within the district. The maintenance of the main roads is under the jurisdiction of RDA, the LA does not conduct any works in these roads.

Extension of network coverage for all the operating mobile service network providers solemnly lies within their capacity to do so; the LA however has identified and recommended areas that need mobile network services within the IDP area.

ENERGY SECTOR

Key Government Priorities Being and To Be Implemented at a Local Level

Government through the 8NDP sees the industrialization and employment creation will be actualized through adoption of energy efficient solutions and expanded green electrification including extending power and to growth

centers, farm blocks, industrial parks, Multi Facility Economic Zones (MFEZs) and remote rural areas. Government further intends to promote renewable energy and alternative energy in the energy mix.

In order to achieve Zambia's aspiration to be a prosperous middle-income country by 2030, the National Energy Policy (NEP) was launched in 2019 to guide Ministries and Institutions responsible for energy services in the Zambian economy to meet the challenges of achieving access to reliable, sustainable, and affordable energy services. The Policy provides guidance for the continued development of the energy sector essentially on the security, affordability, supply, and utilization of energy. The Energy Policy, 2019 is in line with the political, economic, social, technological, and environmental changes that have occurred in the past decade.

Description of the state of the energy sector

Chama district just like any other district in the country is connected to the main National electricity grid supplied by ZESCO. Other than, getting services from ZESCO, the district has also benefited from the Rural Electrification Authority whose mandate is to provide electricity infrastructure to rural areas of Zambia using appropriate technologies. The electricity supply demand stands at 1.5 megawatts for Chama district.

Chama is experiencing unprecedented development and demand for electricity supply is increasing especially after connection to the national grid. Currently, the number of households and entities that are connected to the national grid (ZESCO) in the district is estimated at approximately 1,527 representing 2.7 percent households connected to power and they are all in Kamphemba Ward. However, there is need for ZESCO to expand its current network system so as to cover other areas such as Tembwe, Chibale, Chikwa, Chifunda, Lundu, Mulilo and

other parts of Kambombo Chiefdoms. The district has no service/filing station. Petroleum has to be sourced from the neighboring district and this has increased the cost of doing business. Table 20 shows the number of households connected to power and how many need to be connected.

The planning area has one 33KV distribution line supplying Chama. Pending developments include:

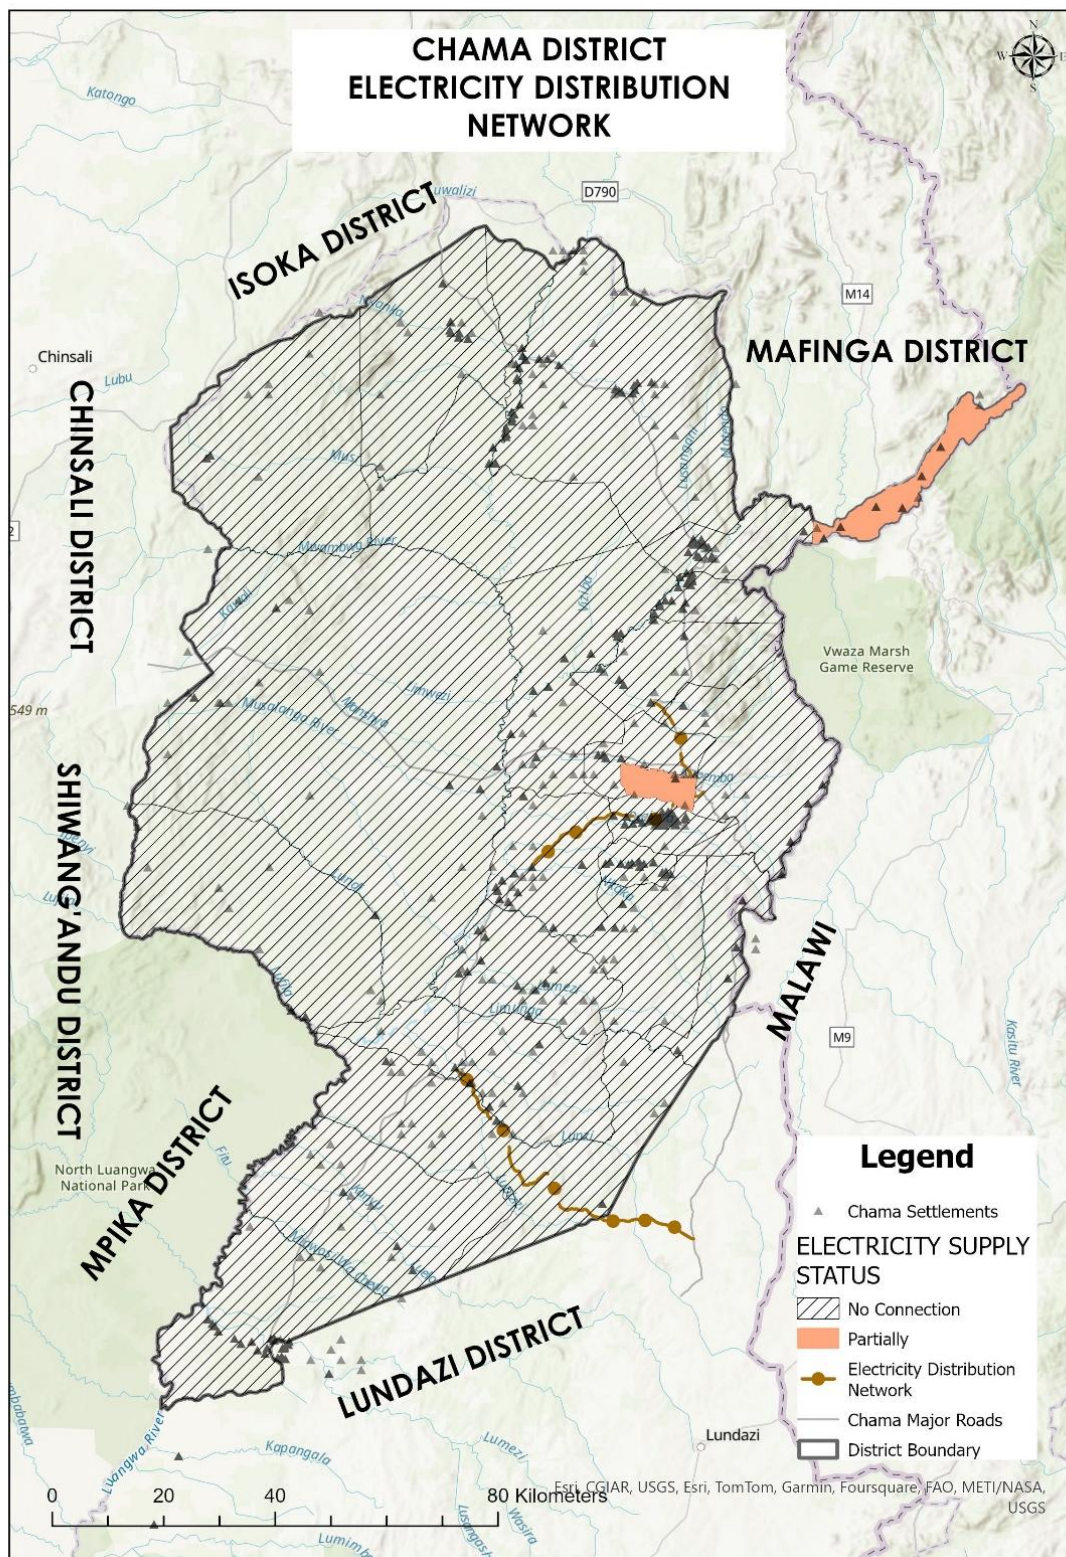

- ✓ Chikwa feeder at 11KV from Lundazi-Lumezi, 120km line to supply the following areas, Chifunda, Chikwa and Tembwe area and Kalovya area.
- ✓ Kambombo feeder at 11KV from Chama CBD, 30km line to supply the following Senior Chief Kambombos' Palace and surrounding areas.

Table 20: Households and Power Connection

SN	Ward	% with electricity	% pending/earmarked for connection	% without electricity
1.	Kamphemba	2.7	3.3	94
2.	Other 23 wards	0	0.1	99.9

Source: ZESCO (2024)

The district does not have any established solar plant providing renewable solar energy. Nevertheless, a private company called VITALITE and Climate Management has established an outlet which sells solar equipment that can only power low voltage electric appliances such as small radios, televisions, and lighting. These technologies are most predominantly used in rural areas. Map 16 illustrates the electricity distribution network in Chama.

Map 16: Electricity distribution network in Chama

Source: Chama Town Council (2024)

Issues from Public Participation Process

The following are the major issues that arose for the public consultation process:

- ✓ Limited power grid connection as most houses and entities are not connected to the main power line.
- ✓ Lack of alternative sources of power and energy leading to deforestation and degradation of the environment due to heavy cut down of trees for charcoal and farming.
- ✓ Absence of a fuel pump station and periodic fuel shortages in the surrounding districts.

Impact of Changes Anticipated Over the Next Ten Years

Charcoal is consumed at a higher rate than electricity. These levels might rise due to the projected growth in population, which would have a detrimental impact on the environment if families don't invest in sustainable alternative energy sources or if connections to the national grid aren't increased. If the issue is not properly controlled, it is predicted that the district's forest cover would drastically decline in the upcoming years. The figure...gives details to areas that will need power connection as the population grows.

The Impact of The Continuation of Existing Trends on Land Use and Population Distribution Patterns

Charcoal consumption in the district is alarming, projected to double by 2030, with 345.8 million m³ of fuel wood and 25.3 million tons used annually. Traditional charcoal production, a significant economic activity and energy source, has increased from 34% to 51% in urban and rural areas. However, this growth comes at a dire environmental cost: deforestation, land degradation, and climate change impacts. As trees are harvested without replanting, the district's land

cover is rapidly deteriorating, highlighting the urgent need for alternative energy investments to mitigate these consequences.

Impact on Environment and Climate Change

Deforestation, land degradation, and habitat loss, leading to biodiversity decline and ecosystem disruption. Burning wood and charcoal releases greenhouse gases, contributing to climate change, air pollution, and health issues. Additionally, it fuels soil erosion, water cycle disruption, and decreased carbon sequestration, exacerbating global warming.

Issues Arising Relating to Gender Groups and Vulnerable Groups

Inadequate electricity infrastructure and reliance on charcoal and firewood disproportionately affect vulnerable groups, particularly women, children, and the elderly. Women, responsible for household energy management, bear the burden of fuel collection, cooking, and health impacts. Indoor air pollution from charcoal and firewood exposes them to respiratory risks, while collection tasks consume time and energy, limiting economic and educational opportunities. Children's health and education suffer due to poor air quality and limited lighting. The elderly, often with compromised health, face increased vulnerability to pollution-related illnesses. Additionally, people with disabilities face accessibility barriers to energy sources, exacerbating their isolation and dependence.

Summary of Core Issues

- ✓ Inadequate Capacity to Access Power Supply
- ✓ 100% of households in rural wards are not connected to national power grid.
- ✓ inadequate alternative energy sources

HEALTH SECTOR

The health sector aims to provide accessible, affordable, and quality healthcare services to families in Chama District, while also promoting a healthy environment. This section reviews existing plans and strategies, and identifies key challenges hindering sector development in the district.

Key Government Priorities to Be Implemented at a Local Level

Prevention of disease is a key aspect in effective public health management. The district places priority on more effective investments in primary healthcare by strengthening fundamental components of the health systems aimed at promoting and maintaining a clean, healthy environment and good nutrition in order to prevent diseases.

Key Priorities of the Development Plan, Policies, Strategies and how they are to be implemented at a Local Level

The key priorities outlined in the 8NDP for the sector include reducing disease burden, maternal and infant mortality and increase life expectancy. This was designed to be implemented in the district through provision of quality and effective healthcare services by promoting hygiene, improved nutrition, health education, increased coverage of occupational health and ensure equity of access to quality, cost-effective and affordable maternal and child health services.

The key strategies outlined in the NHS plan of 2022 focuses on addressing the health sector challenges and accelerating progress towards attainment of the national and global health goals, aimed at ensuring equitable access to quality healthcare to all in Zambia, as close to the family as possible, while leaving No One Behind. The district focuses on the equitable deployment and distribution of

staff, provision of suitable accommodation for staff and construction of new health facilities.

Assessment of the Existing State of Development

Chama has one first level referral hospital and forty-three rural health facilities. These include two Zonal health centers, eighteen health centers and twenty-three health posts as shown in Map 17 below.

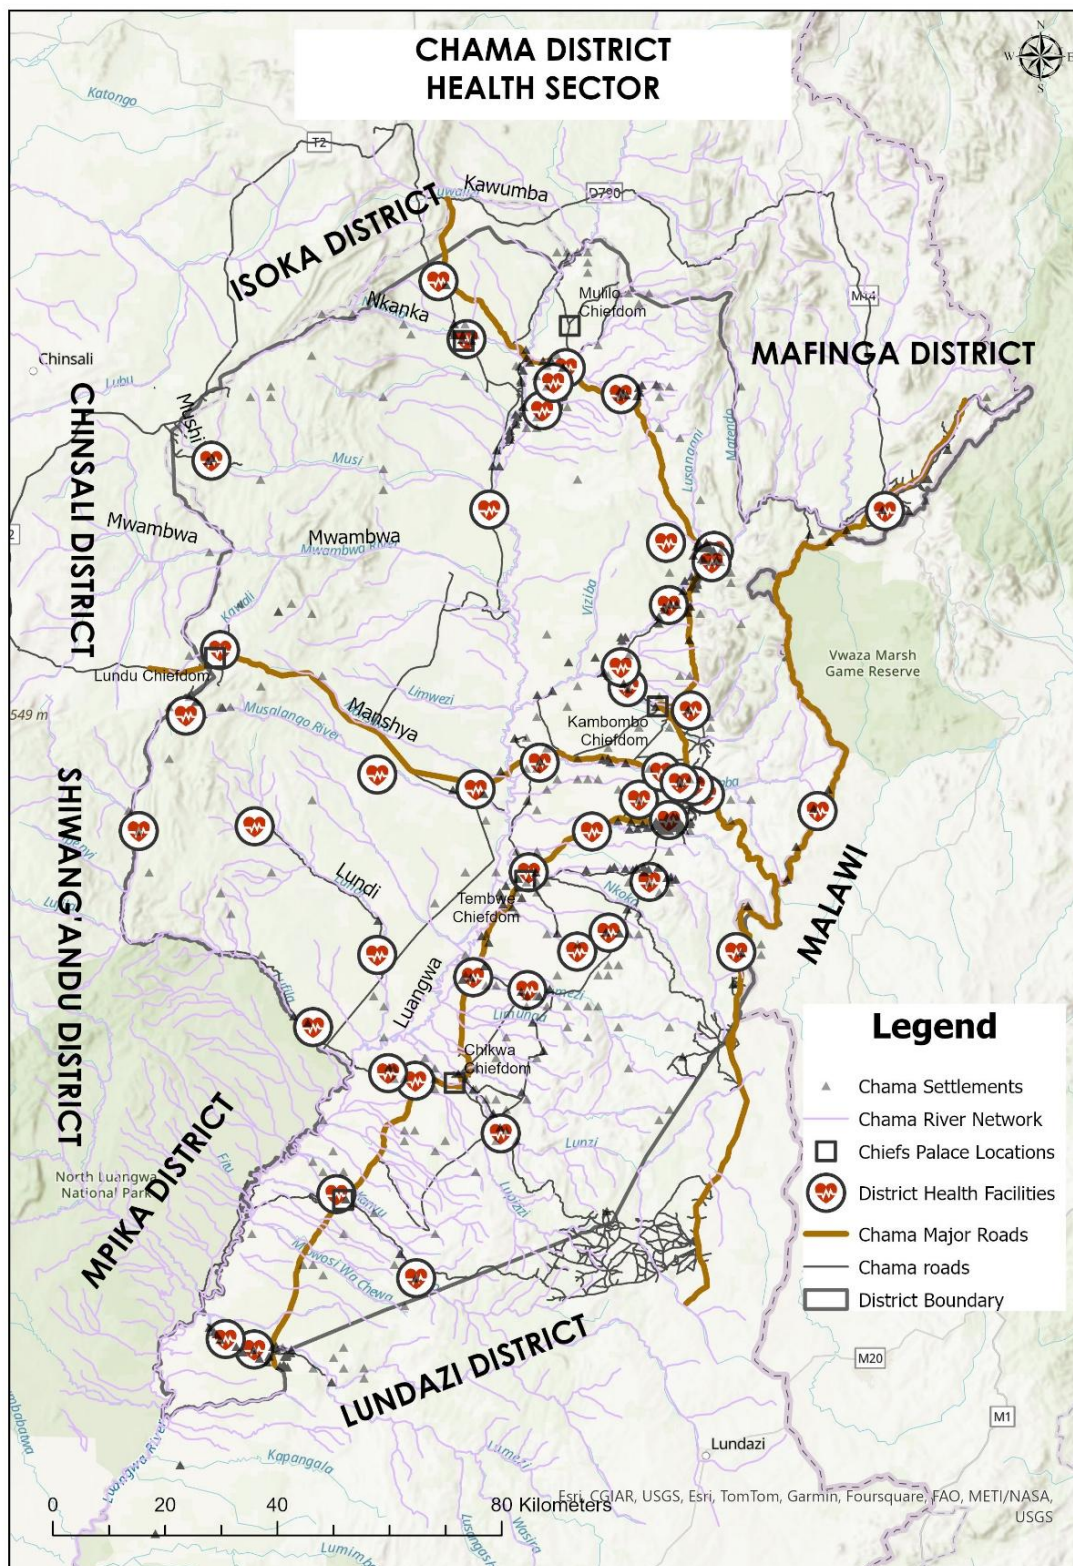

Patients are still faced with a challenge of distances to access medical services from the nearest health facility. The picture is that most of the patients cover a walking distance of more than 15 km especially those in the remote rural areas.

Malaria incidence continues to rise in the district. Some of the interventions include Indoor Residual Spraying (IRS), routine distribution of ITNs, case management and health promotion to eliminate malaria in the district. The target still remains to reduce the incidence of malaria from 571/1,000 to 271/1,000 by the year 2026. Diarrhea incidence in under five increased from 165.5/1000 in 2020 to 187/1000 in 2023 (Chama District Health Office, 2023). Coverage on Cesarean section reduced from 8% in 2022 to 7% in 2023 (Chama District Health Office, 2023). 3rd ANC coverage reduced to 19.7% from 21.3% in 2021 (Chama District Health Office, 2021).

The sector has a total of 77 houses against a target of 129 houses of which many of these houses are in a poor condition. Hence the need for adequate accommodation in all the health facilities to offset this housing deficit.

Only two facilities connected to piped water are on national electricity grid. The rest of the facilities are dependent on solar power which needs urgent maintenance.

Transport still remains a challenge in the district with high maintenance costs due to bad terrain. Only 28 health facilities have running motorbikes. There is need to urgently address transport challenges for easy referral and service delivery.

Source: Chama Town Council (2024)

Availability and quality of Services Relevant to this Sector

Availability of Facilities

Currently the district has 44 health facilities of which 1 is a level one hospital, 22 health centres and 21 health posts. Given the standards provided by Ministry of Health of having a health facility after every 5km. There is need to construct more health facilities to reduce the distance being covered by the communities to access health care service.

Quality of Services

Table 21 shows that the district is currently in short of health personnel as the district stand at 56% (403/708) health personnel as per establishment. As a result, some health services are compromised due to lack of health personnel.

Table 21: Establishment Register of Chama District Health Office

Category of Staff	Establishment			Existing		
	DHO	Hosp.	H/Cs	DHO	Hosp.	H/Cs
Medical Doctors	1	11	0	1	2	0

Total	29	223	456	25	162	212

Source: District Health Office (2024)

Issues from Public Participation Process

Chama District faces challenges in accessing healthcare services due to long distances to health facilities, with some communities located 10-30km away. To address this, there is a need to construct more health facilities, particularly in disadvantaged communities. Additionally, staff houses, water, and sanitation facilities are required to meet minimum staffing standards for quality healthcare. Identifying areas for new health facilities can help increase access to healthcare services within a 5km radius. Table 22 highlights identified communities that need health facilities. Stakeholders expressed concern on the need to ensure that all the health facilities were well-stocked in terms of drugs. Additionally, a number of roads leading to most health facilities are in a poor state, a situation that has led to delayed referral to first level facilities. The general public expressed concern on the incomplete children's ward at the district hospital. Implying that they will be need to modernise the district hospital and construct three min hospitals in Chikwa, Lundu and Chibale.

Table 22: Locations in Need of Health Facilities

Facility Name	Facility Type/ Level	Location	Constituency	Ward	Health Facilities Needed

Impact of Changes Anticipated Over the Next Ten Years

The anticipated population increase will lead to:

- ✓ Increase in demand for additional health services and facilities
- ✓ Increased demand for more Human Resource and capacity development
- ✓ Increased demand for healthier infrastructure
- ✓ Increased demand for medical requisites and supplies
- ✓ Cost of health infrastructure

Therefore, to meet the demand of health services in future, Table 23 give details of the interventions that are needed.

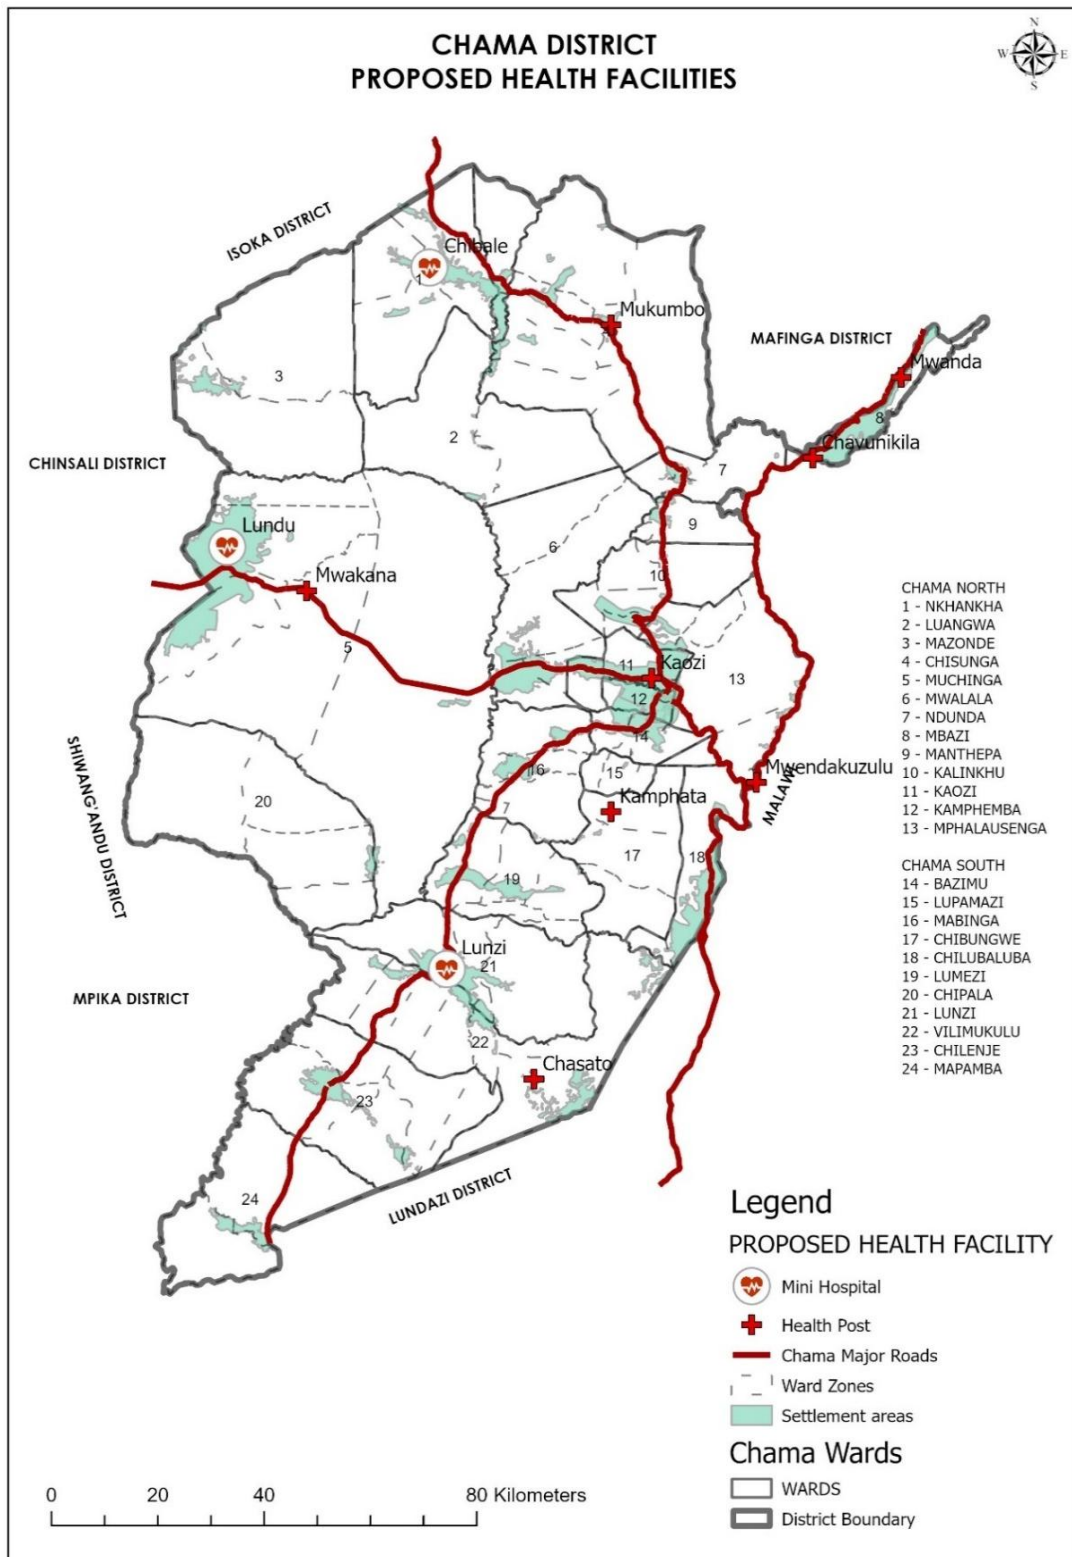

Table 23: Proposed Programme Interventions

S/N	Proposed intervention	Activity
1	Health Infrastructure equipment and transport development	Construction of maternity annex in 38 health facilities.
		Completion of Children's ward at the District Hospital.
		Construction of 55 staff houses in 40 facilities.
		Construction of incinerators and placenta pits in 23 facilities.
		Connecting of 41 Health Facilities to piped water.

		Proposed construction of seven (7) Health posts and Two (3) mini hospitals in the following proposed sites. 1. Nkhaka ward (Chibale)- Mini Hospital 2. Lunzi ward (Chikwa) - Mini Hospital 3. Muchinga ward (Lundu)- Min Hospital 4. Mbazi Ward (Chavunikila, Mwanda) - Health posts. 5. Vilimukulu ward (Chasato) - Health post 6. Kaozi ward (Kaozi farm scheme) Health Post 7. Muchinga ward (Mwakana) - Health Post 8. Chisunga ward (Mukumbo) - Health Post 9. Mphalausenga ward (Mwendakuzulu) - Health Post 10. Chibungwe Ward (Kamphata) - Health Post
		Procurement of Ambulances and servicing the existing ones Procurement of Motorbikes for 44 health facilities
		Connect 34 health facility with off grid power supply

Source: Chama Town Council (2024)

Map 18, illustrates the areas of need for health services.

Map 18: Chama district proposed health facilities.

Source: Chama Town Council (2024)

Impact of Ongoing and Committed Development Programmes on Land Use and Population Distribution Patterns

The current constructions which are ongoing in the district such as the Tembwe mini hospital will reduce the work overload for district hospital as some minor cases from Chama south will be attended to at the min hospital. And the distance which people travel to access health services will be reduced. This will further spur settlement development around the new mini hospital.

Impact of Environment and Climate Change

Climate change -related weather events strain healthcare staff, disrupt physical infrastructures; interrupt supply chains making it difficult to treat patients and threatening healthcare quality and safety.

The establishment of health facilities in Chama District is a commendable initiative; however, the incinerators installed at these facilities pose a significant environmental concern. The emission of greenhouse gases from these incinerators contributes to climate change, which is anticipated to exacerbate the morbidity and mortality rates associated with climate-sensitive diseases.

Malaria, being the most prevalent disease in Chama District, necessitates continuous monitoring due to the district's propensity for flash floods. The perennial flooding creates stagnant water pools, providing ideal breeding environments for mosquitoes that transmit malaria. Consequently, it is essential to prioritize measures that mitigate the environmental impact of health facilities while ensuring the district's preparedness to address the challenges posed by climate change.

Issues Arising Relating to Gender Groups and Vulnerable Groups

Chama District's healthcare system faces numerous challenges, including inadequate infrastructure and services, which disproportionately affect vulnerable populations such as women, girls, and differently abled persons. Pregnant women, in particular, face significant obstacles in accessing antenatal services, often having to travel long distances. Furthermore, there is a pressing need to raise awareness about critical health issues, including cervical and prostate cancer. The district also grapples with high rates of HIV/AIDS, underscoring the importance of targeted interventions such as voluntary medical male circumcision (VMMC) to prevent new infections. Additionally, the establishment of a One Stop Gender-Based Violence (GBV) Centre is crucial, as it will provide a safe and supportive environment for survivors of GBV, while also serving as a hub for awareness-raising and prevention efforts to address this pervasive issue.

External Factors Contributing to The Issue

- ✓ Recruiting of health workers
- ✓ Construction of hospitals lies with the central government
- ✓ Procurement of required quantities of medical supplies

Summary of Core Issues

- ✓ Inadequate health facilities
- ✓ Inadequate health staff
- ✓ Low supplies of essential medicine
- ✓ Inadequate supplies of facility equipment's
- ✓ Inaccessible health facilities

EDUCATION SECTOR

The district's education sector aims to provide quality and inclusive education, aligned with the ministry's mandate, to meet the demands of a rapidly changing economy and technological landscape. The sector will review existing plans and strategies, identify key challenges, and address core issues affecting its development.

Key Government Priorities to Be Implemented at A Local Level

The Eighth National Development Plan (8NDP) prioritizes the education sector, focusing on strategies to enhance educational infrastructure, boost labor productivity, integrate ICT equipment, and foster private sector participation in education service delivery ¹. To actualize these priorities, the district plans to construct adequate infrastructure, leveraging support from the Constituency Development Fund (CDF) and cooperating partners.

The National Education Policy (1996) is anchored on the Vision 2030. The policy aims to promote innovative and productive life-long education and training for all by 2030 and also become a regional centre of excellence in education. With a view of attaining this policy, the district has been promoting programmes such as infrastructure development for ECE, Primary and Secondary and lobbying deployment of more teachers for all levels.

The Re-entry policy mandates schools to allow girls back into the school system who previously left due to pregnancy.

Assessment of the Existing State of Development

The government takes the lead in providing education in the district, with the provincial and district education offices offering services at primary, secondary,

and tertiary levels. Other key players in the district's education sector include faith-based organizations and private institutions.

Availability and Quality of Services Relevant to this Sector

Available Education Facilities and Services in the District

The sector has a total number of 161 education facilities as shown in Map 19, out of which: 80 are primary schools, 69 are community schools and twelve (12) secondary schools out of which 3 are boarding and 9 are day secondary schools. In addition, the district has 76 ECE centres (annexed) and a special education unit (annexed) for learners with special education needs (LSEN). There is also one tertiary education facility for youth skills training.

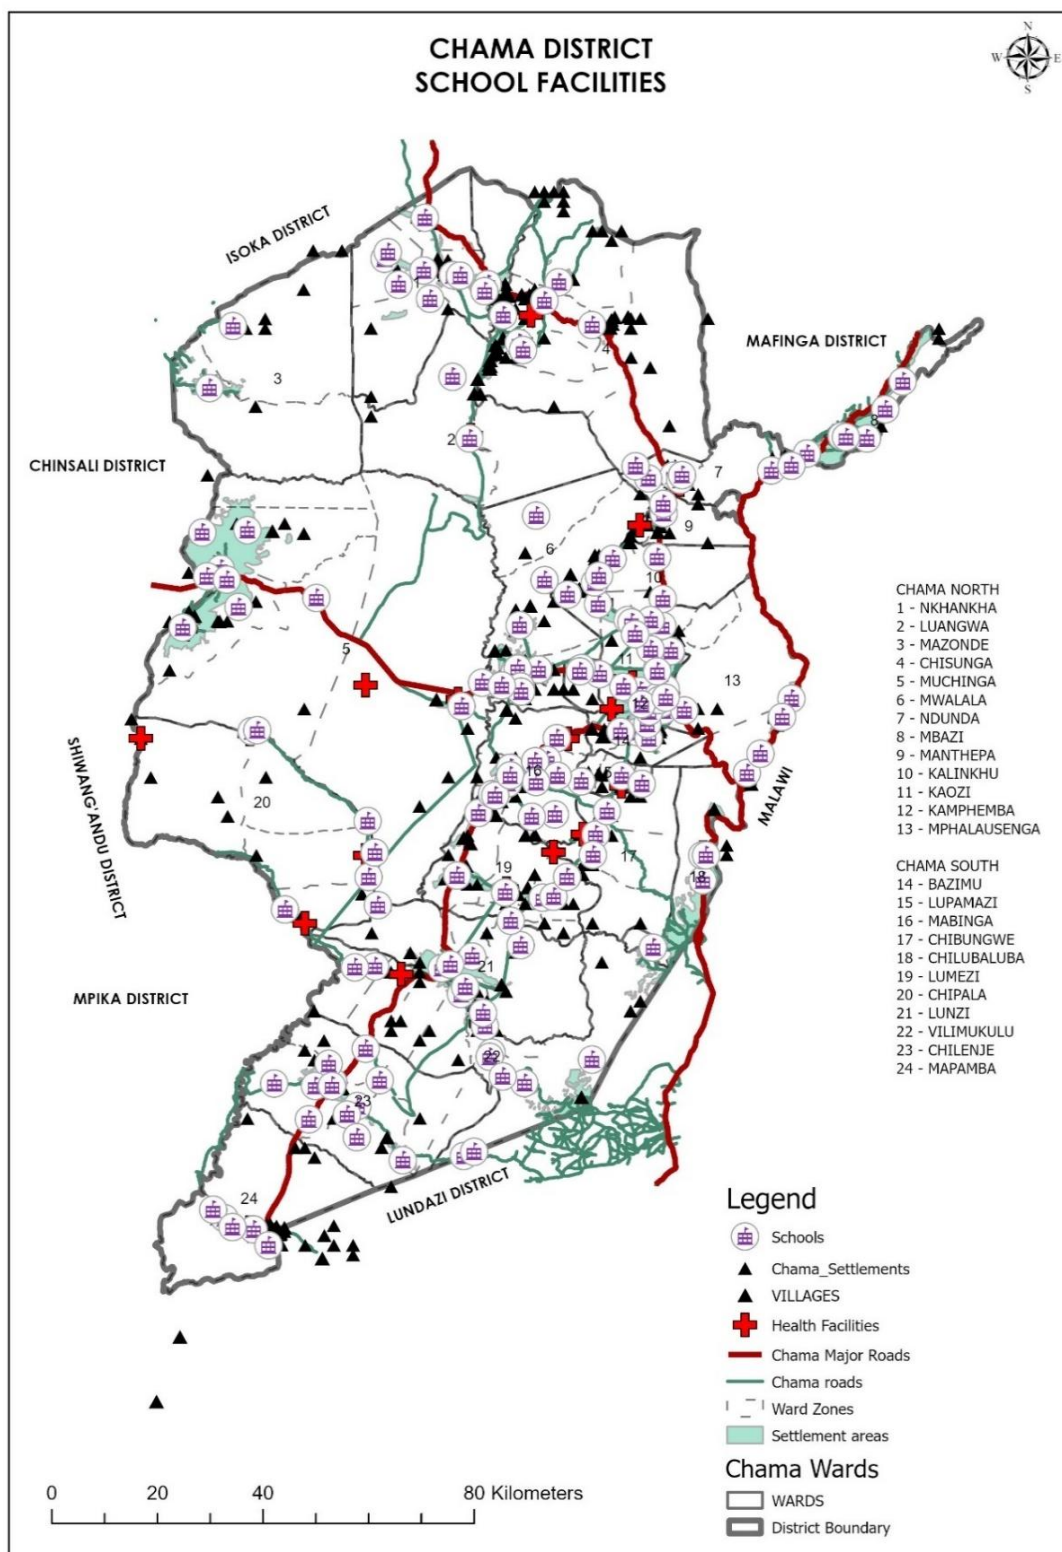

The district has a total of 984 teachers that are providing education services to the learners. Going by national standards, the quality of education services being provided in the district is measured by considering the number of available facilities against the standards and the number of teachers against the minimum standard teacher-pupil ratio as depicted in Table 24, Table 25, Table 26, and Table 27.

Table 24: Enrolment Rate as at 2024

S/N	CATEGORY	NUMBER OF INSTITUTIONS	ENROLMENT BY GENDER		TOTAL
			BOYS	GIRLS	
1	ECE (ANNEXED)	76	1752	1968	3720
2	PRIMARY (COMMUNITY)	69	5259	5228	10487
3	PRIMARY (GRZ)	80	15606	14843	30449
4	SECONDARY (GRZ)	12	3769	2411	6180

5	PRIVATE (Registered)	OWED	2	194	228	422
6	SEN (ANNEXED)		1	17	16	33
TOTALS				26597	24694	51291

Source: Chama DEBS' Office (2024)

Map 19: Education Facilities in Chama

Source: Chama Debs (2024)

In the primary category, 24 schools run up to grade 9 (Open Learning Centres). The total enrolment (G8 and G9) stood at 1, 837. The Special Education Needs (SEN) unit is annexed at Chama Primary School. The 76 ECE centres are annexed within some primary schools.

Table 25: Distribution of Teachers

ECE CENTRES			PRIMARY-GRZ			PRIMARY COMMUNITY			SECONDARY			GRAND TOTAL
Male	Female	Total	Male	Female	Total	Male	Female	Total	Male	Female	Total	
14	30	44	353	171	524	66	26	92	225	99	324	984

Source: Chama DEBS' Office (2024)

The district has one facility in the tertiary sector which is Chama Youth Skills Training Centre.

Teacher – Pupil Ratio

Going by the number of available teachers to provide education services and standards set (Table 25), the teacher-pupil ratio at early childhood education stand at 1:85, in primary schools, the ratio stood at 1: 67, and 1:19 in secondary schools. From these ratios, it is evident that the district is below the recommended standard of 1:25 by UNESCO.

Pupil -To -Desk Ratio, Average Pupil – To – Classroom Ratio, Desk to Pupil and Book -to-Pupil Ratio

There is still need for more books at all levels as depicted in the Table 26 below.

Table 26: Expected National Education Standards

S//N	CRITERIA	STANDARD	CURRENT STATUS (on average)
------	----------	----------	--------------------------------

1	Distance	5km to Education Facilities	
2	Teacher / Pupil Ratio	1:40	1:52
3	Classroom -Pupil Ratio		
	-ECE	1:25	1:85
	-Primary	1:40	1:67
	-Secondary	1:35	1:25
4	Desk -to -Pupil Ratio	1:2	1:8
5	Book -Pupil ratio		
	ECE	1:1	1:5
	PRIMARY	1:1	1:15
	SECONDARY	1:1	1:7

Source: Chama DEBS (2024)

Table 27: Desks and Average Pupil – to – Classroom Ratio

CLASSROOMS			DESKS AVAILABLE		AVERAGE PUPIL: DESK RATIO	AVERAGE PUPIL: CLASSROOM RATIO
Perm	Temp	Total	Available	Shortfall		
535	215	750	9,975	15,780	5:1	69:1

Source: Chama DEBS (2024)

There is still need of more classroom space and desks as depicted in Table 27.

Sanitary Facilities

The sector has a number of sanitary and water sources which are functional in different categories. Table 28 shows the statistics.

Table 28: Availability of Sanitary Facilities and Water Sources.

TOILETS AVAILABLE	WATER
-------------------	-------

Water borne	VIP	Pit Latrine	Total	Shortage	Piped Water	Hand pump Boreholes	Wells	None
84	1236	109	1429	631	16	98	31	9

Source: Chama DEBS (2024)

From the table above, there is still a large deficit of water and sanitation facilities in the district.

Assessment of the Overall Performance of the District

The education sector in the district has underperformed due to a shortage of teachers across early childhood, primary and secondary education levels. Additional factors contributing to this poor performance include teacher attrition, absenteeism caused by natural disasters and human-animal conflicts, as well as low re-enrollment rates following early marriages and teenage pregnancies. The performance of the district in the national examinations at different levels for the past three (3) years is as depicted in Table 29.

Table 29: Comparative Pass Rates in National Exams

S/N	YEAR	GRADE 7	GRADE 9	GRADE 12
1	2021	30.60%	50.60%	69.30%
2	2022	30.70	56.10%	54.90%
3	2023	51.30%	42.30%	56.60%

Source: Chama DEBS' Office (2024)

Progression Rates

From the Table 30 and Table 31, in 2023, the number of girls who enrolled for grade 7 examinations was high (1893). However, those who progressed to grade 8 were only 695 which imply that more than half the number (1198) of the learners failed.

It is also indicative that from 2022 to 2023 boys' progression rate to Grade 8 increased by 1.68% whilst that for girls reduced by 3.13%.

From 2022 to 2023, the progression rate to Grade 10 reduced by 4.96% for boys whilst that of girls reduced by a bigger percentage, that is 12.33%. From grade 7 and 9 levels, it is observed that the progression rate for girls keeps on declining.

Table 30: Progression Rate (Grade 7 to 8) in 2022 and 2023

2022			
GRADE 7 PROGRESSION RATE TO GRADE 8

1.2.1.2 Completion Rates

The completion rate at grade 12 in the past two years, that is 2022 and 2023 stood at 89.15% and 90.04% respectively. It can also be noticed from Table 31 and Table 32 that numbers of learners who missed exams were much lower than those at Junior Secondary level proceeding to grade 10.

Table 32: Completion Rates at Grade 12 (2022 and 2023)

2022				2023

TOTALS	728	649	89.15	TOTALS	823	741	90.04

Source: Chama DEBS' Office (2024)

Issues from Public Participation Process

Members of the community essentially identified two main problems: insufficient facilities for schooling and insufficiently good housing for primary and secondary school teachers. Due to crowded classrooms that impair students' ability to concentrate, the quality of services offered to communities has suffered.

Other issues were raised:

- ✓ Poor road infrastructure leading to schools,
- ✓ Lack of standardised early childhood development centres all primary schools,
- ✓ Lack of ECE teachers and play parks in some schools,
- ✓ Long distances to schools,
- ✓ Inadequate teaching staff
- ✓ Human-wildlife conflicts which lead to more absenteeism in highly wildlife infested areas
- ✓ Lack of adequate teaching and learning materials in some schools.

Impact of Changes Anticipated Over the Next Ten Years

The population is expected to increase by 2.5% each year. This will result in an increased demand for quality education services. Therefore, it will exert more pressure on the already inadequate teaching staff and learning space in all learning facilities. Therefore, construction of a Girls secondary school at Kaozi Resettlement Scheme will be paramount, a special education secondary school with boarding facilities near Chama Primary School. As such, there will be need for deployment of more specialized teaching staff.

Impact of Ongoing Development Programmes on Land Use and Population Distribution Patterns

It is anticipated that the on-going developmental programs will increase literacy levels among the locals and construction of more infrastructure will lead to limited land space for future constructions.

Impact on The Environment and Climate Change

Deforestation and air pollution are two ways that building school infrastructure can harm the environment. The ecology and landscape will be physically impacted by construction and rehabilitation projects, borehole drilling, leach field and water-borne toilet excavations, and other activities. The buildings that are built must withstand the effects of climate change.

However, environment and Climate Change have the following impacts on the sector;

- ✓ Destructions of staff houses and school buildings due to floods and storms leading to blown off of roofs
- ✓ Escalation of diseases and stress
- ✓ Compromised health of learners

Issues Arising Relating to Gender Groups and Vulnerable Groups

Chama District faces significant disparities in literacy rates among females, largely attributed to deeply ingrained sociocultural norms, early marriages, adolescent pregnancies, economic constraints, and geographical barriers to education. To address these inequities and promote inclusive education, the district has adopted a progressive re-entry policy. This policy enables pregnant girls to continue their education after childbirth, thereby safeguarding their right to education and fostering a more equitable learning environment.

External Factors Contributing to The Issue

Basically, the major external factor contributing to the identified issues was with regard to inadequate funding for school operations, and low staffing levels resulting from the national budget constraints.

Summary of Core Issues

- ✓ Distribution of education facilities is uneven
- ✓ High enrolments
- ✓ Inadequate staff accommodation
- ✓ Low staffing levels
- ✓ Inadequate sanitation infrastructure
- ✓ Inadequate skills training institutions in the district

COMMUNITY DEVELOPMENT AND SOCIAL SERVICES SECTOR

Key Government Priorities to Be Implemented at A Local Level

In promoting social well-being and development across the district, the government is focusing on integrating vulnerable and marginalized groups into development initiatives and enhancing access to social welfare services. These efforts aim to alleviate poverty and foster conditions conducive to economic growth. In line with this, Chama district has been rolling out several key programs.

Aligned with the goals of the Eighth National Development Plan (8NDP), the district prioritizes reducing poverty, vulnerability, and inequality while strengthening its policy and governance frameworks. Programs such as the Food Security Pack (FSP), Supporting Women's Livelihoods, Women's Empowerment, and Social Cash Transfers use registered beneficiary data, while initiatives like Self-help, Adult Literacy, Early Child Marriage prevention, and Family Reintegration are case-specific.

In terms of national policies, the district implements the National Policy on Disability, supporting the United Nations Convention on the Rights of Persons with Disabilities. This policy strives to make the country more inclusive for people with disabilities, with Chama district also acting. Efforts include inclusive infrastructure

designs for health facilities, schools, and markets, incorporating features like ramps to improve accessibility.

Assessment of the Existing State of Development

Statutory services focus on legislative aspects, particularly regarding child welfare, and include the Day Nurseries Act, CAP 313, the Adoption Act, CAP 54, the Maintenance Orders Act, CAP 55, the Juveniles Act, CAP 54, and the Probation of Offenders Act, CAP 93 of Zambia.

(a) Court Investigations

Social Welfare Officers, designated as Child Welfare Inspectors, conduct investigations on behalf of the courts to provide recommendations that support fair and beneficial outcomes for juvenile offenders. The department handles 6 to 10 court investigation cases per quarter.

(b) Probation of Offenders

Probation involves either institutional or community-based rehabilitation for juveniles in conflict with the law, supervised by a Probation Officer under the Probation of Offenders Act, CAP 93. This constitutional duty of the Department of Social Welfare aims to guide juveniles towards responsible citizenship through intensive counseling. The department typically manages at least 10 juvenile probation cases.

Non-Statutory Services

Non-statutory services include social assistance programs like the Public Welfare Assistance Scheme (PWAS), Drought Emergency Social Cash Transfer (D-ECT), and Social Cash Transfer (SCT), aimed at poverty alleviation in local communities.

(a) Public Welfare Assistance Scheme

PWAS focuses on providing necessary goods and services, not cash, to vulnerable groups, including the incapacitated and terminally ill. Due to limited funding, the support provided is often insufficient.

(b) Drought Emergency Social Cash Transfer (D-ECT)

This government initiative assists households affected by drought during the 2021/2022 and 2023/2024 farming seasons. It includes both vertical expansion (increased support for existing SCT beneficiaries) and horizontal expansion (support for new households affected by disasters). Chama currently has 5,389 D-ECT beneficiaries, totaling 7,105 since the first phase in 2023.

(c) Social Cash Transfer (SCT)

The SCT program provides bimonthly cash support to vulnerable households, aiming to reduce extreme poverty and prevent its transmission to future generations. Households with disabled members receive double the standard transfer, amounting to K800, while others receive K400. In Chama, 8,139 households benefit from SCT, and some have used their funds to invest in livestock and housing, thereby building assets and improving their quality of life.

Supporting Women's Livelihood (Grievance Redress Mechanism, Village Banking): The Supporting Women's Livelihoods (SWL) programmes to beneficiaries include, context-specific training, mentoring and peer support, the provision of productivity grants, and facilitation of savings groups.

Chama is one of the districts in Zambia implementing the GEWEL project. The district has three (3) sub-centre staff and 119 community-based volunteers (CBVs) who are trained and are now helping to run the project at community level.

Availability of Services

- ✓ Food Security Pack (Rain-Fed, Wetland, and Alternative Livelihood Intervention): Available in the wards of Lumezi, Mapamba, Mbazi, Kampemba, Chilenje, Vilimukulu, Lunzi, and Chilubaluba.
- ✓ Supporting Women's Livelihood: All wards are covered under this program, including grievance redress and village banking services, though CWACs not receiving benefits are still being identified. The Women Empowerment program is also accessible in all wards.
- ✓ Social Cash Transfer: Accessible in all wards.
- ✓ Early Child Marriage: NGOs, like UNICEF, target high-risk areas such as Chibale and Chikwa
- ✓ Family Reintegration, Child Justice, and Public Welfare Assistance Scheme (PWAS): Services cover all areas.

Service Quality

Community Development:

- ✓ Food Security Pack: High-quality service with packs distributed before the rains. Each pack includes 10 kg of maize seed, 3 bags of fertilizer (1 Urea, 2 D compound), and 10 kg of legumes (groundnuts, beans, cowpeas, and soybeans).
- ✓ Supporting Women's Livelihood: Beneficiaries receive grants promptly.
- ✓ Self-Help Program: CDF funding is disbursed on time.
- ✓ Adult Literacy: Classes are held twice weekly, led by instructors in the absence of officers.
- ✓ Women Empowerment: Available in all wards, with inputs provided on time.

Social Welfare:

- ✓ Social Cash Transfer: Funding is timely, ensuring prompt payments.
- ✓ Early Child Marriage: Includes training for guardians, case management, and mentoring young boys. CWAC structures support children's return to school.
- ✓ Family Reintegration: Focuses on reuniting juvenile offenders with families.
- ✓ Child Justice: Offers legal assistance to children based on case data.
- ✓ PWAS: Provides emergency aid to vulnerable residents, mainly in Chama, though funding is insufficient.

Issues Arising from the Public Participation Process

Community Development:

- ✓ Food Security Pack: The limited number of beneficiaries prompts calls for government expansion to cover more recipients across social protection programs.

Social Welfare:

- ✓ Social Cash Transfer: the district has a total number of 105 Social Welfare Assistance Committees (CWACs) of which 45 is in Chama South Constituency and 60 are in Chama North Constituency. However, the project is only in 93 CWACs thus, limited in beneficiary coverage.
- ✓ Early Child Marriage: Cultural challenges, such as parental resistance and fear of retaliation (witchcraft threats) toward CWAC members, hinder progress. Child offenders in Chama lack juvenile facilities and are placed with adult offenders.
- ✓ PWAS: Funding remains insufficient for program needs

Impact of Changes Anticipated Over the Next Ten Years

Impact of Environment and Climate Change

The district has recognized several key growth areas in response to the observed population increase and economic expansion. Major growth nodes include Chibale, Lundu, Kalinkhu, Kambombo, Chikwa, and Chifunda, while secondary growth nodes are Kanyebele, Katangalika, Tembwe, Kalovya, Chasato, Manga, and Kalasa. Investments in infrastructure, such as roads, schools, and healthcare facilities, are expected to drive economic activity, promote urbanization, and cause a shift in population centers toward newly developed zones. Improved social protection programs may improve living conditions, encouraging rural-to-urban migration in search of better opportunities and services. This shift is likely to lead to a change in land use, moving from traditional agriculture to a broader mix of residential and commercial developments. These transitions will also affect the allocation of resources and services, influencing both demographic trends and spatial planning within the district.

The impacts include shifts in temperature and rainfall patterns, which influence crop yields and the overall availability of food. Additionally, climate-related displacement leads to migration and social upheaval. In flood-prone areas, floods can also damage critical infrastructure within affected communities.

Issues Arising Relating to Gender Groups and Vulnerable Groups

The program helps women, girls, boys, men, vulnerable individuals, and those living with HIV/AIDS, as long as they fulfill the selection criteria, with no issues.

External Factors Contributing to The Issue

The district's role in handling caseloads is limited because the Ministry of Community Development and Social Services determines the number of cases it oversees. Similarly, the district lacks decision-making power regarding the funding it receives for its programs, making it reliant on external allocations to carry out its initiatives.

Furthermore, the district's ability to influence the effectiveness of its programs is impacted by the capacity of other organizations involved in areas like Child Justice and early marriage prevention. Since these partners operate independently, the district cannot fully manage or direct their contributions.

When it comes to community beliefs and practices, the district does not have direct authority to enforce cultural changes. Instead, it relies on awareness initiatives and educational programs, such as those aimed at teaching young men about responsible adulthood. These efforts serve to gradually influence attitudes within the community, fostering a shift toward more positive societal norms.

Summary of Core Issues

- ✓ Lack of facilities to accommodate victims and offenders of Early Child Marriages
- ✓ Inadequate funding for programmes under Public Welfare Assistance Schemes
- ✓ Limited beneficiaries of Food Security Pack and Social Cash Transfer

SUMMARY OF CORE ISSUES

Table 33: Summary of core issues

Economic Transformation and Job Creation	Human and Social Development	Environmental Sustainability	Good Governance
Limited access to finance Limited access to a sustainable market Low agricultural yields Untapped tourism potential Informal mining activities Limited entrepreneurship skills Limited animal production Lack of access to alternative energy sources Lack of factories for value addition Insufficient agriculture storage facilities Insufficient livestock and fisheries infrastructure Limited and poor transport infrastructure Limited energy infrastructure Limited communication infrastructure	Limited access to clean and safe water Insufficient sanitation infrastructure Inadequate education facilities Lack of skills training institutions Inadequate health facilities High-dependency age groups Early marriages and teen pregnancies Inadequate housing infrastructure Lack of safe spaces	Deforestation Extinction of wildlife Human-wildlife conflicts Unsustainable agriculture practices Uncontrolled mining activities	Unplanned settlement expansion Unplanned customary land Less participation of vulnerable groups in civic leadership Inadequate security infrastructure

PART THREE: DEVELOPMENT FRAMEWORK

Introduction

The Development Framework was created based on a comprehensive analysis of key issues highlighted in the Planning Surveys and Issues Report from the previous chapter. It serves as the guiding plan for the district's development from 2025 to 2035.

The vision for Chama District

With the perspective of the future at hand, Chama district's long-term vision is:

“An interlinked, socio-economically sound and environmentally sustainable district by 2045”

Mission statement for Chama district

To enhance socio-economic development through facilitating an interlinked transport network, infrastructural development, social well-being, and diversified economy in a sustainable manner.

Key aspects of the vision

Chama district crafted its vision for the next ten years through reflexivity or self-reflection; the district took into consideration;

Interlinkages - Chama District's strategic location, bordering six districts and one international border, presents vast trade opportunities. However, inadequate transportation and communication infrastructure has hindered regional and

international trade growth. To overcome this, the district aims to develop an integrated transport and communication network that will unlock potential in agriculture, tourism, and other sectors.

Socio-economically sound - The vision seeks to create a prosperous district where economic growth and social well-being coexist. This will be achieved through fostering a vibrant economy, reducing poverty and inequality, promoting entrepreneurship and innovation, collaborations and partnerships, and ensuring access to quality services.

Environmental sustainability - Chama District's natural riches are threatened by unsustainable practices. Chama will shift to eco-friendly lifestyles and renewable energy sources, like solar power, that will protect the environment and secure a sustainable future.

Ultimately, it is the combined synergy or unified function of these factors that will bring Chama district's vision to life.

Planning Values for the Chama District IDP

As a basis to realize this vision, Chama district has identified and adopted the following values;

Transparency and Trust: Open communication, honesty, and reliability in all planning processes and decision making.

Inclusivity and Respect: Valuing diversity, engaging stakeholders, and respecting community perspectives.

Shared Purpose and Vision: Craft clear, unified long-term goals that will give purpose to collaboration, motivating stakeholders to work towards a common objective and resolve conflicts constructively.

Adaptability and Resilience: Embracing flexibility, learning from experience, and coping with uncertainty.

Accountability and Responsibility: Taking ownership of planning decisions and actions.

These values will be foundational to nurturing a collaborative environment where the district and multiple stakeholders will achieve a unified long-term vision effectively.

Policies to direct development of the IDP Area

The Integrated Development Plan (IDP) outlines seven (07) key policies or overarching goals to guide Chama District's development.

Table 34: Suggested policies, objectives, programs, and activities to address core issues

POLICIES	OBJECTIVES	PROGRAMS	ACTIVITIES
DIVERSIFICATION OF THE LOCAL ECONOMY THROUGH TOURISM PROMOTION, AGRICULTURAL DIVERSIFICATION, AND VALUE ADDITION	Promote tourism diversification Improve agricultural production and productivity Promote value-addition and manufacturing Promote Traditional and Non-traditional minerals	- Infrastructure development - Tourism product development - Tourism promotion and marketing - Wildlife management - Skills training - Agricultural mechanization - Farmer input support - Agroforestry and tree crop development	- Rehabilitation of 10 kilometers and construction of 10 kilometers of outfitter roads in the district - Construction of 3 bush camps Kambombo, Tembwe, and Chikwa, 1 5-star hotel Chifunda, and 1 lodge in Lundu Chiefdom. - Establish smallholder low-cost community irrigation schemes in 7 camps (Chama Central Camp (kapalakonje), kalovya,kanyelele,lundu,chibale, mundalanga)

		- Agribusiness development - Irrigation development - Fisheries and aquaculture development - Livestock development - Extension services support - Early warning and surveillance systems - Farm block and resettlement schemes development - Artisanal and small-scale mining development	- Promote crop diversification of soya beans, groundnuts, and rice by establishing a food fare center/venue in the district. - Strengthen existing early warning systems by installing early warning equipment in all 31 camps in the district - Promote Climate Smart Agriculture through establishing farmer field demonstration centres (CSA) in all 30 agricultural camps of Chama district by 2033. - Enhance market linkages through establishing 8 market centres in the district and 7 crop storage depots - Promote agricultural technologies and value chains for rice production by establishing an agro-processing industry
--	--	---	---

			- Construct 4 livestock centres in Kalovya, Kanyelege, Chasato, and Chizimba - Construct 4 livestock market centres in Chifunda, Mapamba, Chikwa, and Tembwe - Construct 2 livestock slaughter facilities - Plant 40ha of pasture (10ha Farmer's training centre, 10ha Chasato, 10ha Kaozi, and 10ha Kanyelege) - Construct 5 dip tanks (FTC, Kanyelege, Chasato, Kalovya, and Kaozi) - Promote artisanal small-scale mining through the establishment of a Public Private Partnership campaign. - Settlement fencing in areas prone to Human-Wildlife conflict (Chifunda, and Chikwa for a start)
--	--	--	--

DEVELOPMENT OF TRANSPORT AND COMMUNICATION INFRASTRUCTURE	- Enhance road infrastructure - Rehabilitate township roads - Maintain district airstrips - Improve district communication	- Road development and maintenance - Aviation development - Communication technology development	- Construction of 500 Km of feeder roads - Construction of 12 Bridges and crossing points - Rehabilitation of 422 km of feeder roads - Rehabilitation of 7 crossing points - Installation of streetlights - Construction of drainages - Vegetation control along major roads and the airstrips - Upgrade 1no. Airstrip to accommodate foreign tourists - Construction of 5no. communication mast - Construct a truck park
ENHANCEMENT OF SOCIAL SERVICE DELIVERY	- Increase access to decent and affordable housing	Public and social housing Settlement improvement Water quality monitoring	- Improve/upgrade Mtayachalo settlement - Construction of two dams for water storage and irrigation

	- Improve access to clean and safe water supply - Improve Sanitation Services - Enhance access to quality, equitable, and inclusive education - Increase access to quality healthcare - Enhance welfare and livelihoods of poor and vulnerable people	Infrastructure development and maintenance Solid waste management Sanitation and hygiene promotion Increase access to quality healthcare Early childhood education Primary education Adult literacy Secondary education	- Establish and enhance the management of 2 well fields, 25 local Aquifers, and 5 boreholes in the district - Construct 10 mechanized water systems within ten institutions years - Promote the attaining of the ODF status in all 24 wards by 2035 - Promote public sanitation by constructing 5 public toilets in 5 public institutions in the next 5 years - Construction of 3 mini-hospitals in Chikwa, Chibale, and Lundu - Construct 3 secondary schools (1 in Chiri Zone, a Girls Boarding Secondary school in Kaozi, and a special needs secondary school in Kamphemba) - Upgrade 5 community schools to primary level (Makeni, Kajimomo,
--	---	---	---

	- To ensure that all communities in the district have access to quality education services - To ultimately reduce maternal and infant deaths and improve health service care - To raise community awareness of the importance of education	Samamba, Mwanisiya, and Sambako) - Construction of 5 CRBs in the next 10 years - Establish ECE centers in all 149 primary and community schools by 2035 - Establish recreational facilities in all 161 schools in the next 10 years - Connect 90% of households in the urban area to the water supply and reticulation network by 2035 - Provide 90% of rural households with clean and safe water by 2035 - Rehabilitate the old water storage tank - Construct 1 sewer pond and procure 1 vacuum tanker - Enhance solid waste management (Procure 1 skip loader, two skip bins, construct 2
--	--	---

			refuse bays, and have dumpsite approved by ZEMA)
PROMOTE ENERGY MIX GENERATION AND DISTRIBUTION	- Enhance the generation, transmission, and distribution of electricity - Enhance management of petroleum products	- Electricity transmission and distribution - Energy efficiency promotion - Off-grid energy solutions - Green and renewable energy - Infrastructure development	- Upscale distribution network to 1000 households by 2035 - Facilitate the establishment of a solar power plant in Kambombo chiefdom by 2035 - Facilitate the establishment of a filling station in the district by 2035
ENHANCED ACCESS TO FINANCIAL SERVICES	Women, Youth and community empowerment	Livelihood and empowerment schemes decentralization	- Facilitate the disbursement of CDF Grants and Loan empowerments - Facilitating for backstopping of cooperatives applying for empowerment funding
ENHANCE ENVIRONMENTAL	Enhance resilience to natural hazards, climate	- Land, forest, and water management	- Place 250,000 Ha under community forest management

PROTECTION AND SUSTAINABILITY	change, and wildlife-related risks	- Green and renewable energy - Early warning system - Resilient infrastructure development - Wildlife risk management - Climate change adaptation - Flood risk management - Drought risk management	- and promote smart forest management within 5 years. (Mulilo, Chibale, Kambombo) - Strengthening the capacity of exiting 17 CFMGs - Restore 500 hectares of degraded forest area by establishing and managing a nursery of 500,000 tree seedlings - Encouraging forest-based industries through capacity-building training in the 17 CFMGs communities - Encouraging forest-based industries (bee-keeping) - Strengthen Climate Change Adaptation (construct 10 mechanized water systems in strategic institutions within 10 years) - Promote research and development in water resources
-------------------------------	------------------------------------	---	--

			and management by establishing one climate-smart water harvesting technology - Promoting Climate Smart Agriculture (CSA) in the 30 agricultural camps of Chama district by 2033. - Establish Off-Grid Energy Solutions (a Solar power plant in the Kambombo area) - Training agriculture officers in 31 camps in early warning systems (surveillance, data collection, and reporting).
PROMOTE INCLUSIVE GOVERNANCE AT THE LOCAL LEVEL	- Enhance citizen participation in decision-making processes. - Foster transparency and	- Participatory planning and governance - Citizen engagement - Inclusive services programme - Transparency and accountability program	- Facilitate citizen-led planning such as planning and budgeting land use planning - Holding regular public hearings and town hall meetings - Implement a Citizen Report Card Initiative

	accountability in local governance. - Promote equal access to public services and opportunities. - Strengthen community engagement and social cohesion. - Strengthen land management and administration -	- Capacity building - Social inclusion - Partnership and collaboration - Land management and administration	- Training and orientation of local officials - Vulnerable group's outreach initiatives - Facilitate the establishment of two planning agreements in Kambombo and Chikwa chiefdoms
--	---	--	--

Development objectives, programmes, and development strategies

Table 35: Development objectives, programmes, and development strategies

SDA 1	ECONOMIC TRANSFORMATION AND JOB CREATION
-------	--

SECTORS	TOURISM, AGRICULTURE, MINING, AND MANUFACTURING						
MAIN OBJECTIVE	DIVERSIFICATION OF THE LOCAL ECONOMY THROUGH TOURISM PROMOTION, AGRICULTURAL DIVERSIFICATION, AND VALUE ADDITION						
SPECIFIC OBJECTIVES	STRATEGIES	PROGRAMMES	PROJECTS	OUTPUTS	OUTCOMES	OUTPUT INDICATORS	OUTCOME INDICATORS
To promote local tourism	Develop the outfitter road infrastructure	Infrastructure development	Rehabilitation of 10 kilometers and construction of 10 kilometers of outfitter roads	Kilometers of outfitter roads constructed and rehabilitated	Improved and increased road users for outfitter activities	No. of kilometers of outfitter roads rehabilitated and 10 kilometers of outfitter roads constructed	More users utilizing outfitter roads Increased number of outfitter activity participants/ tourists
To promote local tourism	Developing hospitality and tourism infrastructure	Infrastructure development	Construction of 3 bush camps Kambombo, Tembwe, and Chikwa, 1 5-star hotel Chifunda, and 1 lodge in Lundu Chiefdom.	Bush camps, 5-star hotels, and lodges constructed	Improved hospitality and tourism environment	No. of bush camps, 1 5-star hotel, and 1 lodge constructed	Improved hospitality and tourism environment Increased number of tourists Increased local revenue

Enhancement of wildlife management in the district	Restocking of wildlife	Wildlife Management	Large mammal aerial surveys conducted Restocking of large mammals in Nyika National Park	Elephants and buffaloes restocked	Population of key species increased	No. of elephants and Buffaloes restocked	Increased number of tourists in the district
To promote crop diversification	Promoting agricultural crop diversification	Agribusiness development	Promote crop diversification of soya beans, groundnuts, and rice by establishing a food fare center/venue in the district.	Food fare centers established	Increased diversification of crops produced (Rice, soya beans, and ground nuts)	No. of food fare centres established	Increased production of rice, soya beans, and ground nuts
To improve knowledge of food processing and nutrition	Facilitate food processing and nutrition training	Agribusiness development	Conduct Training in food processing and nutrition in all 31 camps	Farmer camps trained in food processing and nutrition	Increased number of camps trained in practicing food processing and nutrition	No. of farmers camps trained in food processing and nutrition	Improved practice of food processing and nutrition in agricultural camps
To improve disaster resilience	Establishing early warning systems equipment in all 31 camps	Early warning and surveillance systems	Strengthen existing early warning systems by installing early warning equipment in all 31 camps in the district	Camps with established early warning systems	Improved resilience to climatic impacts	No. of camps with established early warning systems	Improved resilience to climatic impacts Reduced loss of crop harvests

To promote climate-smart agriculture	Establish farmer field demonstration centres	Irrigation development	Promote Climate Smart Agriculture through establishing farmer field demonstration centres (CSA) in all 31 agricultural camps of Chama district by 2035.	Farmer field demonstration centers established	Increased number of camps practicing sustainable agriculture	No. of field demonstration centers established in 31 camps	Improved agricultural practices and environmental sustainability
To increase access to the market and storage for crop harvests	Establish market centers and construct crop storage depots	Agribusiness development	Enhance market linkages by establishing 8 market centers in the district and constructing 7 crop storage depots	Market centers established and crop storage depots constructed	Increased access to the market and crop storage depots	No. of market centres established and crop storage depots constructed	Improved access to the market and improved crop storage Increased agricultural production and productivity
To enhance rice production and develop the rice processing value chain	Establish an agro-processing industry	Agribusiness development	Promote agricultural technologies and value chains for rice production by establishing an agro-processing industry	Agro-processing industries established	Increased rice processing	An established rice agro-processing industry	Improved rice processing and trade both within and outside the district

To enhance livestock management in the district	Establishing livestock centres	Livestock development	Construct 4 livestock centres in Kalovya, Kanyebele, Chasato, and Chizimba	Livestock centres constructed	Improved livestock management	No. of constructed livestock centres	Improved livestock trade in the district
To enhance livestock trade in the district	Establishing livestock market centres	Agribusiness development	Construct 4 livestock market centres in Chifunda, Mapamba, Chikwa, and Tembwe	Livestock market centres established	Increased livestock trade	No. of livestock market centres established	Increased number of livestock farmers and traders
To promote hygiene in livestock product management	Constructing slaughter facilities	Agribusiness development	Construct 2 livestock slaughter facilities	Livestock slaughter facilities constructed	Improved management of livestock products	No. of slaughter facilities constructed	Improved handling of livestock products Reduced spread of diseases
To increase pasture for livestock	Plant pasture for livestock grazing	Livestock development	Plant 40ha of pasture (10ha Farmer's training centre, 10ha Chasato, 10ha Kaozi, and 10ha Kanyebele)	Hectares of Pasture planted	Increased pasture for livestock grazing	No. hectares of pasture planted	Improved livestock production Improved livestock product quality
To improve livestock health	Construction of dip tanks	Livestock development	Construct 5 dip tanks (FTC,	Dip tanks constructed	Improved livestock health	No. of dip tanks constructed	Improved livestock health

			Kanyebele, Chasato, Kalovya, and Kaozi)				Improved livestock trade
To promote traditional and non-traditional minerals	Establish Public Private Partnerships encouraging small-scale artisanal mining development	Artisanal and small-scale mining development	PPPs for artisanal small-scale mining established in all 7 Chiefdoms (Kambombo, Lundu, Chibale, Mulilo, Chikwa, Tembwe, and Chifunda)	PPPs established	Improved artisanal small-scale mining economy	No. of PPPs for artisanal small-scale mining established	Improved economic recognition of traditional and non-traditional minerals in Chama district both nationally and internationally
To promote livestock production in the district	Fence off human settlements to reduce human-wildlife conflict cases	Livestock development	Settlement fencing in areas prone to Human-Wildlife conflict (Chifunda, and Chikwa for a start)	Affected settlement areas fenced off	Reduced number of human-wildlife conflict cases and loss of livestock	No. of affected settlement areas fenced off	Increased livestock production and livestock trade
SECTORS	TRANSPORT AND COMMUNICATION						
MAIN OBJECTIVE	DEVELOPMENT OF PUBLIC TRANSPORT AND COMMUNICATION INFRASTRUCTURE						
SPECIFIC OBJECTIVES	STRATEGIES	PROGRAMMES	PROJECTS	OUTPUTS	OUTCOMES	OUTPUT INDICATORS	OUTCOME INDICATORS
To upgrade the district's	To upgrade township	Road development	Reconnaissance,	km of	Improved mobility	No. of km of township roads	Provides easy access and

road network by 2035	roads to bituminous standard	and maintenance	survey and mapping of road network Facilitate the upgrading of 15km of township roads to bituminous standard Facilitate construction of 3 Crossing points	township roads to bituminous standard No. of km of township roads surveyed No. of crossing points constructed	within the district resulting in increased economic activity and reduced number of accidents Comprehensive database of township roads in the district Improved accessibility	upgraded to bituminous Standard No. of km of township roads surveyed No. of crossing points constructed	reduces stagnant water.
	Rehabilitate feeder roads to all-weather gravel standard		Facilitate upgrading of km of feeder roads to all-gravel standard	km of feeder roads upgraded to all-gravel standard	Better accessibility to isolated regions within the district for farmers and locals	No. of km of feeder roads upgraded to gravel standard	Reduced development gap between rural and urban areas
To construct a modern, efficient, and safe bus station that enhances the public transportation in the district	Conduct feasibility studies and site analysis Public consultations and stakeholder engagement	Construction and infrastructure development	Facilitate the construction of modern bus station	Bus station constructed	Improved public transportation	No. of bus station constructed	Improved public perception of public transportation

Maintain district airstrips	Upgrade the district airstrips	Aviation development	Facilitate the upgrading of 1no. Airstrip Vegetation control around 3no. airstrips	Airstrips upgraded No. of airstrips maintained	Improved airfield accessibility Stimulate local economic growth	No. of airstrip upgraded 3no. Airstrip maintained	Increased number of flights landing
Improve district communication infrastructure by 2035	Construction of communication mast	Communication technology development	Facilitate the construction of 5no. Communication mast	Communication mast constructed	Improved communication coverage and quality Enhanced connectivity and accessibility	No. of communication masts constructed	Increase in mobile network coverage (%) Reduction in dropped calls/complaints (%)
SECTORS	EDUCATION, HEALTH AND SOCIAL SERVICES						
MAIN OBJECTIVE	ENHANCEMENT OF SOCIAL SERVICE DELIVERY						
SPECIFIC OBJECTIVES	STRATEGIES	PROGRAMMES	PROJECTS	OUTPUTS	OUTCOMES	OUTPUT INDICATORS	OUTCOME INDICATORS
To increase access to decent public and social housing	Constructing housing infrastructure	Public and social housing	Construction of 28 staff houses (Departments of Agriculture-3, Veterinary-3,	Staff houses constructed	Improved accommodation for staff	No. of staff houses constructed	Increased and improved housing for staff

			Education-6, Forestry-3, Health-8, Zambia Police- 3, and Immigration-2)				Improved access to public services provision
To promote coordinated land use and settlement development	Improve/upgr ade the settlement area	Settlement improvement	Improve/upgra de Mtayachalo settlement	Settlement upgraded	Improved land use and coordinated area development	No. of settlement area upgraded	Improved living environment and coordinated area development
To improve water storage and irrigation	Construction of dams	Infrastructure development and maintenance	Construction of two dams for water storage and irrigation	Dams constructed	Improved water storage and irrigation	No. of Dams constructed	Improved water supply and irrigation
To enhance water supply and resource management	Protecting well fields and local aquifers and drilling boreholes	Infrastructure development and maintenance	Establish and enhance the management of 2 well fields, 25 local Aquifers, and 5 boreholes in the district	Well fields and local aquifers are protected as well as drilled boreholes	Improved water management and water supply	No. of well fields and aquifers protected No. of boreholes drilled	Enhanced water resource management (well fields and aquifers protected) and improved water supply
To improve institutional water supply	Construct mechanized water reticulation systems	Infrastructure development and maintenance	Construct 10 mechanized water systems within ten institutions years	Mechanized water systems constructed	Improved institutional water supply	No. of mechanized water systems constructed	Improved institutional water supply, hygiene, and sanitation

To improve public hygiene and sanitation in public institutions	Construction of public toilets in public institutions	Sanitation and hygiene promotion	Promote public sanitation by constructing 5 public toilets in 5 public institutions in the next 5 years	Public sanitation facilities constructed in public institutions	Improved sanitation in public institutions	No. of public toilets constructed in public institutions	Improved sanitation in public institutions Reduced contraction and spread of diseases
To enhance health care service provision	Construction of mini-hospitals	Increase access to quality health care	Construction of 3 mini-hospitals in Chikwa, Chibale, and Lundu	Mini-hospitals constructed	Improved access to quality health care	No. of mini-hospitals constructed	Improved healthcare service provision Reduced fatalities and improved disease control
To enhance access to quality education	Construction of education facilities	Secondary education	Construct 3 secondary schools (1 in Chiri Zone, a Girls Boarding Secondary school in Kaozi, and a special needs secondary school in Kamphemba)	Secondary schools constructed	Improved access to quality secondary education	No. of secondary schools constructed	Improved quality of secondary education

To enhance primary level education	Upgrade community schools to primary level	Primary education	Upgrade 5 community schools to primary level (Makeni, Kajimomo, Samamba, Mwanisiya, and Sambako)	Community schools upgraded	Increased access to primary level education	No. of community schools upgraded to primary level schools	Improved quality of primary level education
To increase access to quality education	Construction of classroom blocks (CRBs)	Enhance access to quality, equitable and inclusive education	Construction of 5 CRBs in the next 10 years	Classroom blocks constructed	Improved access to quality equitable, and inclusive education	No. of classroom blocks constructed	Improved access to quality equitable, and inclusive education at all levels.
To increase access to early childhood education (ECE) in the district	Establish ECE centres	Early childhood education	Establish ECE centres in all 149 primary and community schools by 2035	ECE centres established	Improved access to ECE	No. of ECE centres established	Improved ECE
To promote physical education and physical health of learners	Establish recreational facilities	Infrastructure development	Establish recreational facilities in all 161 schools in the next 10 years	Recreational facilities established	Improved access to recreational facilities	No. of recreational facilities established	Improved physical health of learners

To enhance access to water supply in urban areas	Extend water reticulation and supply network	Infrastructure development and maintenance	Connect 90% of households in the urban area to the water supply and reticulation network by 2035	Households in the urban area connected to the water reticulation and supply network	Improved access to water supply in urban areas	% of households connected to water supply in urban areas	Improved water supply and sanitation in urban areas
To enhance access to water supply in rural areas	Drilling, equipping and rehabilitation of boreholes	Infrastructure development and maintenance	Provide 90% of rural households with clean and safe water by 2035	Water points provided to 50 villages giving access to clean safe water	Improved access to clean water supply in rural areas	No. of water points provided to 50 villages giving access to clean safe water	Improved water supply and sanitation in rural areas
To improve water management	Rehabilitate water storage tank	Infrastructure development and maintenance	Rehabilitate the old water storage tank	Rehabilitated water storage tank	Improved water supply and management	No. rehabilitated water storage tanks	Improved water supply and management
To improve sanitation levels in the district	Construct sewer pond and procure vacuum tanker	Sanitation and hygiene promotion	Construct 1 sewer pond and procure 1 vacuum tanker	A sewer pond constructed and a vacuum tanker procured	Improved sanitation	No. of sewer ponds constructed and vacuum tankers procured	Improved sanitation, hygiene, and public health
To enhance solid waste management	Procure skip loader, skip bins, construct refuse bays, and have dumpsite	Solid waste management	Enhance solid waste management (Procure 1 skip loader, two skip bins, construct 2 refuse bays, and	Skip loader and skip bins procured, refuse bays constructed, and dumpsite	Improved solid waste management	No. of skip loaders and skip bins procured No. of refuse bays constructed	Improved sanitation and public hygiene

	approved by ZEMA		have dumpsite approved by ZEMA)	approved by ZEMA		No. of dumpsite approved by ZEMA	
To enhance child and adolescent protection and reduce vulnerability	Assist vulnerable children and adolescents through caseload management	Child protection	Child protection program (children and adolescents assisted through community caseload management)	Caseloads managed	Enhanced child and adolescent protection Reduced child vulnerability	No. of caseloads managed	Enhanced child and adolescent protection Safer environment for children and adolescents
To reduce vulnerability levels	Promote access to social cash transfer	Social Cash Transfer	Social Cash Transfer	Caseload managed	Reduce vulnerability levels	No. of caseloads managed	Reduce vulnerability levels
To enhance access to disability services	Assist vulnerable differently-abled individuals through caseload management	Disability services	Disability services (Caseload management for vulnerable differently-abled individuals)	Caseload managed	Enhanced access to disability services	No. of caseloads managed	Reduced vulnerability for differently abled individuals
To reduce vulnerability levels among women within the district	Enhance access to cash grants, training in life skills, micro-credit, and empowerment	Livelihood and empowerment schemes decentralization	Livelihood and Empowerment Decentralisation (Women empowerment)	Caseload managed	Enhance access to cash grants, training in life skills, micro-credit, and empowerment	No. of caseloads managed	Reduced vulnerability levels for women

	t support for vulnerable women				support for vulnerable women		
To enhance access to welfare	Promote access to self-help initiative programs	Self-help initiatives	Self - Help Initiatives promotion (Training in mindset change, access to food security packs, support with livestock, and support with agricultural insurance)	Caseload managed	Increased number of vulnerable beneficiaries accessing the program	No. of caseloads managed	Reduced vulnerability levels Increase in innovative ventures and alternative livelihoods
SECTORS	ENERGY						
MAIN OBJECTIVE	PROMOTE ENERGY MIX GENERATION AND DISTRIBUTION						
SPECIFIC OBJECTIVES	STRATEGIES	PROGRAMMES	PROJECTS	OUTPUTS	OUTCOMES	OUTPUT INDICATORS	OUTCOME INDICATORS
To enhance access to electrical power supply	Extension of the electrical power supply grid	Electricity transmission and distribution	Upscale distribution network to 1000 households by 2035	Households connected to the electrical power supply grid	Increased number of houses with access to electrical power supply	No. of households connected to the electrical power supply grid	Increased number of households with access to electrical power supply
To promote the establishment of	Establish a solar power plant	Green and renewable energy	Facilitate the establishment of a solar power	Solar power plant established	Increased alternative energy sources	No. of solar power plants established	Increased number of

alternative energy sources			plant in Kambombo chiefdom by 2035				alternative energy sources Reduced dependency on hydro-electric power supply
To establish a local supply of fuel	Facilitate the establishment of a filling station	Infrastructure development	Facilitate the establishment of a filling station in the district by 2035	Filling station established	Established access to local fuel service provision	No. of filling stations established	Improved supply of fuel in the district
SECTORS							
MAIN OBJECTIVE	ENHANCE ENVIRONMENTAL PROTECTION AND SUSTAINABILITY						
SPECIFIC OBJECTIVES	STRATEGIES	PROGRAMMES	PROJECTS	OUTPUTS	OUTCOMES	OUTPUT INDICATORS	OUTCOME INDICATORS
To enhance forest management and protection	Establish community forest management area and promote smart forest management	Sustainable land, forest, and water management	Place 250,000 Ha under community forest management and promote smart forest management within 5 years. (Mulilo, Chibale, Kambombo)	Hectares placed under community forest management	Enhanced forest management and protection	No. of hectares placed under community forest management	Improved forest resource management and protection

To enhance forest management and protection	Capacity build CFMGs	Sustainable land, forest, and water management	Strengthening the capacity of exiting 17 CFMGs	CFMGs capacity-built in forest management	Improved forest management	No. of CFMGs capacity-built in forest management	Improved forest management and protection Reduced rate of forest depletion
To restore degraded forest areas	Establish a nursery of seedlings and plant them to replenish degraded forest areas Protect riverine ecosystem	Sustainable land, forest, and water management	Restore 500 hectares of degraded forest area by establishing and managing a nursery of 500,000 tree seedlings	Hectares of degraded forest area replenished	Revived forest areas and vegetation along riverbanks	No. of hectares of degraded forest area replenished	Revived forest cover Reduction in erosion Increase in riverbank vegetation cover
To reduced dependence on forest resource depletion	Capacity-build CFMGs in forest-based industrialisation for forest sustainability	Sustainable land, forest, and water management	Encouraging forest-based industries through capacity-building training in the 17 CFMGs communities	CFMGs capacity-built in forest-based industries	Reduced dependency of forest-depleting economic activities such as charcoal production	No. of CFMGs capacity-built in forest-based industries	Reduced forest depletion rate Increased alternative forest-based economic activities
To promote research in climate-smart technology for climate change resilience	Establish a climate-smart technology and research it to deduce impact in mitigating climate change	Sustainable land, forest, and water management	Promote research and development in water resources and management by establishing one climate-smart water	Climate-smart technologies established (Water harvesting climate-smart technology)	Increased knowledge on water management for climate resilience and climatic impact mitigation	No. of climate-smart technologies established (Water harvesting climate-smart technology)	Enhanced knowledge on water management and harvesting for climate change resilience

			harvesting technology				Improved flood water control
To encourage sustainable agriculture	Enhance training in climate smart agriculture	Sustainable agriculture promotion	Promoting Climate Smart Agriculture (CSA) in the 30 agricultural camps of Chama district by 2033.	Climate smart agriculture technologies promoted in 31 camps	Increased number of camps implementing climate smart agriculture	No. of climate smart agriculture technologies promoted in 31 camps	Increased number of climate smart technologies implemented in 31 camps Improved agricultural practices
To promote the establishment of alternative energy sources	Establish clean and renewable off-grid energy source (Solar power plant)	Green and renewable energy	Establish Off-Grid Energy Solutions (a Solar power plant in the Kambombo area)	Off-grid energy solutions established	Increased number of alternative energy sources	No. of off-grid energy solutions established	Increased renewable energy sources Reduced dependency on wood fuel
To improve disaster mitigation and adaptation	Flood preparedness, response and recovery	Flood Risk assessment and mapping Flood plain management Community-based flood risk management	Conduct flood-risk mapping and assessment Training camp officers in 31 camps in early warning systems Conduct community flood	Flood warning systems installed Flood-risk maps produced Number of community training sessions conducted	Reduced flood-related damage Decrease flood-related displacement Improved public awareness of flood risk	2no. flood-risk maps produced 50% population covered by early warning systems 24 community training sessions conducted	Reduction in flood-related damages Decrease in flood-related displacement Increase in public awareness of flood risk

			preparedness training Develop a flood evacuation plan	Evacuation plans established	Enhanced emergency response capabilities Reduced economic losses	1 no. flood evacuation plan developed	Reduction in response time to flood emergencies Economic losses due to flooding
	Drought preparedness, response and recovery	Drought Risk assessment and mapping Water conservation and efficiency Early warning systems Community-based drought management	Water harvesting and storage infrastructure constructed Irrigation system development community drought preparedness training	Number of water harvesting structures built Number of people trained in drought preparedness Water conservation measures implemented	Decreased drought-related water scarcity Improved drought resilience among communities	5 no. water harvesting structures constructed 180 people trained in drought preparedness Water conservation measures adoption rate	Increase in drought-related water scarcity Increase in drought resilience among communities Reduction in the number of drought-related livestock deaths
SECTORS	GOVERNANCE						
MAIN OBJECTIVE	PROMOTE INCLUSIVE GOVERNANCE AT THE LOCAL LEVEL BY 2035

SPATIAL DEVELOPMENT FRAMEWORK

Introduction

The Spatial Development Framework (SDF) guides the district's growth by aligning future development with its vision, mission, and goals. It optimizes land use, maximizes infrastructure, protects the environment, and enhances transportation, settlements, and cultural sites, ensuring sustainable and organized development.

Baseline situation/trends

Chama District has seen substantial changes in recent decades, largely driven by population growth, which has increased demand for housing and led to a gradual improvement in building quality. However, many structures remain substandard, which heightens vulnerability to floods, particularly in areas like Vilimukulu, Lunzi, Mapamba, Mwalala, Kalinkhu, and Mphalausenga wards.

Water and sanitation have progressed gradually, with population growth straining both urban and rural water supplies. Partnerships, especially in Chama South, have been established to enhance water infrastructure, with support from organizations like World Vision, UNICEF, and TRALARD. Nevertheless, sanitation remains a critical issue, with only Muchinga Ward declared open-defecation-free out of 24 wards.

Electricity, primarily supplied by ZESCO, recently improved with the district's connection to the national grid in late 2023, leading to infrastructure expansion. Projects to extend the power distribution to Chikwa, Tembwe, and Kambombo chiefdoms are underway, alongside a solar project in Lundu. Still, only Kamphemba Ward has partial access to the national grid.

Forestry resources face pressure due to settlement encroachment in the Lundazi National Forest. Efforts by the government and partners to promote sustainable management through community forest areas (CFMAs) are promising, though challenges remain. A pressing issue is balancing environmental protection with the demand for resources, such as the government's goal to provide desks for students by December 2024, which intensifies forest resource use.

Mining remains largely undeveloped, limited to exploration and small-scale activities, mainly in the Lundazi forest, adding complexity to conservation efforts. Tourism continues to be economically important, with community resource boards (CRBs) funding projects in Lundu, Kambombo, Tembwe, Chikwa, and Chifunda, although human-wildlife conflicts, particularly during droughts, have increased in Chama South.

Agriculture has diversified, moving beyond traditional cotton and rice to include maize, soybeans, and other crops. Livestock farming, predominantly in the North constituency where wildlife conflicts are minimal, and fish farming are also developing, though they need further infrastructure and resources.

Population growth has heightened demand for social services, including health, education, and social welfare. The Constituency Development Fund (CDF) of 2021 has aided in road improvements and educational support, including secondary school funding and skills training. Social welfare has received boosts in grants and loans under the new CDF, improving literacy but also leading to an increase in educated youth seeking employment outside the district.

Commerce and trade have expanded, aided by the CDF, leading to more cooperatives and economic activities such as small-scale milling, poultry, and livestock trading. However, growth is limited by a lack of commercial banking services, with only NATSAVE bank and one official market serving the district.

The 'Do-Nothing' Outcomes

Long-term development requires substantial investment, often at a high cost. To understand if such an investment is essential, here is an analysis of potential outcomes if current conditions persist.

Firstly, population growth in Chama district is inevitable and central to future developments. With over 70% of the population relying on subsistence farming, agriculture is both a critical economic driver and a significant source of environmental stress. Population growth will increase the demand for food, leading to a need for more agricultural land and mounting pressure on protected areas. If left unchecked, this expansion threatens sectors like forestry and energy, impacting multiple areas.

Population growth also raises the demand for social services. Housing demand is already high, and without targeted development, the housing shortage will worsen, bringing additional challenges. Rising demand may attract more real estate developers but also lead to social and spatial conflicts, including land use clashes and boundary encroachments. This will further complicate development across sectors such as water, sanitation, and health.

Similarly, population increases will stress water and sanitation infrastructure. Without proactive solutions, residents might turn to harmful practices, jeopardizing the district's goal of Open Defecation Free (ODF) status. This shift could heighten exposure to waterborne diseases, especially during rainy seasons or in the event of flooding.

Increased population will also strain health services and infrastructure, which are already stretched thin. Accessibility issues, especially due to limited transport infrastructure, will intensify. The rising demand on healthcare will further stress the district's social welfare sector.

A vulnerable, unhealthy society is a poor one, especially since 57% of Chama's population is aged 0 to 19 and reliant on a relatively small workforce. Mortality among the working-age population increases dependency and may push many young people towards negative coping mechanisms for survival.

Alternative spatial development scenarios

In the following sections, Chama district highlights scenarios deemed to be able to address the core issues being faced within the district.

First scenario

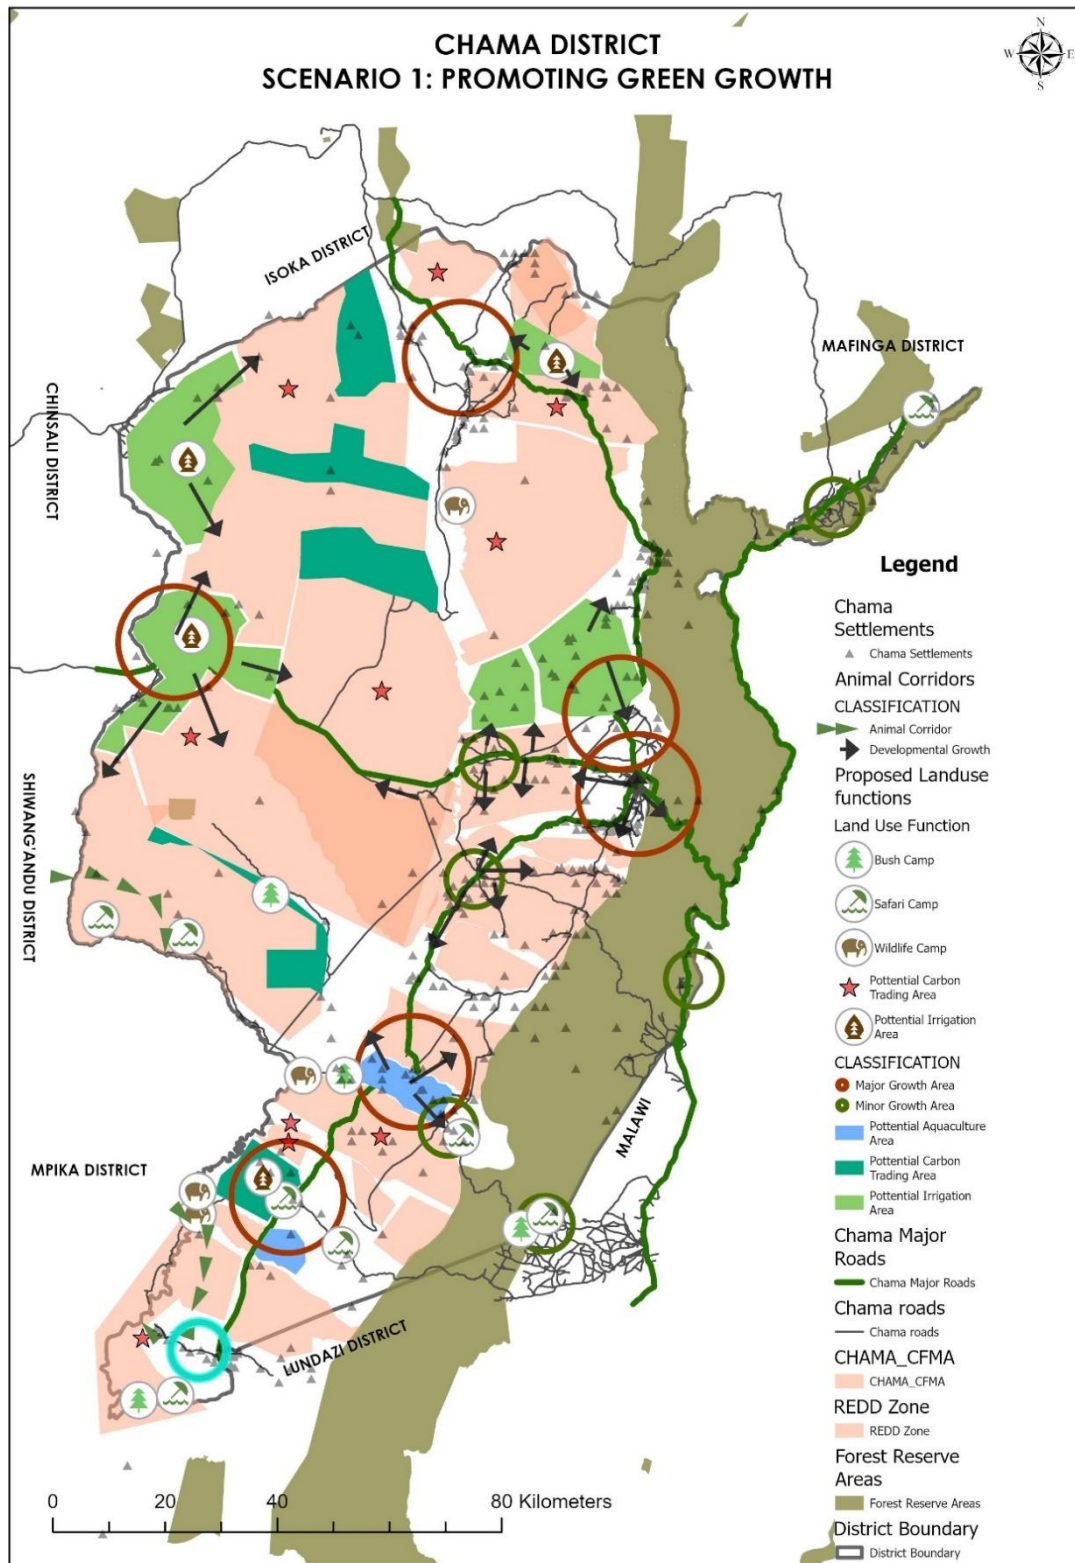

“A socio-economically sound and sustainable district by 2045”

The first scenario depicted by the district focuses on improving the lives of the residents through promoting already existing economic activities such as agriculture and tourism as well as boosting recreational and sporting activities, sustainable natural resource management, and mining.

Rationale Of Scenario 1

Through this scenario, the district will be able to maximize the received benefits of its natural resources and sustain them through alternative economic activities that encourage environmental conservation; activities such as community forest management areas, carbon harvesting, and beekeeping among others.

Map 20 illustrates scenario 1

Map 20: Map of Scenario 1
Source: Chama Town Council (2024)

Second scenario

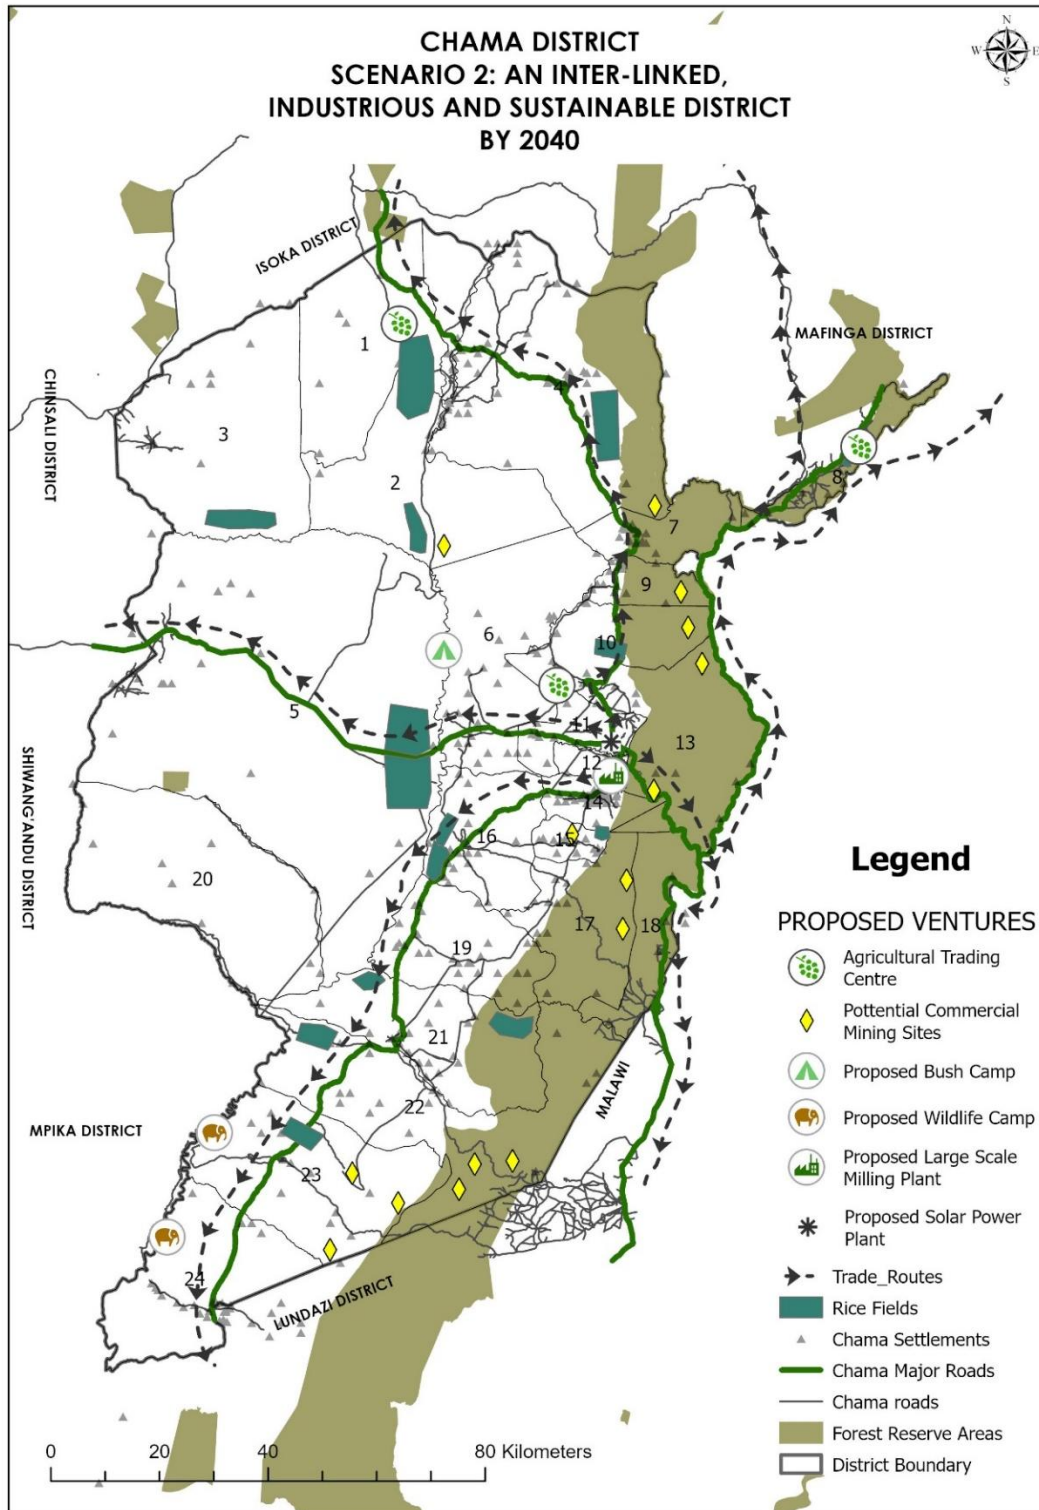

“An inter-linked, industrious and sustainable district by 2045”

In this scenario, the district is looking at taking advantage of its geographical location. Chama is surrounded by five (05) districts and shares a border with Malawi on the eastern side. Subsequently, the district is a good prospect for the generation of electrical power through solar power plants.

Rationale Of Scenario 2

By developing the road network, the district can promote economic regional trade with its neighbors. This in turn will boost industrial activity, hospitality for transit visitors, and expand the current market for tourism.

Map 21 illustrates scenario 2

Map 21: Map of Scenario 2
Source: Chama Town Council (2024)

Third scenario

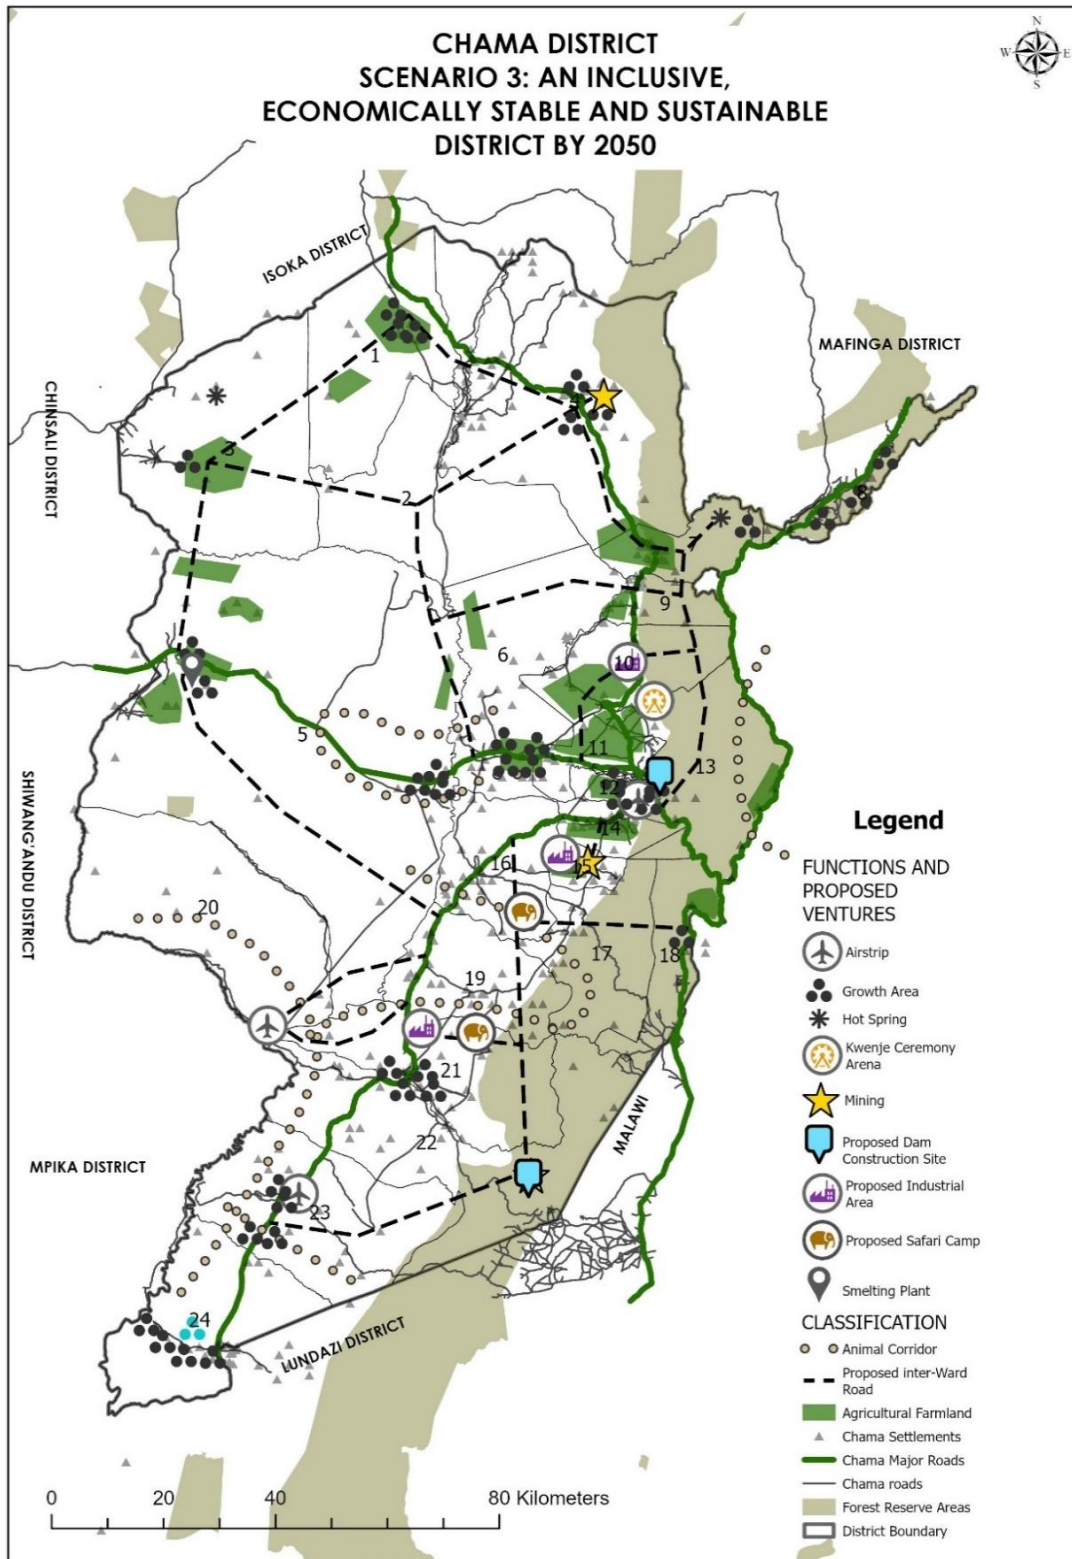

“An inclusive, economically stable and sustainable District by 2045”

Like the two scenarios listed above, the third scenario also looks at promoting the sustainable use of natural resources. However, this scenario takes a step further by focusing on enhancing the use of water resources.

Rationale Of Scenario 3

Through the development of water harvesting infrastructure in key strategic positions, the district will boost a number of economic activities within these areas. Establishing dams and weirs will help transition farmers to improved irrigation cultivation practices, protect the local scenery for tourism, encourage industrialization, and mining. This will be topped off by developing an internal road network within the district linking these locations together.

Map 22 illustrates scenario 3

Map 22: Map of Scenario 3
Source: Chama Town Council (2024)

Chosen spatial development scenario

Table 36: Advantages of the scenarios

SCENARIO 1	SCENARIO 2	SCENARIO 3
✓ Promotion of rice cultivation in areas like Chibale, Mazonde, Chisunga, Manthepa, Mphyanakunda, Katangalika, Kambombo, Tembwe, Buli, Lunzi, and Chifunda among others) ✓ Increase recreational and sporting activities in the district ✓ Preserve and promote cultural heritage through the protection of heritage sites ✓ Promote beekeeping	✓ Attract more attention to the development of the road infrastructure and overall network in the district and the region ✓ Further development of the regional and international market ✓ Enhance the development of hospitality facilities in the district (Hotels, lodges, truck parking, etc.). ✓ Promote alternative electricity generation (Solar power plants)	✓ Promote the development of water harvesting infrastructure in the district (Dams and weirs) ✓ Promote alternative forms of agricultural practices (Drip irrigation) ✓ Enhance scenic beauty for tourist facilities (Water bodies combined with tourism facilities such as hotels) ✓ Development of an internal interlinking road network of the wards in the district

✓ Increase the market for carbon trading ✓ Develop a foundation for commercial mushroom growing ✓ Promote the growing of wild fruits ✓ Promote mining	✓ Develop a platform for industrial economic growth in the district (Value addition in the value chain. Production of finished and packaged goods) ✓ Promote mining	✓ Encourage the expansion of livestock production ✓ Strengthen corporation and collaboration among traditional leadership in the district
--	--	--

Table 37: Disadvantages of the scenarios

SCENARIO 1	SCENARIO 2	SCENARIO 3
✓ The increase in demand for agricultural produce such as rice threatens the extent of local forest areas ✓ Possible increase in Human-Wildlife coexistence challenges due to increased	✓ Loss of local forests due to bush clearing for road networks ✓ The road network will subsequently attract new informal settlements	✓ Potential threat for bigger impacts from floods in an event of infrastructural malfunction ✓ Demand for colossal funding for the maintenance of water harvesting infrastructure

cultivation and crop production ✓ Potential threat to the ecosystem as a result of mining ✓ Increases social issues such as HIV/AIDS, early marriages, and school dropouts among others choosing to pursue economic activities over education	✓ The threat of an externally dominated market (Increased accessibility for briefcase buyers) ✓ Increased pollution as a result of increased industrial activity ✓ Issues of immigration/immigrants due to an increase in foreign trade ✓ Increases social issues such as HIV/AIDS, early marriages, and school dropouts among others choosing to pursue economic activities over education ✓ Threat of environmental degradation as a result of mining activities	✓ Loss of land by the local communities as a result of the scale of water harvesting-related projects ✓ Potential threat of increased poaching activity especially in areas encouraging wildlife existence as a result of increased artificial water bodies. ✓ Potential threat of disease outbreak among livestock as a result of population increase ✓ Potential threat of boundary disputes between chiefdoms
---	--	---

Following an in-depth consideration, the chosen spatial development scenario is a hybrid of certain aspects from the combined three scenarios (Table 36 and Table 37). Aspects that gave more promise include;

SCENARIO ONE (1)

- ✓ Promote the protection of heritage sites
- ✓ Promote conservation of natural resources

SCENARIO TWO (2)

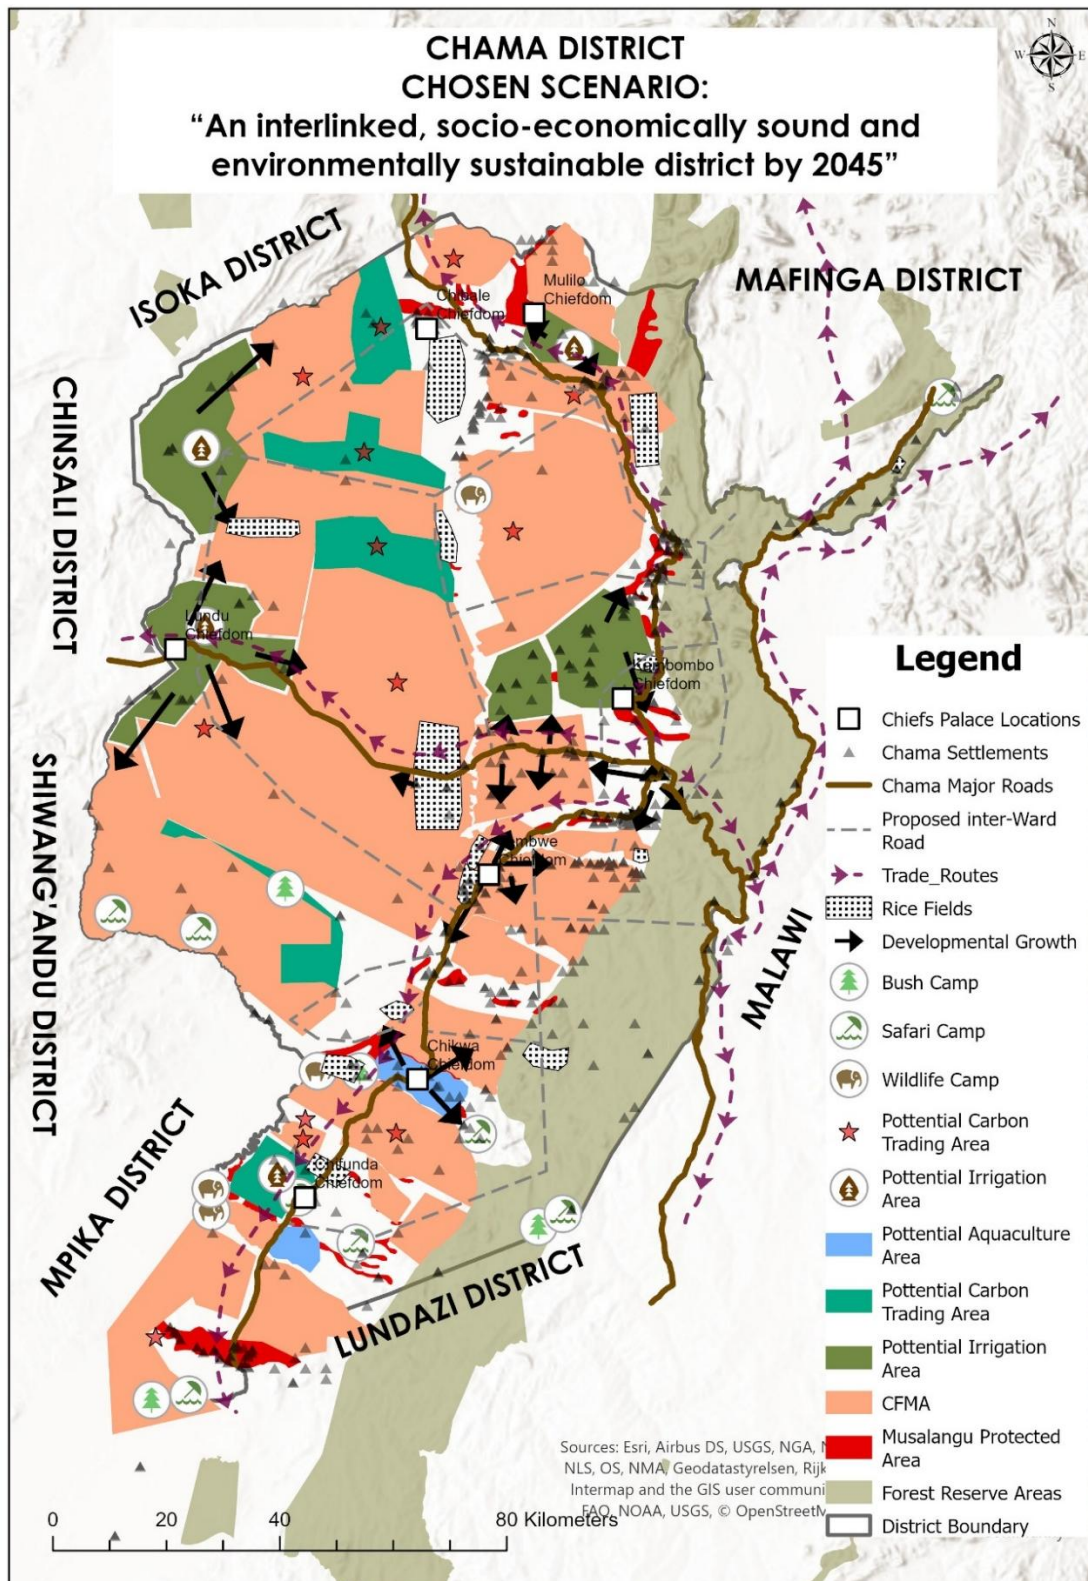

- ✓ Development of road infrastructure
- ✓ Upscale rice production and enhance value addition
- ✓ Development of the regional market
- ✓ Promote the development of hospitality facilities (Hotels, lodges, truck parking, etc.)
- ✓ Promote alternative electricity generation (Solar Power Plant)
- ✓ Develop a platform for industrial economic growth in the district (Value addition by producing finished products)

SCENARIO THREE (3)

- ✓ Promote the development of water harvesting infrastructure
- ✓ Promote collaboration among traditional leadership

The aspects mentioned above are deemed to be the most effective and efficient way to guide the district to its desired outcome; ***“An interlinked, socio-economically sound and environmentally sustainable district by 2045”***

Map 23 illustrates the chosen scenario

LAND USE PLANNING OBJECTIVES AND STRATEGIES

Land use planning objectives and strategies for improving, maintaining, or protecting the environmental aspects of development

As a matter of great importance, the environmental aspect of development remains crucial as it determines the outcome of the overall growth in the district. Under this section, the district zeros on what planning objectives and strategies can be used to protect the environment.

To start with, the district considers several factors that cause an impact on the environment. The parameters chosen involve which sectors contribute the most to land clearance and environmental pollution (Land, water, air, and noise pollution. Thermal, light, and radioactive pollution have not been considered due to limited occurrence in the district).

Table 38: Identification of the Areas to Be Improved. Maintained or Protected

IMPROVED	MAINTAINED	PROTECTED
Catchment areas along river banks to mitigate erosion (Tree replanting),	- Open spaces and water capture catchment areas - Water aquifers	- National forest - Local forests - Animal corridors - Community Forest management areas - REDD Zones - Water aquifers

Statement as to the type of development to be permitted within the identified area

Areas Of Improvement

Based on the identified characteristics of areas to be improved, the recommended developments must uphold the objective of improving the area; As such, activities in such areas will include the development of Community Forest Management areas (CFMA), and tree nurseries among others. Exceptions will be made when proposed developments supersede the stated function and bare minimum repercussions to the general well-being of the environment.

Areas To Be Maintained

Developments in such areas will be routine-based and will involve the restoration of public spaces, facilities, and amenities. Examples include rehabilitation.

Areas To Be Protected

Sensitive areas such as those mentioned above call for significant attention. As such, developments are restricted in such areas. However, there are some exceptions in some instances; Permitted developments in sensitive zones include the development of public infrastructure such as roads, communication towers, sewer ponds and other public amenity facilities.

Identification of activities required for implementation

Areas of improvement – Establishment of CFMAs, botanic nurseries, public sensitization, environmental campaigns, and other related activities.

Areas to be maintained – Rehabilitation works and refurbishments.

Areas to be protected – Road formation, stakeholder engagement, sensitization, environmental protection campaigns, and relocation in some instances.

Land use planning objectives and strategies for improving, maintaining or protecting the environmental, social and economic aspects of development

Identification of the areas

Regarding the social-economic aspects of development in the Chama district, the areas identified include;

- ✓ Settlement areas,
- ✓ Public utility catchment areas (Water aquifers, power stations, sanitation facilities or treatment plants, power buffer zones, etc.)
- ✓ Specialized land use zones (Residential, commercial, industrial, mining, forest concession areas, etc.)

Statement As to The Type of Development to Be Permitted

About the social economic state of the district, developments will be implemented in accordance to the respective prescribed land use functions and zones.

Identification of planning activities required to implement the policy

Activities undertaken to implement development will include but not be limited to;

- ✓ Public sensitization,
- ✓ Development control,
- ✓ Development enforcement,
- ✓ Stakeholder engagement,

Specific protection zones, areas of environmental sensitivity or cultural and historical importance or areas of importance for disaster management purposes

Identification of the areas

The district has identified and noted both areas of cultural and historical importance as well as areas sited for disaster protection. This section outlines these areas based on the various sectors in the district.

Table 39: Areas of cultural, historical, and protected zones

SECTOR	SIGNIFICANT PROTECTION ZONES
HOUSING	Areas zoned for residential land use. This also include township boundary extension areas.
WATER AND SANITATION	Water aquifers and reservoirs, water bodies, water harvesting infrastructure sites, dumpsites
ENERGY	Power plants, buffer zones, and way leaves.
ENVIRONMENT AND FORESTRY	National forests, community forest management areas, community resource board areas, river buffer zones, and Carbon farming forests.
MINING	Mining sites
TOURISM	Animal corridors, heritage sites, protected areas, and national parks
AGRICULTURE	Farm lands, farm blocks and farm schemes,
LIVESTOCK AND FISHERIES	Grazing pasture lands, hatcheries and fish ponds
HEALTH	Health facilities, cemeteries,
TRANSPORT AND COMMUNICATION	Air strips, road surfaces, road reserves, crossing points, bridges, bus stations, communication towers

EDUCATION	School premises, production units, play parks, staff housing blocks
SOCIAL PROTECTION	Judicial institutions, adult homes, correctional facilities, border posts,
COMMERCE AND TRADE	Markets, Abattoirs, and storage sheds

Statement as to the type of development to be permitted

Developments within these areas will be determined by the respective legal prescriptions based on the respective land-use, area zoning, and legal precedence or Acts.

Identification of activities required for implementation

In terms of implementation of developments, a number of activities will be undertaken at different intervals and stages which will include but not be limited to;

- ✓ Community engagements and sensitization campaigns,
- ✓ Stakeholder engagements,
- ✓ Land Use planning,
- ✓ Infrastructure development,

Protection of national and regional interests, policies and guidelines

Game management area

As a creation of the Zambia Wildlife Act, of 2015, Chama district is a Game Management Area and therefore an area of national interest. Furthermore, the establishment of the GMA is for the sustainable utilization of wildlife.

National forest

Just as is the case of the GMA, a national forest is a creation of the Forestry Act, 2015. While the case of the GMA is meant for the preservation of wildlife, the Forest Act addresses the protection and preservation of forest areas in the country.

Identification of the areas

As stated earlier, Chama district is located in a game management area and part of its territory is gazetted as a national forest namely Lundazi National Forest. The Lundazi National Forest stretches over most of the eastern part of the district covering a significant area of the Chama South constituency and part of the eastern territory of the Chama North constituency.

Statement as to the type of development to be permitted

With reference to the Zambia Wildlife Act 2015, settlements, agriculture, and game ranching are permitted developments within the game management area. However, activities such as mining are only permitted provided the prescribed parameters under the Act are observed; These include environmental protection measures, consent from traditional leadership depending on the land status, and any other legal prescription that applies within the area in question.

Identification of activities required for implementation

Similar to developments in the previous sections, activities within the GMA and National Forest are equally subject to;

- ✓ Community engagements and sensitization campaigns,
- ✓ Stakeholder engagements,
- ✓ Land Use planning,
- ✓ Infrastructure development,

Informal Settlements

As stated earlier in the initial chapters, informal settlements are unplanned settlements as described under the Urban and Regional Planning Act, 2015. 92% of Chama district is unplanned with only 8% planned territory in Kamphemba ward.

Identification of the informal settlements to be upgraded.

Chama District, with 92% of its land unplanned, is prioritizing the Mtayachalo settlement and planning agreements in two chiefdoms for development initiatives.

Mtayachalo Area: Located in Kamphemba Ward with 334 households, Mtayachalo is set for an upgrade to improve public services, including land use planning, electrification, water, sanitation, and waste management.

Planning Agreements with Chiefs: In line with the Urban and Regional Act of 2015, the district aims to establish formal agreements with Chief Kambombo in the north and Chief Chikwa in the south to guide development.

Kaozi Area (Kambombo Chiefdom): Recognized for agricultural growth, Kaozi is developing an agricultural camp, a livestock dip tank (75% complete), and has proposals for a health post, primary school, and boarding school, plus 10 hectares for grazing.

Chikwa Chiefdom: Known for tourism potential, Chikwa features guesthouses, nine camps, and a safari camp. It's a primary tourist destination and one of five proposed sites for a community bush camp.

These efforts aim to drive structured growth, support local economies, and enhance service provision in the district.

General description of improvement inputs or other management responses required.

Implementing proposed settlement upgrades and planning agreements will foster growth in various district areas. These agreements necessitate the creation of Local Area Plans (LAPs), developed with the Eastern Provincial Planning Authority and other stakeholders per the Urban and Regional Planning (URP) Act. Similar to the Integrated Development Plan (IDP), LAPs will address specific issues within targeted areas, including environmental assessments, socio-economic surveys, and community engagement. Key management steps include formally designating areas for these planning agreements as required by Section 25, subsection d, l of the URP Act.

General statement about the appropriate building and land use controls to be applied in those areas.

All land uses and functions will be determined in accordance to the relevant laws and statutory regulations. Below is a tabulation of the policy documents to be consulted.

Table 40: Various planning aspects with respective policy documents

PLANNING ASPECT	POLICY DOCUMENT
LAND USE PLANNING	1. URBAN AND REGIONAL PLANNING ACT, 2015 2. PUBLIC HEALTH ACT
BUILDING STANDARDS	1. URBAN AND REGIONAL PLANNING ACT, 2015 2. PUBLIC HEALTH ACT
SPECIAL USE ZONING	1. PUBLIC HEALTH ACT 2. MINES AND MINERALS ACT

Other documents relevant to building and land use controls that are not necessarily Acts will be consulted. Instances like the Doxiadis Lusaka City Development Plan will help in the planning process.

IDENTIFICATION OF ACTIVITIES REQUIRED FOR IMPLEMENTATION.

The implementation of area upgrading involves a number of activities some of which are iterative in nature. Activities include;

- ✓ Community engagements and sensitization campaigns,
- ✓ Stakeholder engagements,
- ✓ Land Use planning,
- ✓ Approval of Land Use local area plans,
- ✓ Numbering and Survey

Areas under the jurisdiction of traditional authorities

Implementing proposed settlement upgrades and planning agreements will foster growth in various district areas. These agreements necessitate the creation of Local Area Plans (LAPs), developed with the Eastern Provincial Planning Authority and other stakeholders per the Urban and Regional Planning (URP) Act. Similar to the Integrated Development Plan (IDP), LAPs will address specific issues within targeted areas, including environmental assessments, socio-economic surveys, and community engagement. Key management steps include formally designating areas for these planning agreements as required by Section 25, subsection d, I of the URP Act.

PART FOUR - IMPLEMENTATION PROGRAMME

CAPITAL INVESTMENT PROGRAMME

The next section presents Chama district's financial plan, detailing investments in social services, infrastructure, and other essential capital projects to advance the district's development goals and strategies. This capital investment plan is organized by sector and is based on the priorities outlined in the Eighth National Development Plan (8NDP).

Table 41: Specific objectives, strategies, programmes and suggested projects over the next five years

SDA 1	ECONOMIC TRANSFORMATION AND JOB CREATION								
SECTORS	TOURISM, AGRICULTURE, MINING, AND MANUFACTURING								
MAIN OBJECTIVE	DIVERSIFICATION OF THE LOCAL ECONOMY THROUGH TOURISM PROMOTION, AGRICULTURAL DIVERSIFICATION, AND VALUE ADDITION								
SPECIFIC OBJECTIVES	STRATEGIES	PROGRAMMES	PROJECTS	TARGET (K)					RESPONSIBLE AGENCY
				2025	2026	2027	2028	2029	

To promote local tourism	Develop the outfitter road infrastructure	Infrastructure development	Rehabilitation of 10 kilometers and construction of 10 kilometers of outfitter roads	1,200,000 2km Chikwa - rehabilitation	1,200,000 2km Munda - rehabilitation	1,200,000 2km Chifunda Rehabilitation	1,200,000 2km Muchinga Rehabilitation	1,200,000 2km Tembwe Construction	DNPW, CTC
				1,400,000 2km Vwaza - construction	1,400,000 2km Munda - construction	1,400,000 2km Manga Construction	1,400,000 2km Chipalala construction	1,400,000 2km Chipalala Construction	
To promote local tourism	Developing hospitality and tourism infrastructure	Infrastructure development	Construction of 3 bush camps Kambombo (2025), Tembwe (2026), and Chikwa (2027), 1	1,700,000 1 Kambombo	1,700,000 1 Tembwe	1,700,000 1 Chikwa bush camp	3,500,000 1 Chifunda 5-	2,000,000 1 Lundu Lodge	DNPW, CTC, Ministry of Tourism

			5-star hotel in Chifunda (2028), and 1 lodge in Lundu Chiefdom (2029).	bush camp	bush camp		star hotel		
To enforce wildlife management in the district	Restocking of wildlife	Wildlife Management	Restocking of large mammals - Elephants - 25/per year Buffalos - 100/per year	3,000,000 25 Nyika 4,000,000 100 Chifunda	3,000,000 25 Nyika 4,000,000 100 Chifunda	3,000,000 25 Nyika 4,000,000 100 Chimpamba	3,000,000 25 Nyika 4,000,000 100 Chasato	3,000,000 25 Nyika 4,000,000 100 Manga	DNPW, Ministry of Tourism
To promote crop diversification	Promoting agricultural crop diversification	Agribusiness development	Promote crop diversification of soya beans, groundnuts, and rice by establishing a food fare	60,000 1 Kwenje venue	61,000 1 Kwenje venue	66,000 1 Kwenje venue	70,000 1 Kwenje venue	78,000 1 Kwenje venue	Agriculture Dept, District admin, CTC, COMACO

			center/venue in the district.						
To improve knowledge of food processing and nutrition	Facilitate food processing and nutrition training	Agribusiness development	Conduct Training in food processing and nutrition in all 31 camps	400,000 4 Quarterly	450,000 4 Quarterly	480,000 4 Quarterly	500,000 4 Quarterly	510,000 4 Quarterly	Agriculture Dept, District admin, COMACO
To improve disaster resilience	Establishing early warning systems equipment in all 31 camps	Early warning and surveillance systems	Strengthen existing early warning systems by installing early warning equipment in all 31 camps in the district (Rain gauges K 5,000 each and Weather radios K 1,000)	42,000 7 Buli, Cham a central , Chibal e, Chifunda, Chigoma, Chikwaka,	36,000 6 Dungulungu, Kalovya, Kambombo, Kanyele, Katan galika, Lundu	36,000 6 Mang a, Manthepa, Mapamba, Mulilo, Mundalang, Ng'anj o Bazimu	36,000 6 Nthonko, Sitwe, Tembewe, Zoole, Chimpamba, Chitukula,	36,000 6 Chasato, Kamfutu, Kaozi, Kasela, Mungwalala, and Pondo	Agriculture Dept

				Chilub anam a,					
To promote climate- smart agriculture	Establish farmer field demonstratio n centres	Irrigation development	Promote Climate Smart Agriculture through establishing farmer field demonstration centres (CSA) in all 31 agricultural camps of Chama district by 2035.	700,00 0 7 Buli, Cham a central , Chibal e, Chifun da, Chigo ma, Chikw a, Chilub anam a,	600,00 0 6 Dungul ungu, Kalovy a, Kamb ombo, Kanyel ele, Katan galika, Lundu	606,00 0 6 Mang a, Manth epa, Mapa mba, Mulilo, Mund alang a, Ng'anj o Bazimu	612,00 0 6 Nthonk o, Sitwe, Temb we, Zoole, Chimp amba, Chituk ula,	624,00 0 6 Chasa to, Kamfut u, Kaozi, Kasela, Mung walala , and Pondo	Agriculture Dept

To increase access to the market and storage for crop harvests	Establish market centers and construct crop storage depots	Agribusiness development	Enhance market linkages by establishing 8 market centers in the district and constructing 7 crop storage depots	4,000,000 4 Market centers	4,400,000 2,200,000 2 storage depots	4,000,000 2 storage depots	4,400,000 2 storage depots	2,300,000 1 storage depot	Agricultural Dept, MoA
To enhance rice production and develop the rice processing value chain	Establish an agro-processing industry	Agribusiness development	Promote agricultural technologies and value chains for rice production by establishing an Agro-processing industry		2,750,000 1 Agro-processing plant/industry				Agricultural Dept, MoA

To enhance livestock management in the district	Establishing livestock centres	Livestock development	Construct 4 livestock centres in Kalovya, Kanyelee, Chasato, and Chizimba		4,000,000 1 Kalovya	4,400,000 1 Kanyelee	4,600,000 1 Chasato	5,000,000 1 Chizimba	Dept of Fisheries and Livestock, MoFL
To enhance livestock trade in the district	Establishing livestock market centres	Agribusiness development	Construct 4 livestock market centres in Chifunda, Mapamba, Chikwa, and Tembwe		3,000,000 1 Chifunda	3,200,000 1 Mapamba	3,300,000 1 Chikwa	3,400,000 1 Tembwe	Dept of Fisheries and Livestock, MoFL
To promote hygiene in livestock product management	Constructing slaughter facilities	Agribusiness development	Construct 2 livestock slaughter facilities (Less than 500 heads/day)		6,500,000 1 Kampembwa	7,000,000 1 Kaozi			Dept of Fisheries and Livestock, MoFL
To increase pasture for livestock	Plant pasture for livestock grazing	Livestock development	Plant 40ha of pasture (10ha Farmer's training		6,000,000 40ha				Dept of Fisheries and Livestock,

			centre (FTC), 10ha Chasato, 10ha Kaozi, and 10ha Kanyebele) 1,500,000 per 10Ha		FTC-10, Chasato-10, Kaozi-10, and Kanyebele-10				Forestry Dept, Agricultural Dept
To improve livestock health	Construction of dip tanks	Livestock development	Construct 5 dip tanks 15 meters long, 7 meters wide, and 4 meters deep (FTC, Kanyebele, Chasato, Kalovya, and Kaozi)		2,100,000 1 FTC	2,100,000 1 Kanyebele	4,200,000 2 Chasato And Kalovya	2,300,000 1 Kaozi	Dept of Fisheries and Livestock, MoFL
To promote traditional and non-traditional minerals	Establish Public Private Partnerships encouraging small-scale artisanal	Artisanal and small-scale mining development	PPPs for artisanal small-scale mining established in all 7 Chiefdoms (Kambombo, Lundu, Chibale,						CTC, Government, NGOs

	mining development		Mulilo, Chikwa, Tembwe, and Chifunda)						
To promote livestock production in the district	Fence off human settlements to reduce human-wildlife conflict cases	Livestock development	Settlement fencing in areas prone to Human-Wildlife conflict (Chifunda, and Chikwa for a start)	Fence off areas in Chifunda and Chikwa Chiefdoms	Fence off areas in Tembwe Chiefdom

CHAMA TOWN COUNCIL'S FINANCIAL PLAN

Purpose

The aim of this Long-Term Financial Plan is to raise awareness about potential financial challenges and opportunities that the Council may encounter, guiding the Institution's financial and operational decision-makers in preparing for these possibilities. This five-year financial plan is part of a broader initiative by the Council to strengthen its long-term financial planning and management strategies.

Scope

The Council's Financial Plan for Fiscal Years 2025 to 2035 outlines the revenues and expenditures for all Council funds, including the General Fund and special funds, over five years.

Description of Development Process

Furthermore, this section of the implementation program describes the policies and financial abilities to manage the investment needs associated with its spatial development and built environment through the costing and financing of all strategies formulated to ensure that the objectives and strategies of the IDP are well implemented. A capital investment plan would classify specific public projects as well as a general schedule. The capital Investment Programme is prepared for five years (2022 to 2026) only and is associated with the Medium-Term Expenditure Framework, and is directly related to the priorities, objectives and strategies of the IDP.

Revenue Collection Efficiency of the CHAMA Town Council

The section below provides details of CHAMA Town Council revenue collection efficiency.

Assessment of Current and Potential Revenue Streams

CHAMA Town Council revenue is low due to low levels of compliancy when it comes to payments of rates and levies by business owners in the district. Sources of revenue includes Property Rates, Business Levy, and Grain Levy among many others.

Own Sources of Revenue (OSR)

A major component of the CHAMA Town Council's revenue streams includes:

- 1) Lease and sale of Council land;
- 2) Property rates and taxes;
- 3) Business and Personal Levies;

External Sources of Revenues for Implementation

The implementation of CHAMA IDP will mainly depend on funding from the Government, Donor Agencies, and Private Investors. The council receives Constituency Development Funds (CDF) for community driven projects, the Local Government Equalization Fund (LGEF), Grants-in-lieu of rates for implementation of Capital Projects and Developmental Programmes.

Main Factors affecting Revenue Collection and Management

Main factors affecting revenue collection in the district is lack of transport, inadequate staff and lack of awareness on the importance of residents and business owners to pay rates and taxes.

Programmes for the Preparation of Local Area Plans

CHAMA Town Council shall develop Local Area Plans for the IDP from 2022 onwards as outlined below:

Phase 1: Informal Settlements upgrading (2025 – 2029)

Phase 2: New Developments (2025 – 2030)

Phase 3: Urban Regeneration (2031 – 2037)

MONITORING AND EVALUATION PLAN

Table 46: Monitoring and evaluation plan

SECTORS	TOURISM, AGRICULTURE AND MANUFACTURING									
MAIN OBJECTIVE	DIVERSIFICATION OF THE LOCAL ECONOMY THROUGH TOURISM PROMOTION, AGRICULTURAL DIVERSIFICATION, AND VALUE ADDITION									
STRATEGIES	PROGRAMMES	PROJECTS	TARGET					OUTPUT INDICATOR	SOURCE OF DATA	FREQUENCY
			2025	2026	2027	2028	2029			
Develop the outfitter road infrastructure	Infrastructure development	Rehabilitation of 10 kilometers and construction of 10 kilometers of outfitter roads	1,200,000 2km Chikwa - rehabilitation	1,200,000 2km Mundalanga - rehabilitation	1,200,000 2km Chifunda Rehabilitation	1,200,000 2km Muchinga Rehabilitation	1,200,000 2km Tembwe Construction	No. of kilometers of outfitter roads rehabilitated and 10 kilometers of outfitter roads constructed	Progress reports	Monthly
			1,400,000 2km Vwaza - construction	1,400,000 2km Mundalanga - construction	1,400,000 2km Manga Construction	1,400,000 2km Chipala construction	1,400,000 2km Chipala Construction			
Developing hospitality and tourism infrastructure	Infrastructure development	Construction of 3 bush camps Kambombo (2025), Tembwe (2026), and Chikwa (2027), 1 5-star hotel in Chifunda (2028), and 1 lodge in Lundu Chiefdom (2029).	1,700,000 1 Kambombo bush camp	1,700,000 1 Tembwe bush camp	1,700,000 1 Chikwa bush camp	3,500,000 1 Chifunda 5-star hotel	2,000,000 1 Lundu Lodge	No. of bush camps, 5-star hotels, and lodges constructed	Progress reports	Monthly
Restocking of wildlife	Wildlife Management	Restocking of large mammals Elephants - 25/per year	3,000,000 25 Nyika 4,000,000 100	3,000,000 25 Nyika 4,000,000 100	3,000,000 25 Nyika 4,000,000 100	3,000,000 25 Nyika 4,000,000 100	3,000,000 25 Nyika 4,000,000 100	No. of elephants and Buffaloes restocked	Game viewing, Transfer certificates, Records of	

		Buffalos - 100/per year	Chifunda	Chifunda	Chimphamba	Chasato	Manga		acknowledgment of receipt, and Inventory reports,	
Promoting agricultural crop diversification	Agribusiness development	Promote crop diversification of soya beans, groundnuts, and rice by establishing a food fare center/venue in the district.	60,000 1 Kwenje venue	61,000 1 Kwenje venue	66,000 1 Kwenje venue	70,000 1 Kwenje venue	78,000 1 Kwenje venue	No. of food fare centres established	Documentations of official recognition, certificate of completion, Attendance reports	
Facilitate food processing and nutrition training	Agribusiness development	Conduct Training in food processing and nutrition in all 31 camps	400,000 4 Quarterly	450,000 4 Quarterly	480,000 4 Quarterly	500,000 4 Quarterly	510,000 4 Quarterly	No. of farmers camps trained in food processing and nutrition	Crop storage inventory reports, Activity reports	
Establishing early warning systems equipment in all 31 camps	Early warning and surveillance systems	Strengthen existing early warning systems by installing early warning equipment in all 31 camps in the district (Rain gauges K 5,000 each and Weather radios K 1,000)	42,000 7 Buli, Chama central, Chibale, Chifunda, Chigoma, Chikwa, Chilubanam a,	36,000 6 Dungulungu, Kalovya, Kambombo, Kanyebele, Katangalika, Lundu	36,000 6 Manga, Manthepa, Mapamba, Mulilo, Mundalanga, Ng'anjo Bazimu	36,000 6 Nthonko, Sitwe, Tembwe, Zoole, Chimpamba, Chitukula,	36,000 6 Chasato, Kamfutu, Kaozi, Kasela, Mungwalala, and Pondo	No. of camps with established early warning systems	Early warning reports	
Establish farmer field demonstration centres	Irrigation development	Promote Climate Smart Agriculture through establishing farmer field demonstration centres (CSA) in	700,000 7 Buli, Chama central, Chibale, Chifunda, Chigoma,	600,000 6 Dungulungu, Kalovya, Kambombo, Kanyebele,	606,000 6 Manga, Manthepa, Mapamba, Mulilo, Mundalanga,	612,000 6 Nthonko, Sitwe, Tembwe, Zoole,	624,000 6 Chasato, Kamfutu, Kaozi, Kasela, Mungwalala, and Pondo	No. of field demonstration centers established in 31 camps	Field demonstration reports from all trained camps	

		all 31 agricultural camps of Chama district by 2035.	Chikwa, Chilubanam a,	Katangalika, Lundu	Ng'anjo Bazimu	Chimpamba, Chitukula,				
Establish market centers and construct crop storage depots	Agribusiness development	Enhance market linkages by establishing 8 market centers in the district and constructing 7 crop storage depots	4,000,000 4 Market centers	4,400,000 4 Market centers 2,200,000 2 storage depots	4,000,000 2 storage depots	4,400,000 2 storage depots	2,300,000 1 storage depot	No. of market centres established and crop storage depots constructed	Market centre revenue reports, Crop storage inventory reports	
Establish an agro-processing industry	Agribusiness development	Promote agricultural technologies and value chains for rice production by establishing an Agro-processing industry		2,750,000 1 Agro-processing plant/ industry				An established rice agro-processing industry	Production reports	
Establishing livestock centres	Livestock development	Construct 4 livestock centres in Kalovya, Kanyelege, Chasato, and Chizimba		4,000,000 1 Kalovya	4,400,000 1 Kanyelege	4,600,000 1 Chasato	5,000,000 1 Chizimba	No. of constructed livestock centres	Livestock service reports	
Establishing livestock market centres	Agribusiness development	Construct 4 livestock market centres in Chifunda, Mapamba, Chikwa, and Tembwe		3,000,000 1 Chifunda	3,200,000 1 Mapamba	3,300,000 1 Chikwa	3,400,000 1 Tembwe	No. of livestock market centres established	Livestock market revenue reports	
Constructing slaughter facilities	Agribusiness development	Construct 2 livestock slaughter facilities (Less than 500 heads/day)		6,500,000 1 Kamphemba	7,000,000 1 Kaozi			No. of slaughter facilities constructed	Meat production reports, permit issuance reports	

Plant pasture for livestock grazing	Livestock development	Plant 40ha of pasture (10ha Farmer's training centre (FTC), 10ha Chasato, 10ha Kaozi, and 10ha Kanyebele) 1,500,000 per 10Ha		6,000,000 40ha FTC-10, Chasato-10, Kaozi-10, and Kanyebele-10				No. hectares of pasture planted	Land use land cover reports	
Construction of dip tanks	Livestock development	Construct 5 dip tanks 15 meters long, 7 meters wide, and 4 meters deep (FTC, Kanyebele, Chasato, Kalovya, and Kaozi)		2,100,000 1 FTC	2,100,000 1 Kanyebele	4,200,000 2 Chasato And Kalovya	2,300,000 1 Kaozi	No. of dip tanks constructed	Service delivery reports (Statistics of disinfection reports)	
SECTORS	TRANSPORT AND COMMUNICATION									
MAIN OBJECTIVE	DEVELOPMENT OF PUBLIC TRANSPORT AND COMMUNICATION INFRASTRUCTURE									
STRATEGIES	PROGRAMMES	PROJECTS	TARGET					OUTPUT INDICATOR	SOURCE OF INFORMATION	FREQUENCY
			2025	2026	2027	2028	2029			
To upgrade township roads to bituminous standard	Road development and maintenance	Reconnaissance, survey and mapping of road network Facilitate the upgrading of 15km of township roads to bituminous standard Facilitate construction of 3 Crossing points	2,200,000 2 -crossing point in Manthepa and Kalinkhu wards	40,000,000 5km road upgrade in Kamphemba 1,100,000 1 -crossing point in Chipala	40,000,000 5km road upgrade in Kamphemba	40,000,000 5km road upgrade in Kamphemba		No. of km of township roads upgraded to bituminous Standard No. of km of township roads surveyed No. of crossing points constructed	Progress reports	Monthly

Rehabilitate feeder roads to all-weather gravel standard		Facilitate upgrading of 10km of feeder roads to all-gravel standard	10,000,000 3km In Chisunga	7,000,000 3km In Mbazi	5,000,000 4km In Chibungwe			No. of km of feeder roads upgraded to gravel standard	Progress reports, certificate of completion	
Conduct feasibility studies and site analysis Public consultations and stakeholder engagement	Construction and infrastructure development	Facilitate the construction of modern bus station			1,200,000 1 Kamphemba			No. of bus station constructed	Revenue collection reports, certificate of completion, progress reports	
Upgrade the district airstrips	Aviation development	Facilitate the upgrading of 1no. Airstrip (1,300,000) Vegetation control around 3no. airstrips (50,000 per airstrip)	150,000 3 Airstrips vegetation control	1,300,000 Airstrip upgrade in Kamphemba				No. of airstrip upgraded 3no. Airstrip maintained	Activity reports,	
Construction of communication mast	Communication technology development	Facilitate the construction of 5no. Communication mast		4,000,000 2 Mazonde ward	4,000,000 2 Lundu	2,000,000 1 Chasato		No. of communication masts constructed	Certificate of completion	
SECTORS	EDUCATION, HEALTH AND SOCIAL SERVICES									
MAIN OBJECTIVE	ENHANCEMENT OF SOCIAL SERVICE DELIVERY									
STRATEGIES	PROGRAMMES	PROJECTS	TARGET					OUTPUT INDICATOR	SOURCE OF INFORMATION	FREQUENCY
			2025	2026	2027	2028	2029			
Constructing housing infrastructure	Public and social housing	Construction of 28 staff houses (Departments of Agriculture-3,	4,200,000 3-Agric 3-Vet	4,200,000 6-Education	5,600,000 8 Health	4,200,000 3- Forestry 3- Police	1,400,000 2- Immigration	No. of staff houses constructed	Certificates of completion	

		Veterinary-3, Education-6, Forestry-3, Health-8, Zambia Police-3, and Immigration-2) 700,000 per staff house								
Improve/upgrad e the settlement area	Settlement improvement	Improve/upgrad e Mtayachalo settlement	400,000 1 Mtayachalo					No. of settlement area upgraded	Upgrade completion report, occupancy licenses, title deeds	
Construction of dams	Infrastructure development and maintenance	Construction of two dams for water storage and irrigation	30,000,000 1 Mzande	30,000,000 1 Chasato				No. of Dams constructed	Certificate of completion	
Protecting well fields and local aquifers and drilling boreholes	Infrastructure development and maintenance	Protect 2 well fields, 25 local Aquifers, and drill 5 boreholes in the district	400,000 2 aquifers in Kamphemba protected	5,000,000 25 well fields 15 - C/North 10 - C/South protected	60,000 3 boreholes drilled	400,000 2 boreholes drilled		No. of well fields and aquifers protected No. of boreholes drilled	Certificates of completion, activity reports	
Construct mechanized water reticulation systems	Infrastructure development and maintenance	Construct 10 mechanized water systems within ten institutions in 5 years	750,000 3	500,000 2	500,000 2	750,000 3		No. of mechanized water systems constructed	Certificates of completion, activity reports	
Construction of public toilets in public institutions	Sanitation and hygiene promotion	Promote public sanitation by constructing 5 public toilets in 5 public institutions in the next 5 years	400,000 2	200,000 1	200,000 1	200,000 1		No. of public toilets constructed in public institutions	Certificates of completion, activity reports	

Construction of mini-hospitals	Increase access to quality health care	Construction of 3 mini-hospitals in Chikwa, Chibale, and Lundu	800,000 1 Chikwa	820,000 1 Chibale	850,000 1 Lundu			No. of mini-hospitals constructed	Certificates of completion, activity reports	
Construction of education facilities	Secondary education	Construct 3 secondary schools (1 in Chiri Zone, a Girls Boarding Secondary school in Kaozi, and a special needs secondary school in Kamphemba)		1,600,000 1 Chiri	1,630,000 1 Kaozi	1,670,000 1 Kamphemba		No. of secondary schools constructed	Completion certificates, progress reports	
Upgrade community schools to primary level	Primary education	Upgrade 5 community schools to primary level (Makeni, Kajimomo, Samamba, Mwanisiya, and Sambako)	1,500,000 3 Makeni, Kajimomo, and Samamba	1,050,000 2 Mwanisiya and Sambako				No. of community schools upgraded to primary level schools	Ministry appraisal report, certificate of completed of school upgrade	
Construction of classroom blocks (CRBs)	Enhance access to quality, equitable and inclusive education	Construction of 5 CRBs in the next 10 years		1,800,000 2	900,000 1	1,000,000 1	1,100,000 1	No. of classroom blocks constructed	Certificate of completion	
Establish ECE centres	Early childhood education	Establish ECE centres in all 149 primary and community schools by 2035	2,500,000 25	2,500,000 25	2,500,000 25	2,500,000 25	4,900,000 49	No. of ECE centres established	Certificate of completion of ECE centre establishment	
Establish recreational facilities	Infrastructure development	Establish recreational facilities in all 161	300,000 30	300,000 30	300,000 30	300,000 30	4,100,000 41	No. of recreational	Certificate of completion, Ministry	

		schools in the next 10 years						facilities established	assessment reports	
Extend water reticulation and supply network	Infrastructure development and maintenance	Connect 90% of households in the urban area to the water supply and reticulation network by 2035 (Current status 1088/2273 – 47%)	300,000 10% 227hh	312,000 10% 227hh	331,000 10% 277hh	380,000 13% 295hh		% of households connected to water supply in urban areas	Subscription reports and billing records	
Drilling, equipping and rehabilitation of boreholes	Infrastructure development and maintenance	Provide 50 waterpoints to 50 villages with clean and safe water by 2035	1,700,000 10 water points	1,700,000 10 water points	1,700,000 10 water points	1,700,000 10 water points	1,700,000 10 water points	No. of water points provided to 50 villages giving access to clean safe water	Certificates of completion	
Rehabilitate water storage tank	Infrastructure development and maintenance	Rehabilitate the old water storage tank	90,000 1 Kamphemba					No. rehabilitated water storage tanks	Certificate of completion, water storage reports	
Construct sewer pond and procure vacuum tanker	Sanitation and hygiene promotion	Construct 1 sewer pond and procure 1 vacuum tanker	1 Vacuum tanker procured	1 sewer pond constructed				No. of sewer ponds constructed and vacuum tankers procured	Certificate of completion, delivery notes	
Procure skip loader, skip bins, construct refuse bays, and have dumpsite approved by ZEMA	Solid waste management	Enhance solid waste management (Procure 1 skip loader, 50 skip bins, construct 2 refuse bays, and have dumpsite approved by ZEMA)	600,000 1 skip loader procured, 1 dumpsite approved by ZEMA 60,000 50 skip bins procured					No. of skip loaders and skip bins procured No. of refuse bays constructed No. of dumpsite	Delivery notes, certificate of completion, ZEMA letter of Approval	

								approved by ZEMA		
Assist vulnerable children and adolescents through caseload management	Child protection	Child protection program (children and adolescents assisted through community caseload management)	1 Annual caseload managed	1 Annual caseload managed	1 Annual caseload managed	1 Annual caseload managed	1 Annual caseload managed	No. of caseloads managed	Caseload management report

CONCLUSION

Aligned with the Urban and Regional Act of 2015, the Eastern Provincial Planning Authority, in collaboration with various government bodies, organizations, stakeholders, and district residents, has completed the Integrated Development Plan (IDP) for Chama District. This ten-year roadmap reflects a collective and extensive effort to guide the district's development.

Efforts to create this document began in 2019 but faced numerous setbacks. In 2022, the process gained renewed momentum after the passage of a council resolution, allowing the district to gather and record key issues from all 24 wards through thorough public consultations documented in the Planning Survey and Issues Report (PSIR). This groundwork informed the Development Framework, which outlined specific interventions to address the district's challenges. The framework then underwent a careful review to determine necessary resources, culminating in the Implementation Plan.

The IDP's preparation involved significant engagement with residents, government agencies, line ministries, and non-governmental organizations. Chama District acknowledges the dedication of all contributors and remains committed to achieving its vision: "An interlinked, socio-economically sound, and sustainable district by 2045."
